Cancer

Curin

g

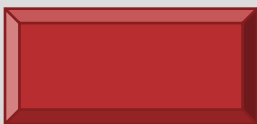

surgical
intervention

chemothera
py

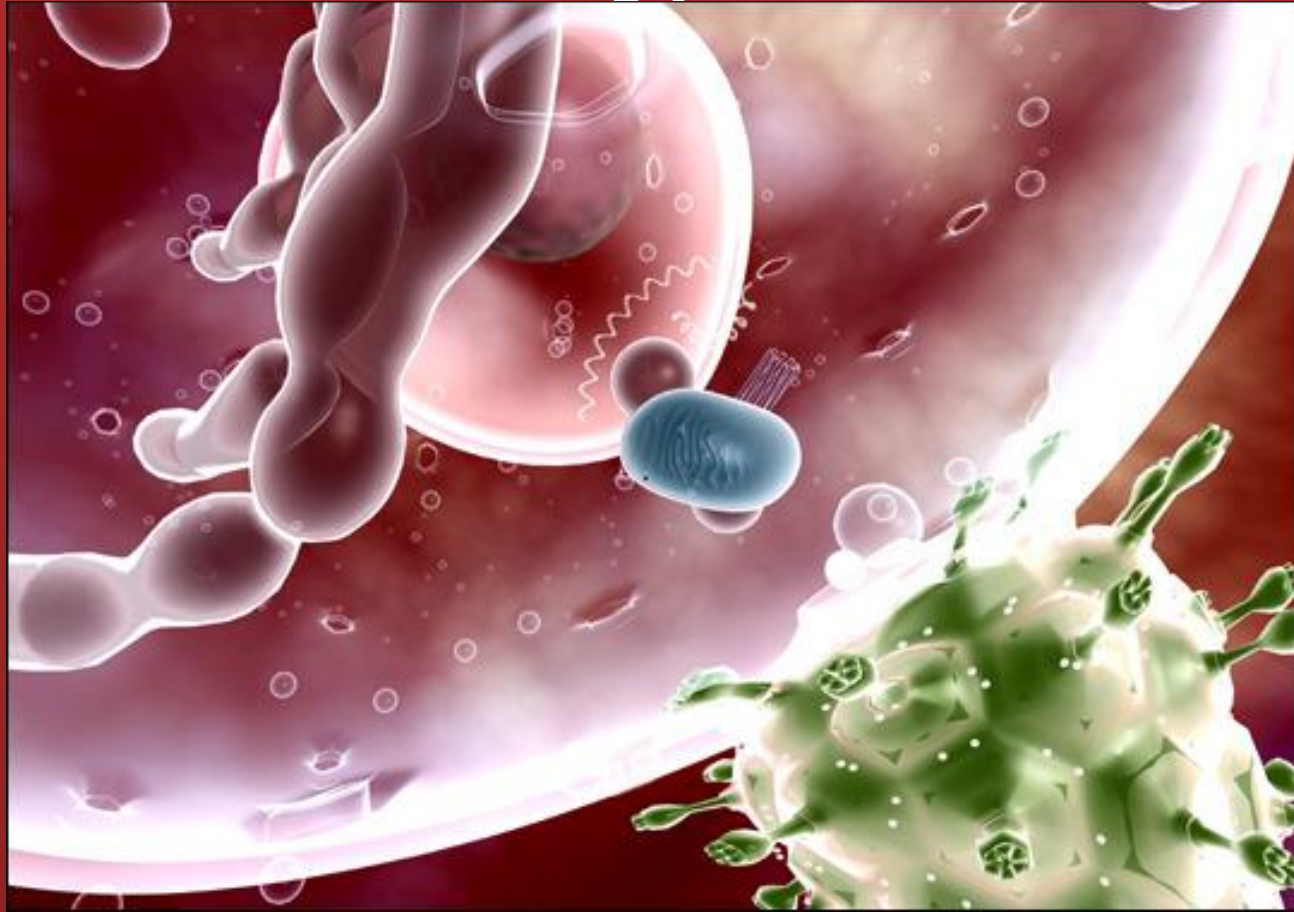

Radiotherap
y (gamma -
rays)

temporary
baldness

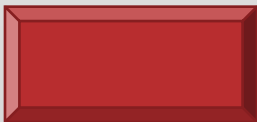

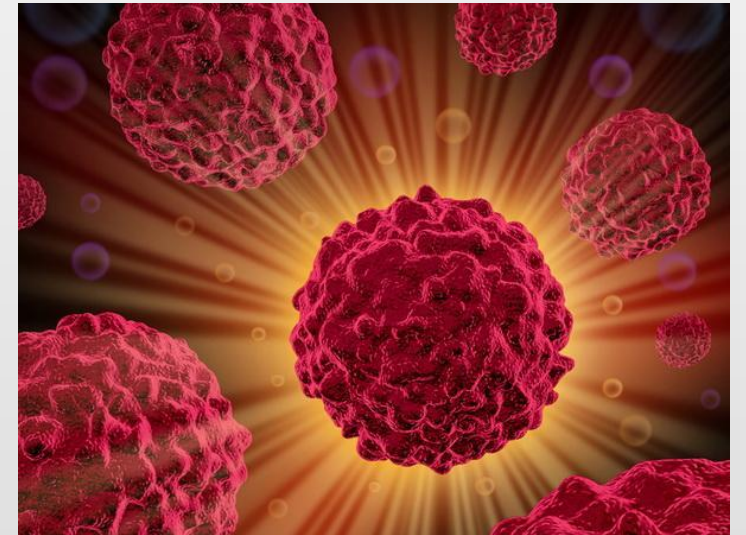

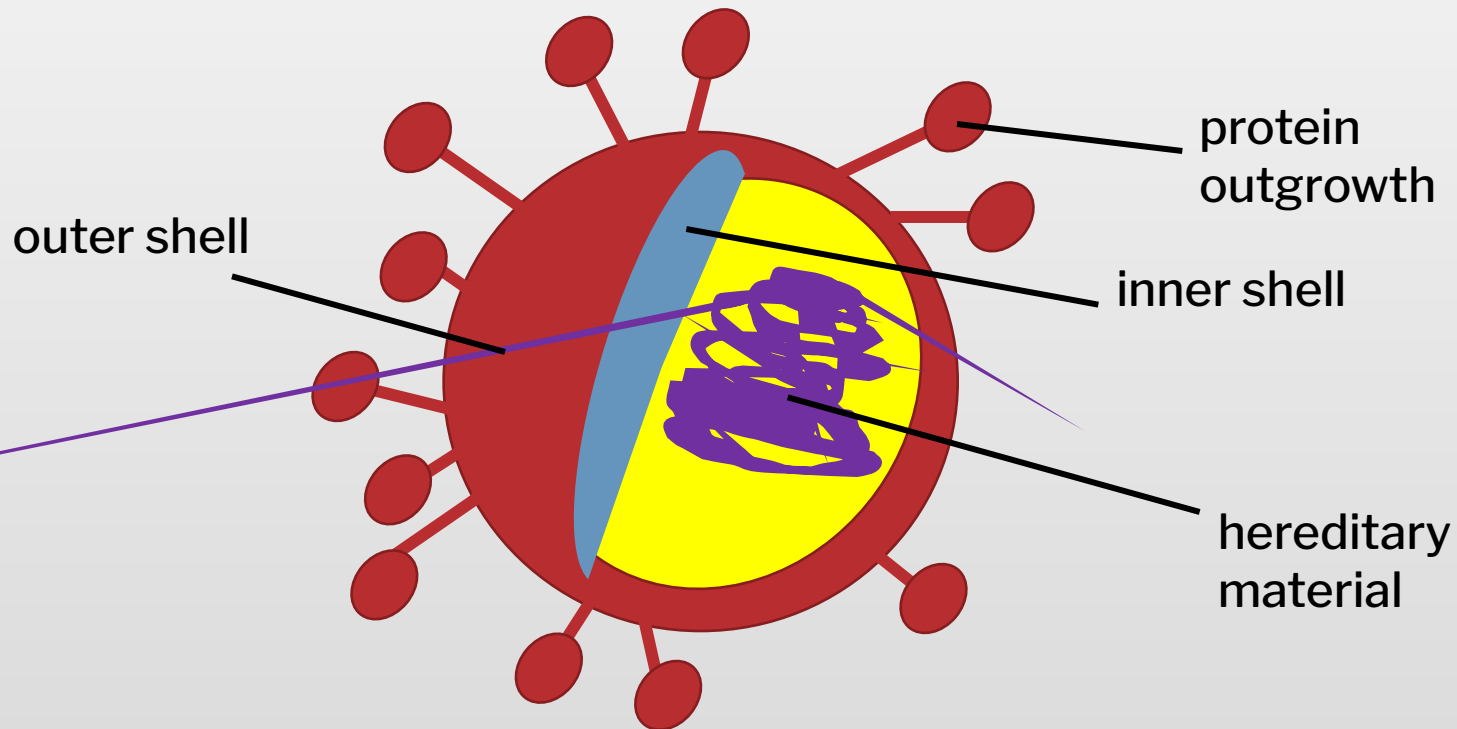

AID

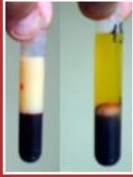

AIDS

- It is abbreviated name of Acquired Immune Deficiency Syndrome. This disease is «activated» by special virus HIV.

Blood

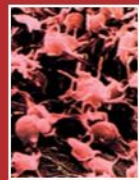

plasma

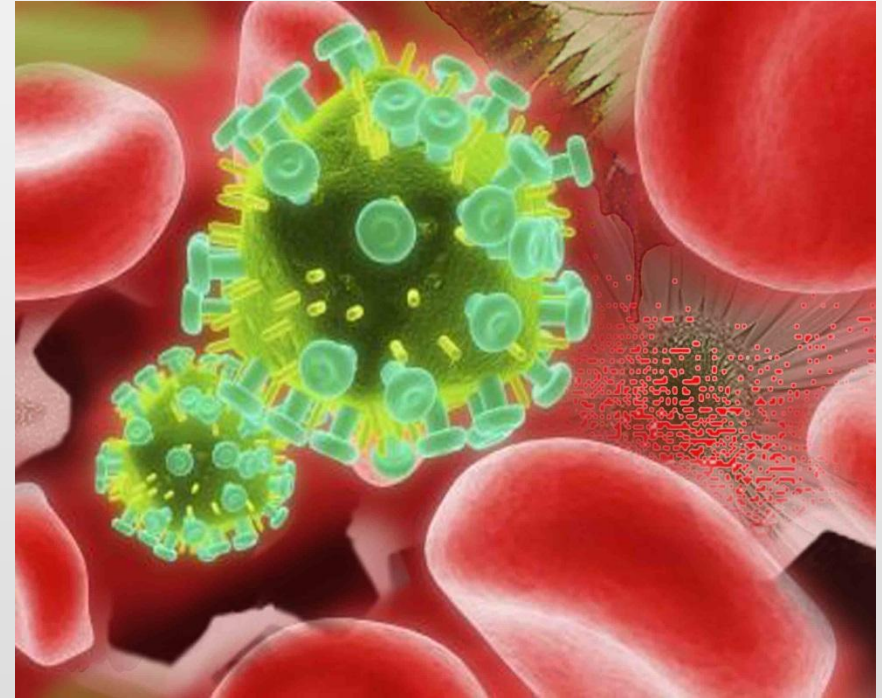

erythrocytes

leukocytes

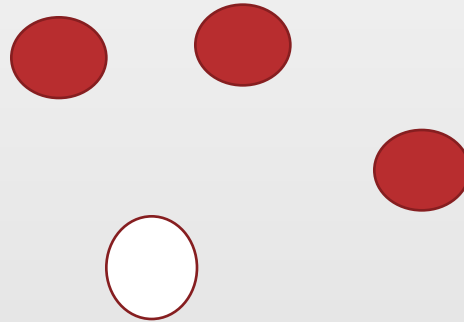

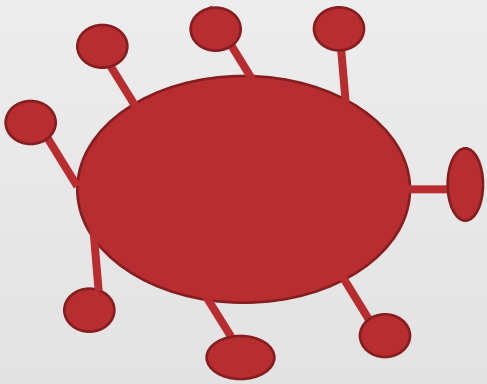

platelets

HIV lives in blood

- This virus affect the leukocytes, destroying it and as a result - weakened immunity. Then it multiplies and all this cycle continues.

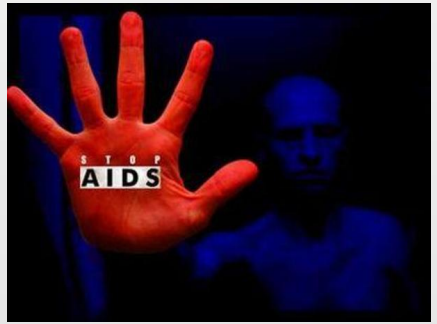

AIDS

with the introduction of drugs (narcotics) by 1 syringe to several people, if one of them is ill

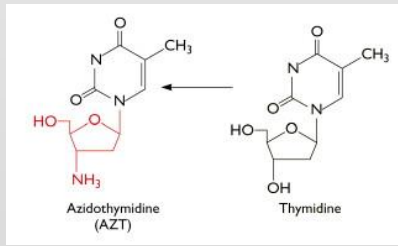

AIDS can not be infected by breathing the same air with the patient or touching him

blood transfusion from an infected patient

drug AZT (azidothymidine) only stops the virus

there isnt drug against AIDS
