

Cheetah

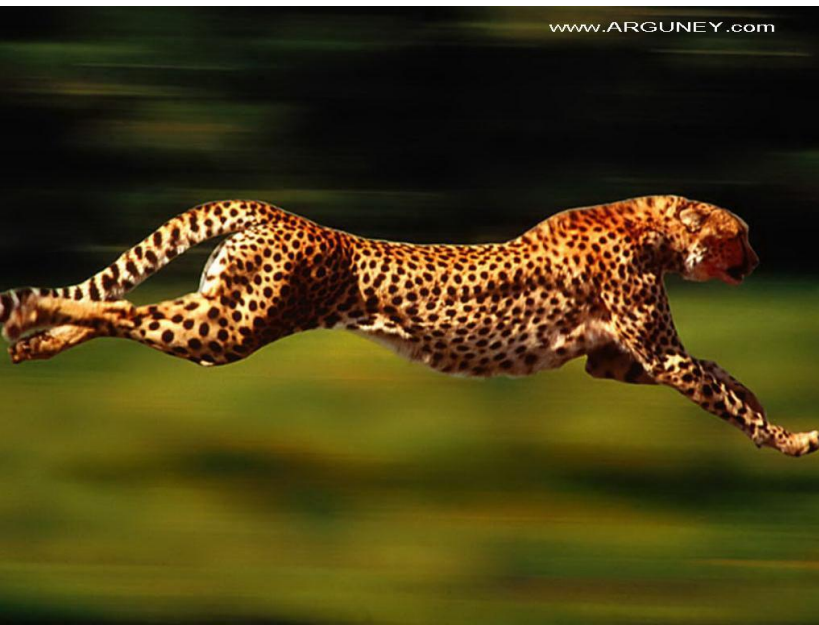

Kate Garntseva

Cheetah is the fastest animal.

Cheetahs live up to 20 years. But sometimes up to 25 years.

Cheetahs hunt usually in the early morning or late evening when it is not very hot. Unlike other cats, cheetahs hunt, chasing prey. Just cheetah is able to quickly change the direction of running. Race rarely lasts more than a minute.

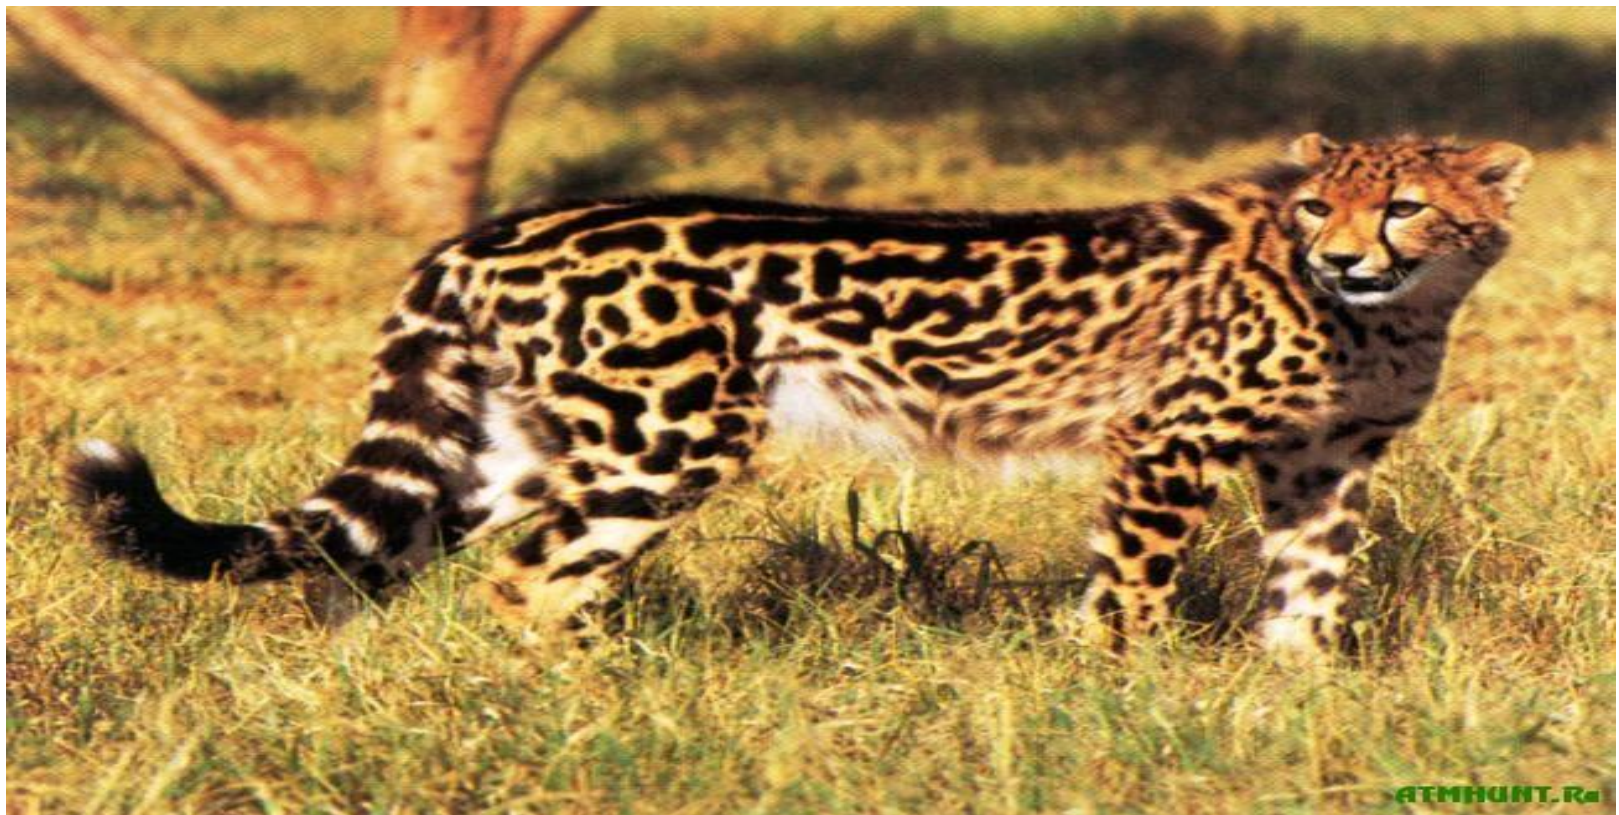

Cheetahs are found in Africa and in India, the Near East and Central Asia. At present, the Asiatic cheetah has virtually disappeared.

King Cheetah is a rare mutation, which differs from the usual cheetah coloring.
