

# Ecological problems of our planet

And how we  
can solve  
these problems.

Forest cutting

- Annually about 15 billion trees are cut down.

## Aftereffect

Destruction of forests leads to cardinal temperature changes and the speed of the winds.

## What can people do to save forests

Rational and economical using of paper products, buying recycled products, greening the area around their homes

Reduction of biodiversity

- Annually 10-15 thousand varieties of organisms disappear

## Aftermath

The less the planet's biodiversity, the worse the conditions of survival in it.

What people can do to  
save plants and animals

Cleaning up the environment and restore natural ecosystems, limit the hunting of rare species, creation of protected areas.

**Water pollution**

Most of the water resources on Earth is polluted.

## Aftermath

The share of fresh water, fit for consumption accounts for only 3% of the total. Despite this, people in their work mercilessly pollute it. All of these threatens a lack of fresh water for a large number of people. And, as a consequence, the increase in the number of deaths from thirst.

What people can do to prevent water pollution

Water pollution is a serious problem for humanity, but there are many ways to solve it: to learn the careful attitude to natural resources, to create a more perfect cleansing water mechanisms, to implement zero-discharge technology in industry, reuse of treated waste water

**Waste**

In nature annually more than 50 billion tons of waste

## Aftermath

The negative impact of waste manifested in increased morbidity, deterioration of their living conditions, reduced productivity of natural resources.

What people can do in order not to pollute the planet

To reduce the amount of garbage, we can recycle the waste and produce secondary raw materials, suitable for subsequent use in industry. Very effective to collect used paper products to the recycling plant.

We have only one planet! But she dies because of us. We strip her, pollute and destroy. Think again! It's our home and we're here to live! We must care of our planet.

Let's save our  
planet  
together!
