Mother – and - the stepmother

Мать – и - мачеха

Mother – and - the stepmother

Мать – и - мачеха

Coltsfoot ordinary - a small perennial grassy plant. Blossoms in the early spring before emergence of leaves. Floriferous scaly stalks come to an end with a golden-yellow basket. Radical leaves appear when coltsfoot fades and reach full development by the beginning of June. They are dense, roundish, from below soft and warm, and from above firm and cold. From here and the name of this herb - coltsfoot (one heats, another cools). Coltsfoot grows in Russia across all her territory on ravines, breaks, clay slopes. In medicine use coltsfoot inflorescences which prepare during blossoming. They need to be dried quickly. In the first half of summer prepare also leaves. Broth of leaves of coltsfoot ordinary is used in modern medicine as expectorant cure and also as the anti-inflammatory and softening medicine for a disease of respiratory bodies. Leaves of this plant are a part of chest and sudorific teas which are on sale in drugstores. Tea from flowers of coltsfoot get rid of sore throat, cough, a hoarseness and hoarseness of a voice. Broth from equal shares of leaves of coltsfoot and a nettle is applied to washing of the head at a hair loss and plentiful dandruff. The juice which is squeezed out of a fresh plant is considered wound healing.
