

Animals in danger

Many animals and birds on the Earth are disappearing. Many of them are old and sick animals.

Modern life is bad for them. The air isn't fresh. The water is not clean. They don't often have good things to eat and space to live. You can find a lot of names in the Red book. People must take special care of them all. Don't forget.

Animals play important role in human life

The habitat problem

THERE IS A SERIOUS HABITAT

PROBLEM BECAUSE:

- ❑ After pollution or destruction, habitats take a hundred or even a thousand years to grow again.
- ❑ Pollution and destruction change the balance of nature. Each species in its habitat needs and helps the rest.
- ❑ If one animal, a bird or an insect disappears, all the others suffer, too.

Habitats and animals are disappearing

- The rainforests of South America, Africa and Asia are getting thinner.
- Habitats and animals are disappearing in Europe, too. For example 95% of the meadows and 50% of the woods and marshes have disappeared in Britain since 1947.

The hunting problem

- ▣ Man has always been a hunter. Hunting is a crime. Many modern hunters don't just kill for food - they kill for profit or for fashion.

People must stop the trade of fur. It's wrong to keep wild animals in cages and catch them in traps.

The Siberian tiger

It is very beautiful and dangerous

The Amour tiger

- ▣ The Siberian tiger is also known as the Amour tiger, Manchurian tiger. It is written in the Red book. In 1996 there were about 450 tigers.

One of the biggest beasts of prey.

- ▣ The Siberian tiger is a big animal, it has exotic colour, it is one of the biggest beasts of prey of our planet.
- ▣ It's length is about 3m
- ▣ It's mass is about 350 kg
- ▣ It runs at a speed of 50 km/h

The Siberian tiger doesn't attack people itself.

Tigers can kill cows, sheep and other domestic animals and sometimes they can also kill men. Some people are afraid of tigers and kill them to save their domestic animals and their lives.

The results are very sad.

- But some people often hunt tigers for fun and for their beautiful skin. They can easily sell the skin and get a lot of money as the prices are high. Most tigers don't hunt people nowadays, but hide from them in deep, dark forests. They rather hid there earlier, because there aren't many forests for tigers nowadays. People have cut down many trees.

A habitat area of polar bears:

The polar bear is one of the biggest beasts of prey in the world, too. Polar bears inhabit the territories within the Arctic Region, the Arctic Ocean and bordering seas.

The Polar bears are well adapted for cold temperatures, for moving across snow, ice, and open water, and for hunting the seals which make up most of their diet. The adult males weigh around 350- 680 kg, the adult females are about half the size.

Most polar bears are born on land but they spend most of their time at sea hunting from sea ice.

The population of polar bears is constantly decreasing because people are hunting them without proper control.

The melting of sea ice reduces the areas where animals can find food.

The scientists say that under such conditions polar bears can disappear within 100 years.

The polar bear was listed as a threatened species in 2008.

You can see this beautiful animal in the Moscow zoo!

My dream

Many things are written about animals. Now listen to the poem “My dream” by Gillian Brown.

I love all kinds of animals
Dogs and cats and rabbits,
I love all kinds of animals
Despite their little habits.
If I had tons of money,
Do you know what I would do?
I would buy lots of animals
And have my own zoo.
But they wouldn't be in cages
They would be free to run around.
And there's one thing they would feel
And that is safe and sound.

At the zoo

The dream is author's own zoo. A zoo is the place, usually in the city, where many kinds of animals are kept so that people can go to look at them.

The dodo

- ▣ The dodo was a large bird which used to live on the island of Mauritius in the Indian Ocean. It built a nest on the ground and laid one egg in it.

Nobody lived on the island 400 years ago. In the 17th century explorers from Europe visited the island and decided to

Unfortunately,

in less than
100 years
the dodo
was extinct.

The problem under discussion is very actual up-to-days.

- ▣ The problem under discussion is very actual up-to-days. With the development of civilization man's interference in nature grows up. Pollution and destruction change the balance of nature. The rear wild animals, also, are constantly killed.
- ▣ We would like to remind people about it and prevent the different negative factors.

The main questions of our project.

- ▣ We discussed and thought all ways to help animals. We formalized our researching results and tried to answer the questions of our project: “Have the rear animals got a future?” and “How will we be saving their lives?”

The solution:

THERE IS ONLY ONE WAY
PROTECTING ANIMALS

AND BIRDS IN DANGER BY LAW

- ▣ To open more national parks
- ▣ To build new roads according to a natural-saving technology
- ▣ To build and save main roads and trunk-lines both for people and animals
- ▣ To plant more new forests
- ▣ To cut pollution
- ▣ To use natural resources more rationally
- ▣ To stop nuclear tests

We must love them and if eve we see someone hitting them or making them go through a lot of agony we must try to prevent it.

Если бы мне предложили
вечность без тебя,
я бы выбрал миг, но с тобой..

Thanks for your watching!
