

A city skyline at dusk with a bright sunburst effect in the sky. The sun is positioned in the upper center, creating a strong lens flare that radiates across the sky. The city buildings are silhouetted against the darkening sky, with some lights beginning to glow. The foreground shows a body of water reflecting the city lights and the sun's glow.

# The Environmental Pollution

Ecology is a science which studies the relationship between all forms of life on our planet with its environment.

Earth is polluted with  
all kind of  
technological,  
agricultural,  
chemical, nuclear and  
other wastes.

Polluted air, land and water are harmful to plants, animals and people.

**Polluted!**

**Environmental problems today is air pollution, smog, water pollution, destruction of natural resources.**

AIR

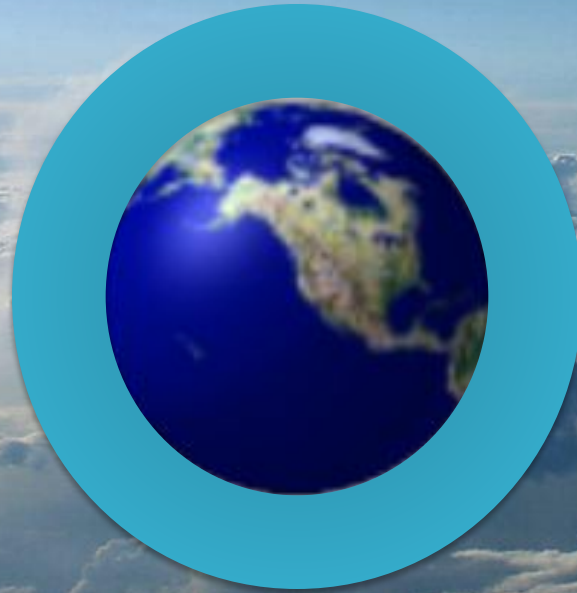

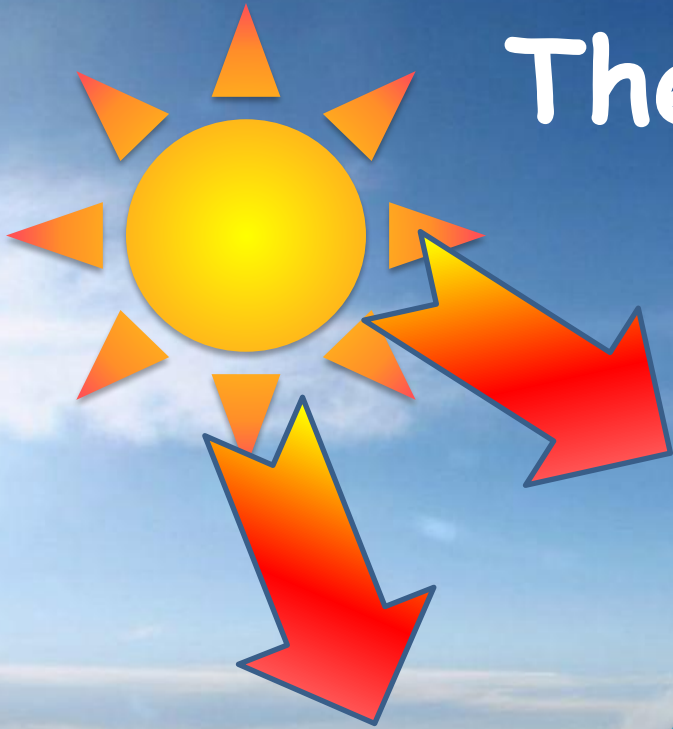

Polluted air can cause illness and even death.

*Earth*

The ozone layer in the upper atmosphere protects the world from sun's harmful rays.

The chemical used widely in aerosol cans, refrigerators and other products are destroying this precious layer.

**Dangerous!**

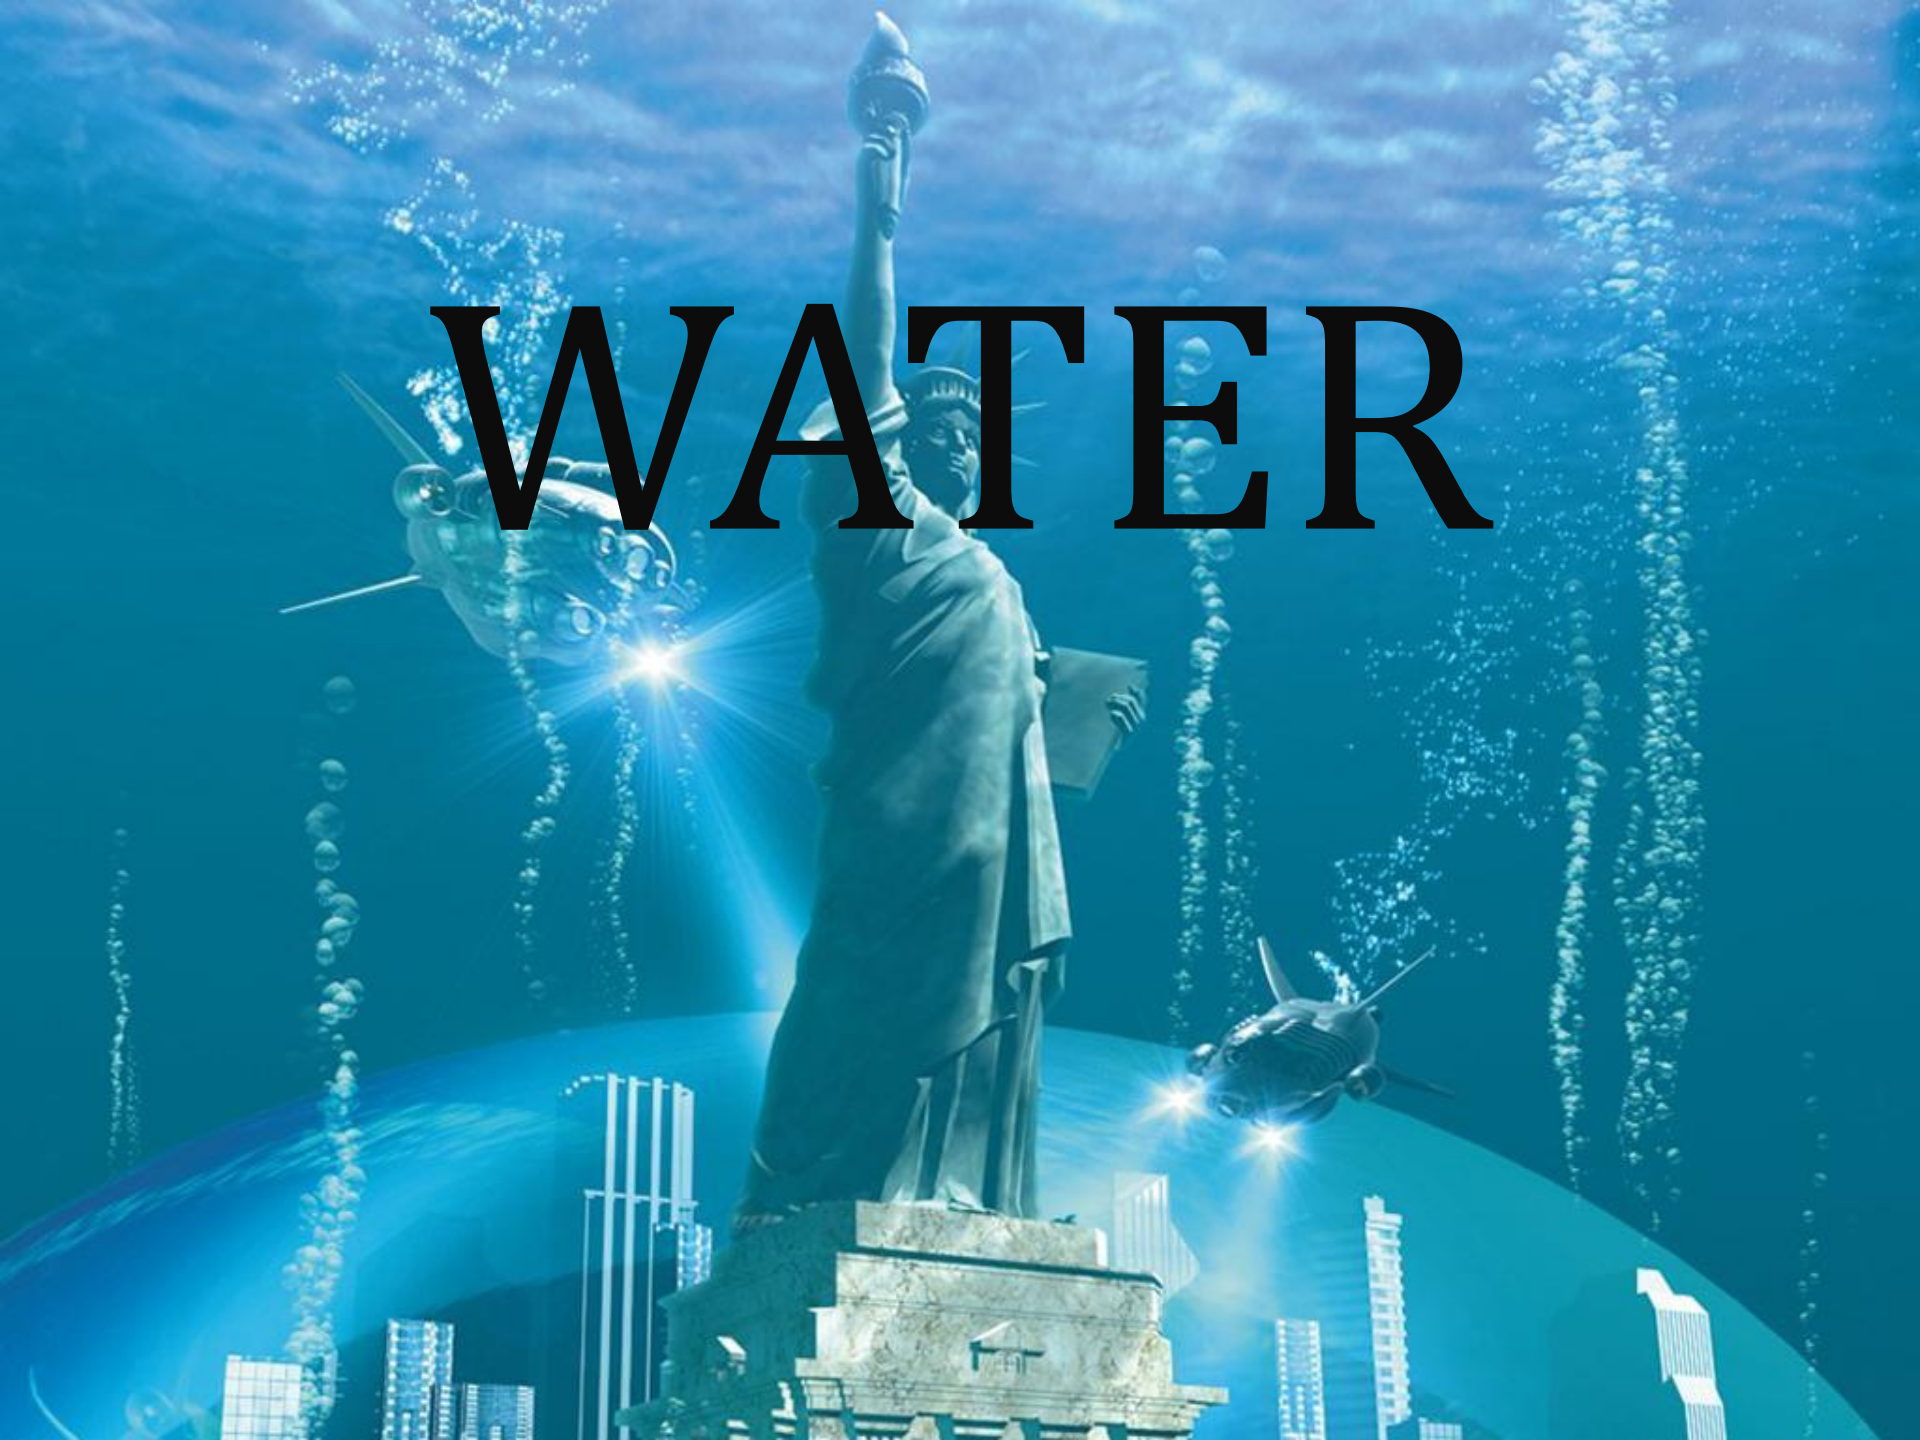

The electric power station burn coal to produce the energy that keeps your light on.

That burning coal gives  
off gases that cause the  
greenhouse effect and  
acid rain.

# WATER

**Many polluted water are merge in  
the rivers, lakes, sea.**

**Polluted water kills fish and  
other marine life.**

Factories produce necessary things, but they pollute the water.

We shouldn't throw litter around rivers or lakes!

We shouldn't wash our car in the rivers or lakes!

We must turn off taps when we don't need water any more!

# LAND

If you throw a glass bottle on the ground it will litter on Earth forever.

Aluminum cans and plastic bottles last up to 500 years.

Tin cans last 100 years.

Litter is not only ugly, but it can be harmful to wild life.

We must not throw litter on the ground.

Some animals can get hurt on sharps cans or broken bottles.

A large, leafy green tree stands prominently in the center of a field. The field is divided into sections of green grass and bright yellow rapeseed flowers. In the background, a line of tall, thin evergreen trees is visible against a sky with scattered white clouds. The word "TREES" is overlaid in large, purple, serif capital letters across the middle of the image.

# TREES

Most paper thrown  
away in the office  
just has printing on  
one side.

Old newspapers should be reused.

Because making newspaper from "old" paper requires less energy than making paper from trees.

Besides we take 500,000  
trees just to make the  
newspaper we reach every  
Monday.

A lot of young people  
are worried by  
environmental problems.

**Only together  
we save the  
world!**

**Remember it!**
