Drawing in 3D

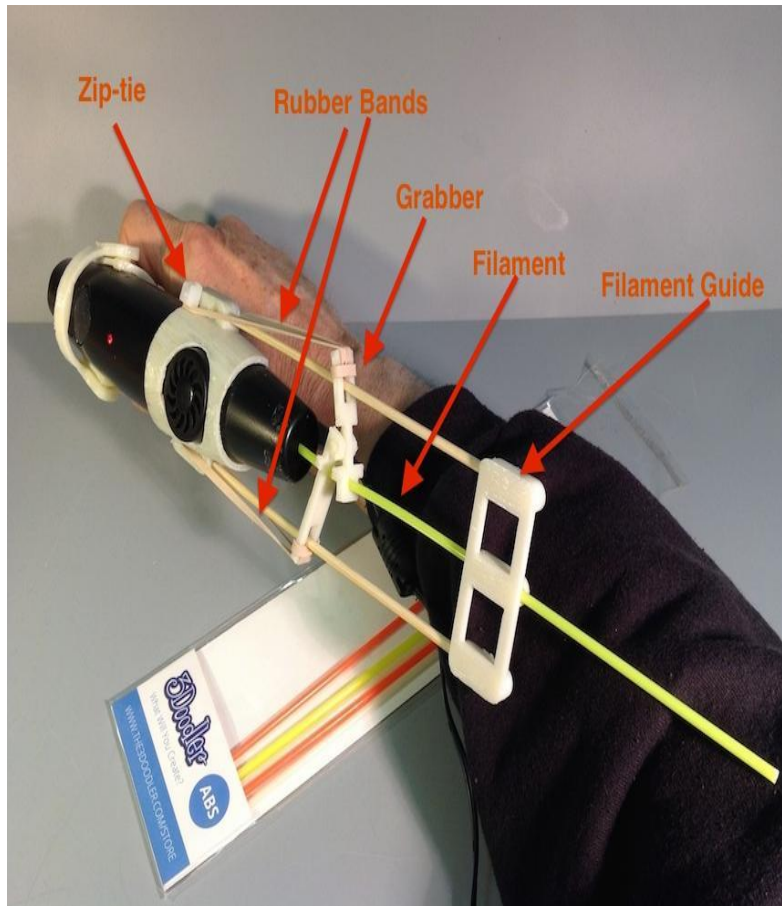

Have you ever dreamed of drawing in 3D or drawing things in the air? Well, now you **can** do it with the help of 3D pen! The 3Doodler has been described as a glue gun for 3D printing.

What is 3Doodler?

3Doodler is the world's first and only 3D Printing Pen that draws in the air or surfaces. It's compact and easy to use, and requires no software or computers. You just plug it into a power socket and can start drawing anything within

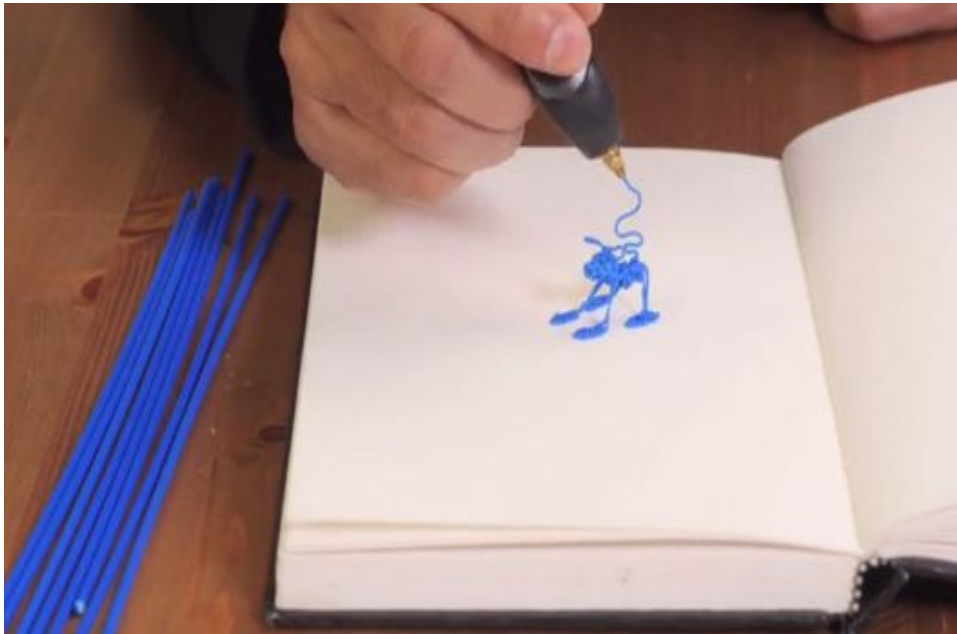

How to use 3Doodler

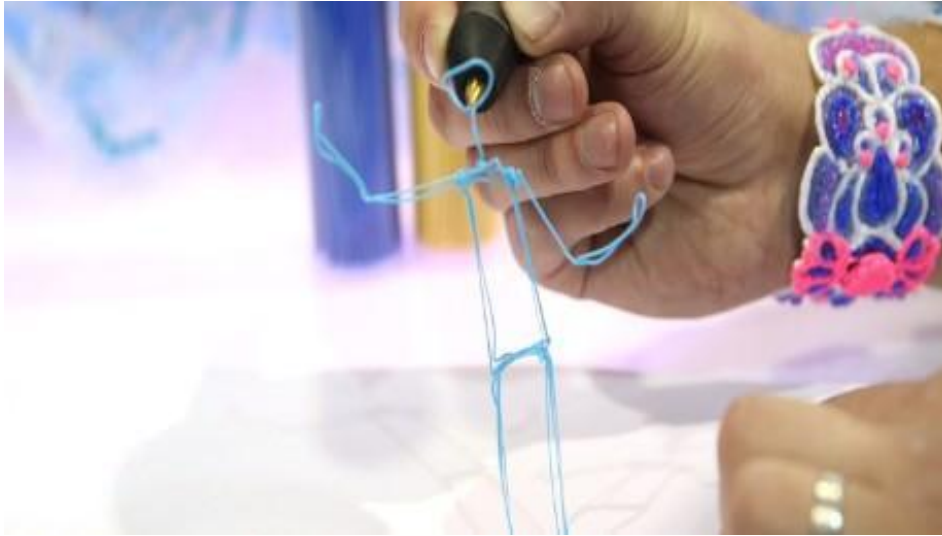

- As 3Doodler draws, it extrudes heated plastic, which quickly cools and solidifies into a strong stable structure. 3Doodler is a brand new way of creating objects and artistic works. 3Doodler **is not** a toy for children (it's recommended for *ages 12+*). While the plastic extruded from 3Doodler is safe to touch once it has left the pen, the pen itself has a metal tip that can get as hot as 270C.

USING 3DOODLER

- There are many ways 3Doodler can be used. 3Doodles can be created as flat forms and peeled off a piece of paper, as freestyle 3D objects, or in separate parts, ready to be joined together using the 3Doodler. 3D pen's creative opportunities are endless.

- 3Doodler works on almost any surface, including plastic, allowing users to personalize items such as iPhone cases, or anything else they feel like 3Doodling on.

3Doodler

So 3Doodler is a pen that can draw in the air!
3Doodler is the 3D printing pen you can hold in your hand. Lift your imagination off the page!
