What are the halves of the brain called? What are their talents? What are they responsible for? Can you use only one part?

P.70 ex. 2a

Reading

2a Read the article and choose the best title.

- A Use your head
- B Which half of your brain works?
- C Can you change?

Our brain is like a computer system with two halves — hemispheres. Each half has its own way of knowing and understanding the world around us.

The two hemispheres can co-operate, with each part showing its special talent. At other times each part may work alone, with one half "on", and the other "off". Usually individuals prefer one side. For example, left-brain people follow recipes exactly, while right-brain people like to use their creativity in the kitchen and add some strange ingredients.

Brain preference does not usually change in people but it is possible to develop skills in both hemispheres. You need both sides of the brain because this helps you to solve problems more easily and you may cope better in different life situations.
