

***ECOLOGY
OF OUR
TULA
REGION***

Ecology. What does this
word mean?

It is of Greek origin and consists of two parts: oikos(house or Motherland) and logos(teaching)

This is science, studying the connection of organisms with the environment and man's influence on it.

Everyone knows that we have highly developed industries, such as metallurgy, machinmaking and gunmaking, light and chemical industries.

Kosogorsky Metallurgical Plant.

The plants, such as
“Tulachermet”, “Tulamashzavod”, “Himvolokno”, “Shchokinoazot”
influence air and water in our area

Shchokinoazot.

Tulachermet.

And a lot of citizens of our region pollute the banks of basins, forests, groves, parks, leaving rubbish and varios wastes there.

But there are other people, those who want their native city to be clean and beautiful.

Besides there are special organizations and funds, that fight for ecology and do their best to keep our environment clean.

One of the organizations called “Green” arrange subbotniks for people, who plant trees, bushes and flowers.

Another one, known as “Ecology” tries to solve the problems of clean air and clean water, which are so necessary for our health.
