Computer-literacy

Russians have a computer not worse than Europeans!

- More than three quarters (78%) of EU citizens aged 15 to 69 years old use the computer, say analysts Eurostat in a new report, posted on the official website of the office.
- The relevant statistics are not available in Russia, but according to the head of the telecommunications Ministry Igor Schegolev, by the end of 2011 in the country there were 74.4 million computers and 70 million Internet users. That is, with computers had to deal with about 70% of population of working age (Rosstat)

SOCIAL PROJECT «COMPUTER LITERACY IN EVERYDAY LIFE» AND ITS IMPORTANCE FOR THE MUNICIPALITY

Internet has already become an integral part of our life and an indispensable means of communication. However, not all know how to use all the advantages of Internet technology. Older people, for example, is far from all these social networks, email, and other attributes on-line world.

Especially singles, Mature very require not only training modern communication technologies, but also in communication, as the living, and virtual. "Young" pensioners who have just retired, it was often very difficult to change and adapt to the new rhythm blank daily work life.

The reasons on which it is necessary to know computer literacy

1. Communicate
2. Information
3. Solve problems
4. Entertainment
5. job

- Conclusion

With the entrance of humankind in the 21st century, an integral part of our life became information technology. Now the computer knowledge is a very important part of life, such as "to conduct an electronic payment, you must have a certain set of computer knowledge".

At the device for work, the employer is interested in the skill of communication with the computer.

Computer literacy is an integral part of our life, work, and society today's computerized world.

Thank you for your attention!
