# My hero is Elon Mask

# biography

The whole biography and the success story of Elon Musk is built on the principles of humanism to the environment, the convenience and prospects for the survival of mankind.

Thanks to his scientific and financial efforts, a fantastic future is approaching us every year.

# Description

Canadian-American inventor, engineer, entrepreneur and investor Elon Mask is not only the real image of Tony Stark from the movie "Iron Man".

This ingenious inventor and leader managed to bring the fantastic future closer and accelerate the path to it.

Elon Mask was a founder of the well-known Paypal service

By 2040, according to Musk, solar energy will give up to 40% of all electricity in the world.

The entrepreneur plans to establish a "non-waste production" - to send worn-out car batteries to power plants.

The fact is that even a battery worn out by 30% is already unsuitable for use in an electric car, and at a power plant it can last many years.

Elon Mask is the creator of the first electronic cars

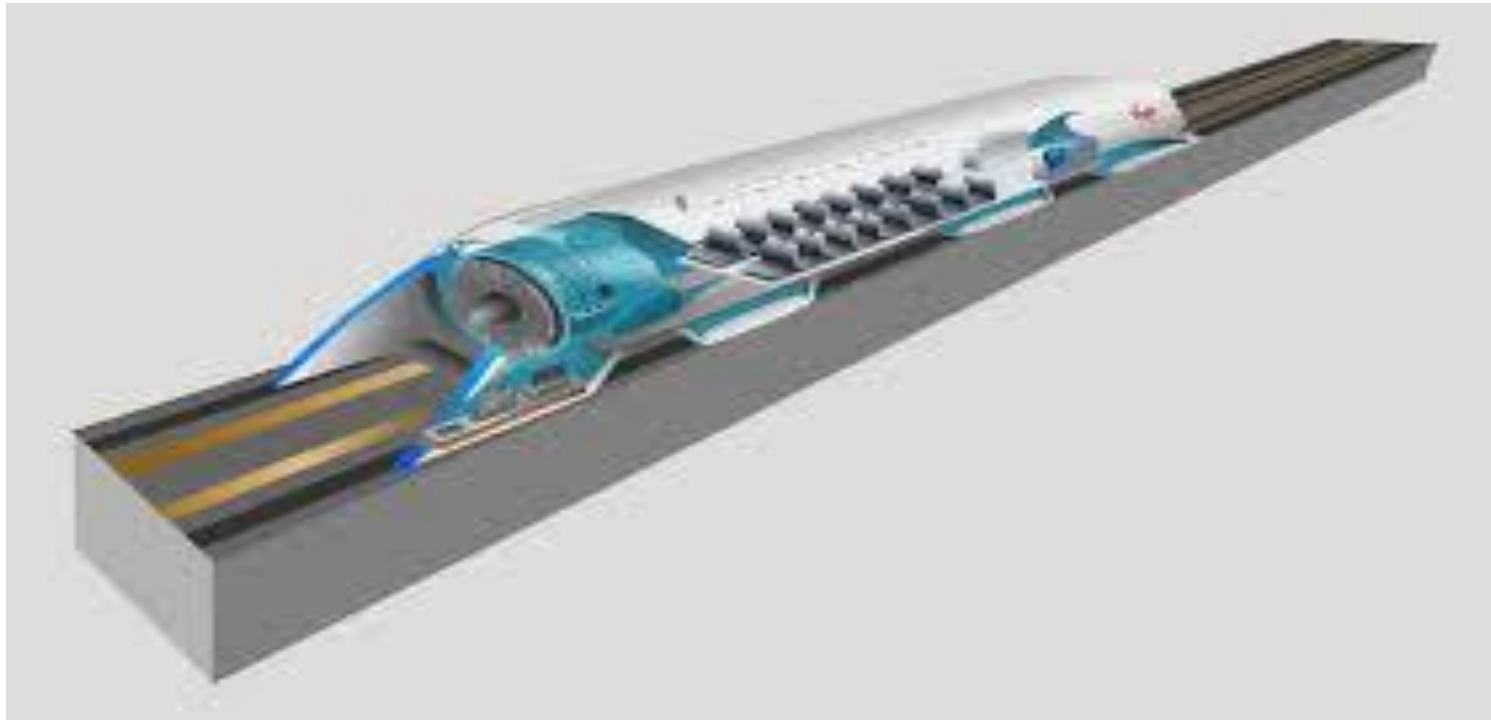

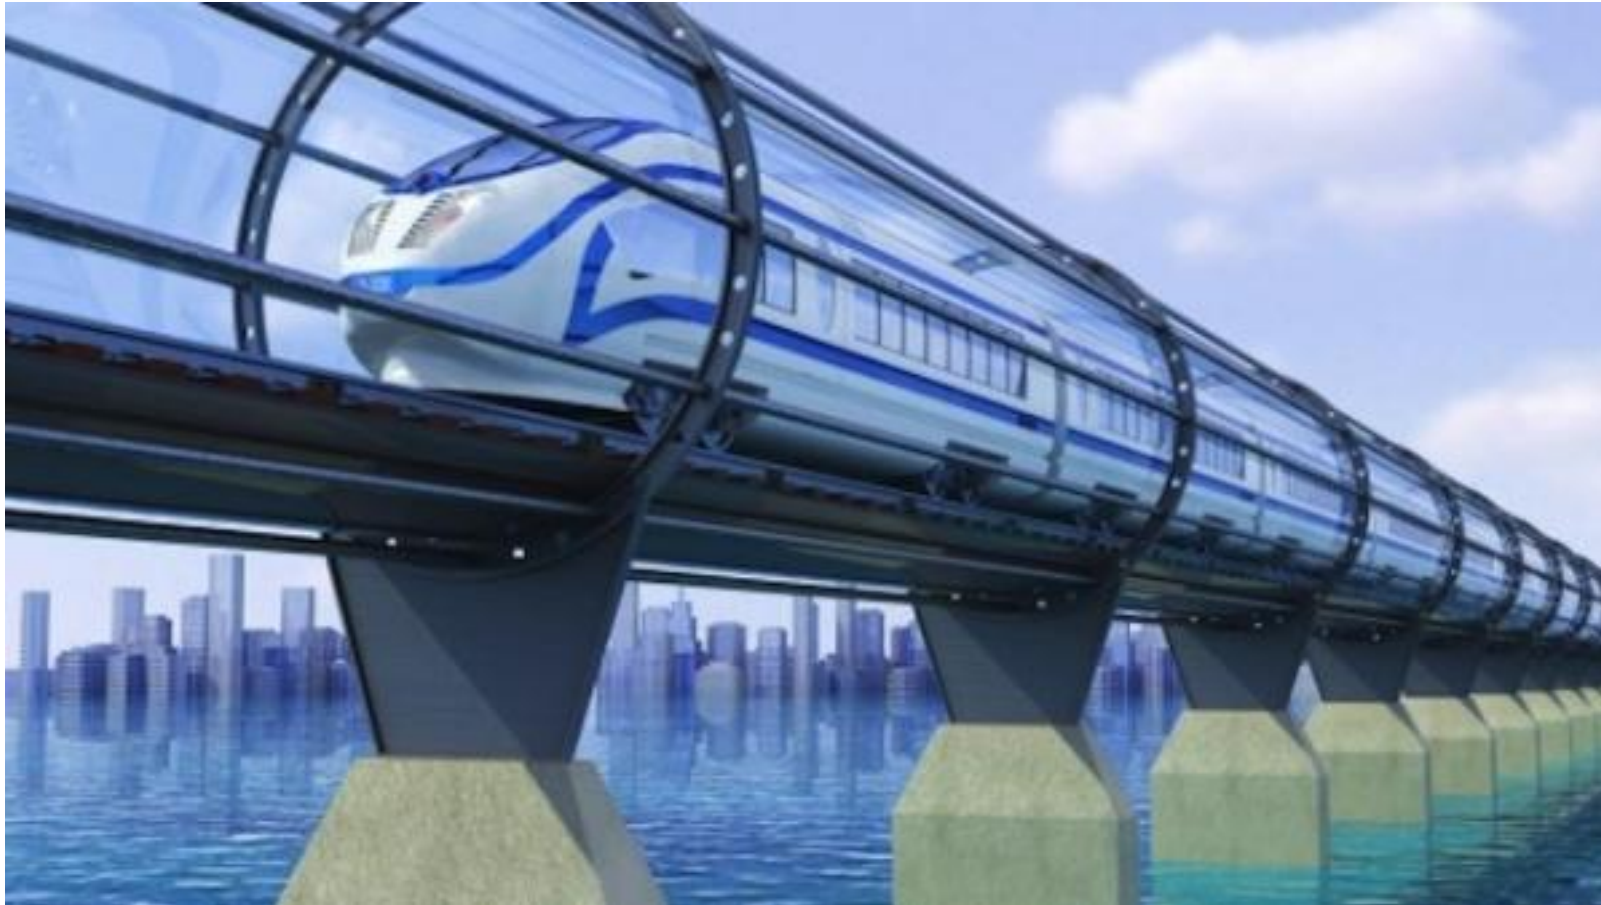

In 2012, Elon Musk, in addition to announcing its plans for space exploration, announced another project - high-speed pipeline passenger transport Hyperloop.

The idea is similar to the capsule, in which large offices deliver documents to other departments - just the size of human growth.

In one such capsule should fit 28 people.

# Hyperloop

# *Future*

Elon Musk is an example for me because he is the person who aspires to change people's life for the better.

He actively develops solar energy and actively creates cars that will work at the expense of solar energy.

This will significantly change the amount of emissions of harmful gases into the atmosphere.

Elon Musk set the goal of colonizing the new planet real and making reusable rockets a reality.

Elon Mask is a great and terrific person who strives to make the world a better place
