

Ecology as a Science

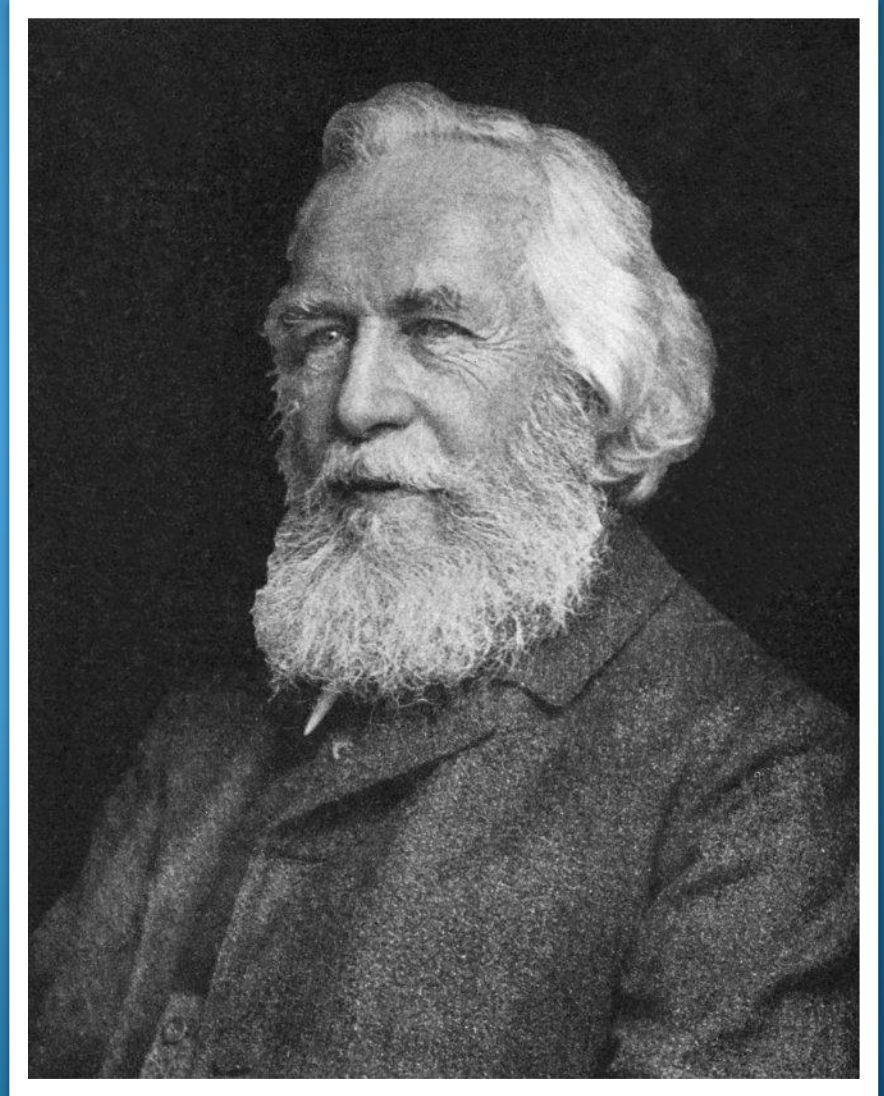

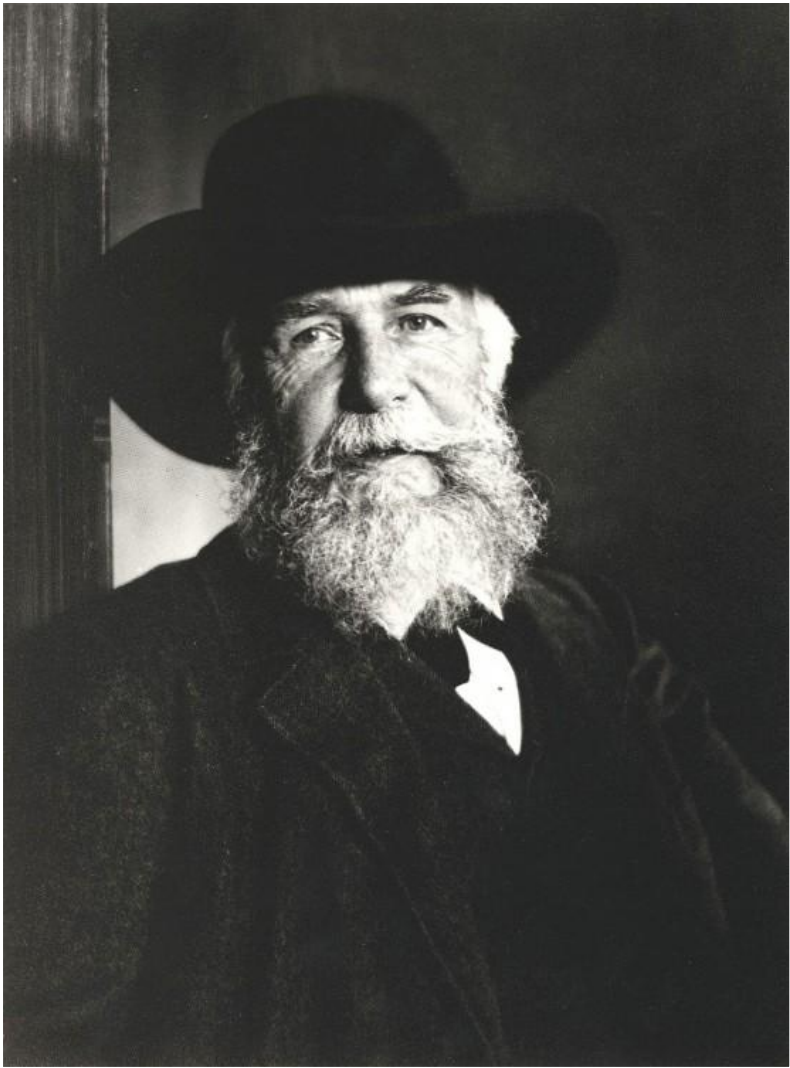

ГБПОУ ТК № 34
Вареник С.С.

Ecology is the science of studying the interaction of living organisms and their communities among themselves and with the environment.

The founder of ecology is considered a German biologist E. Haeckel (1834 - 1919), which for the first time in 1866 used the term "ecology".

In addition,

CONCLUSION

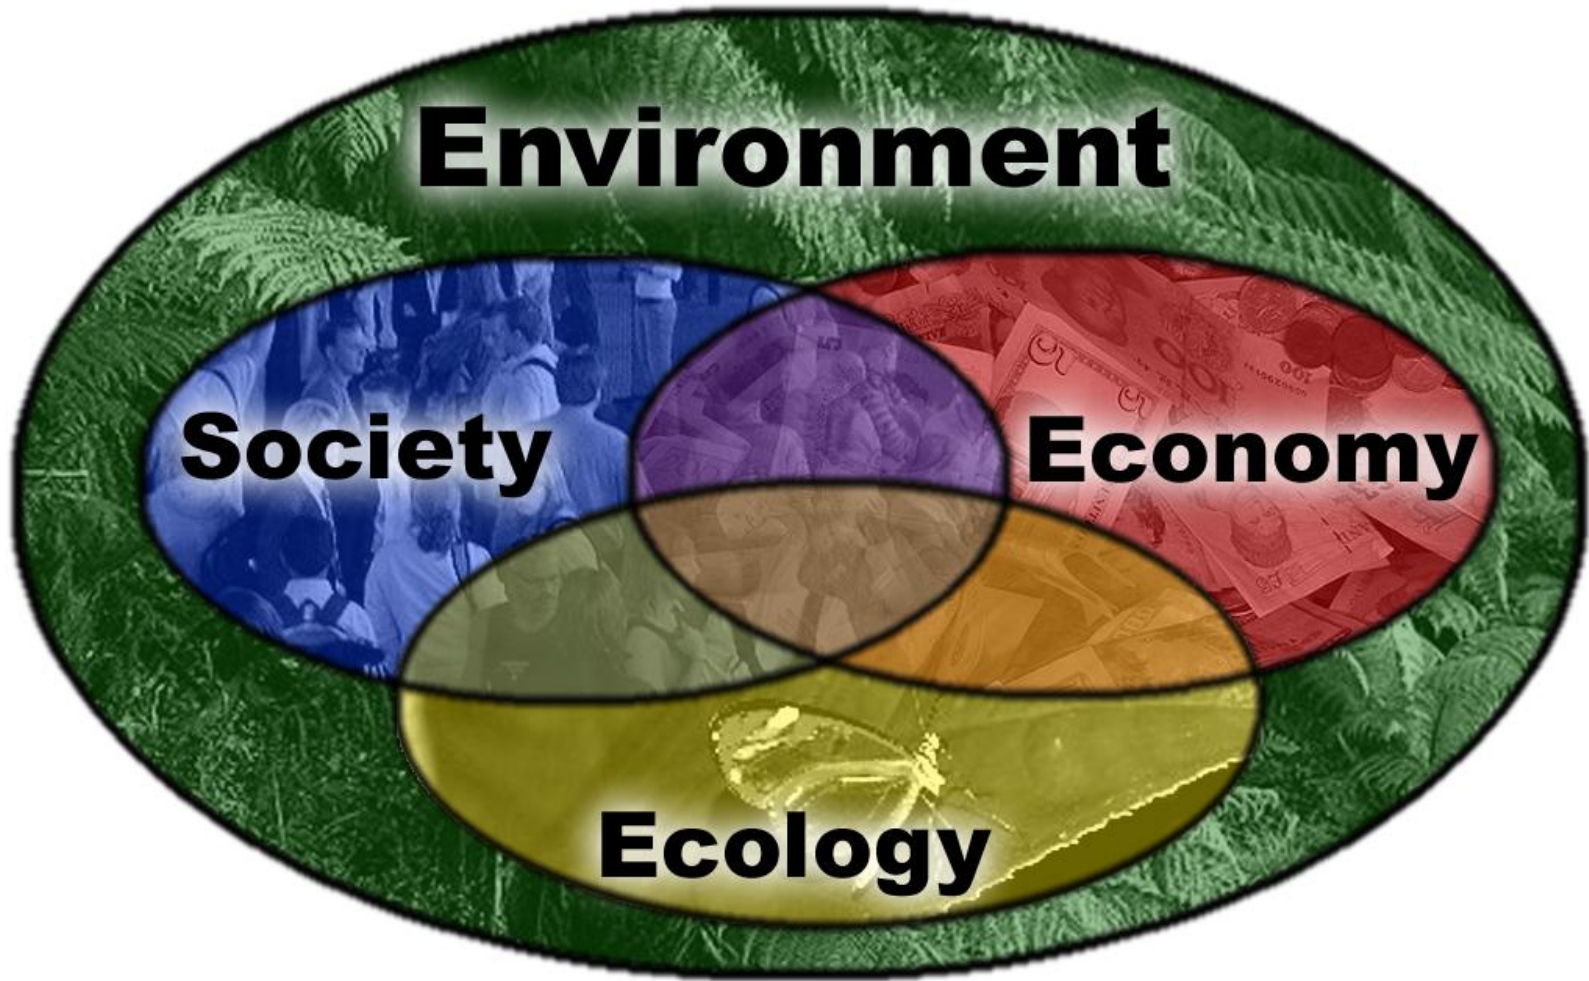

In conclusion,
To sum up:
In short,
In brief,
On the whole,
To summarize,
All things considered...
Taking everything into account...

Science

- The humanity never stopped on the way to unexplored places and even planets! We devised a satellite and made a rocket to travel to the moon and round the Earth. Special equipment lets us make photos of the faraway planets and study their environment.

Environment

Society

Economy

Ecology

The environment is the totality of components of the natural environment, natural, anthropogenic and natural-anthropogenic objects.

**The first problem is
environmental pollution.**

The second problem is global warming.

The third problem is overpopulation

Our planet is
our home.
Only by
understanding
this can we
save planet
Earth.

To save the environment, you need to make collective efforts, not because anyone in particular to blame for the pollution of the surrounding world.

- In conclusion, it must be said that if we want to live in a better and healthier world we should take great care of our mother nature and learn to protect it.

SAVE NATURE

The End

Save the Earth!
