

THE RECYCLING PLANT IN SOCHI

**The recycling plant was built in 2011.
It is the first recycling centre of solid household wastes in Russia.**

**200 000 tons of rubbish
are sorted in Sochi
every year.**

**Glass, plastic, paper,
aluminium cans can be
recycled.**

**11% of rubbish are
recycled.**

**80% of organic wastes
are recycled in
compost.**

**The rest substances
are pressed.**

Aluminium cans are pressed, then they are sold, because they are the most expensive rubbish.

The recycling plant is an important part of the Olympic Games. We want to keep the city clean and green.

THANK YOU.
