

PROTECTION OF ANIMALS

Precious species of animals are on the brink of survival

Giant panda

Most of the panda is an endangered species with an ever-decreasing size of population and low birthrate, both in the wild and in captivity. Scientists suggest that in the wild there are about 1600 species.

Tiger

All tiger subspecies put together currently amount to around 3,200 endangered tigers remaining in the wild.

Asian elephant

Today many elephants are dying because they don't have enough to eat or to drink and they don't have enough space to live in. Only 2 million elephants live on the planet today.

Blue whale

The average length of a blue whale is 23-27 metres and its weight range is between 100 and 150 tons.

it is now an endangered species, because of pollution, over-hunting, and other causes such as global warming.

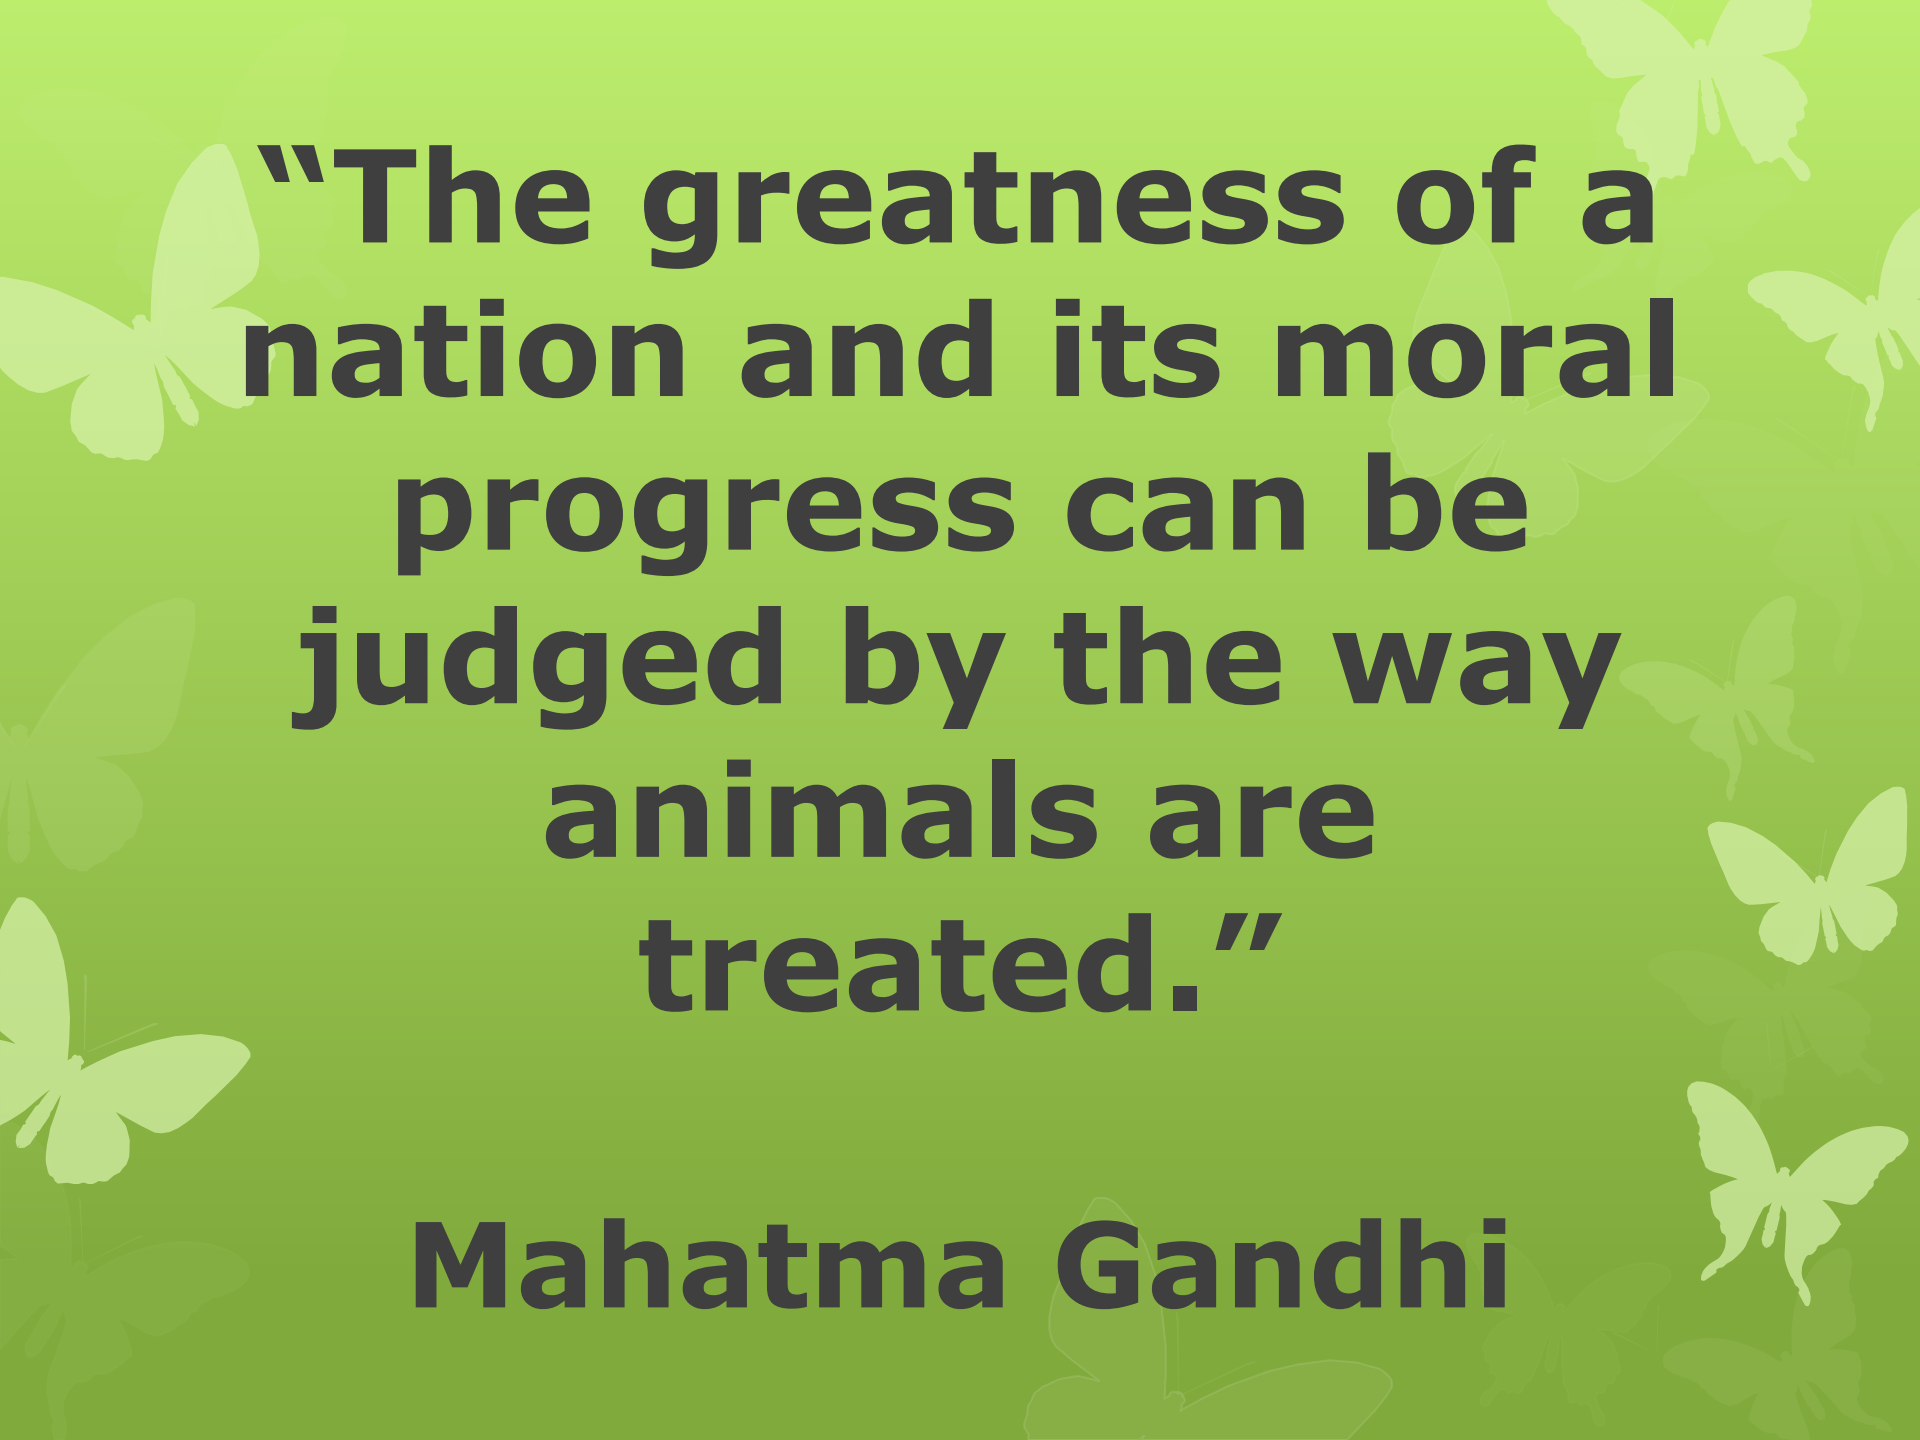

Polar bear

Researches estimate that there are between 22 000 and 40 000 polar bears in the world. Close to half of the polar bear population lives in Canada.

Man made pollution is a cause of death for polar bears.

Polar bears can swim up to 100 miles (161 kilometres at a time). Polar Bears do not hibernate.

“The greatness of a nation and its moral progress can be judged by the way animals are treated.”

Mahatma Gandhi

Help these rare animals to survive!!!
