

Presentation  
on the topic:  
"Tour and travel"

Vehicles are numerous and we often have many choices

For the first time  
people  
traveled on  
foot.

This is the  
oldest and  
most natural  
way to travel.

the first "roads" for which vehicles were

invented : rafts, boats and ships

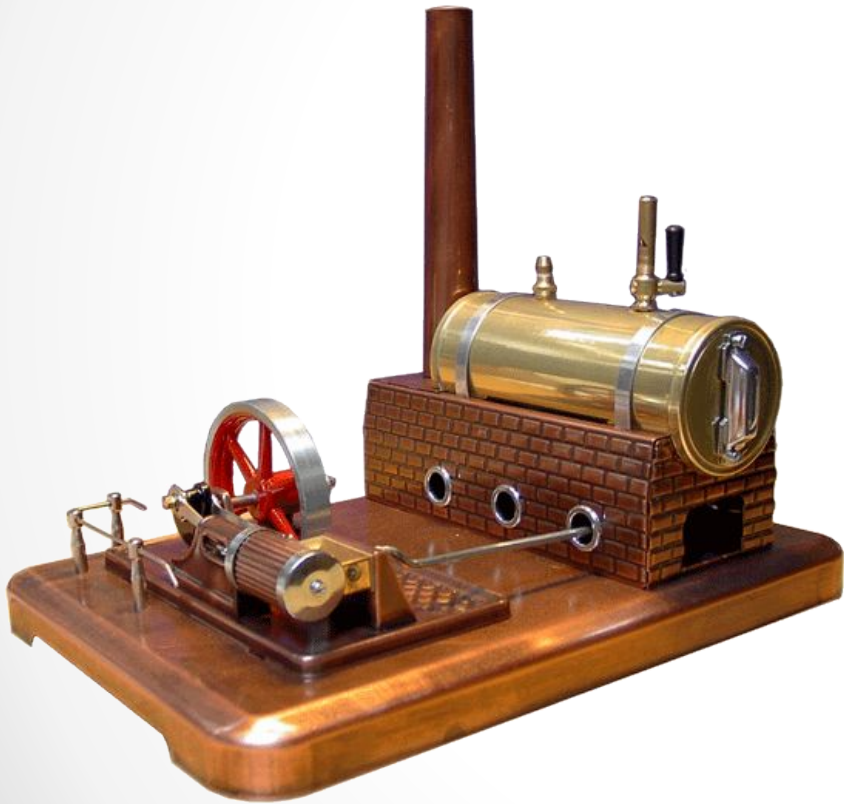

The ships then  
went into the sea,  
but they sailed  
along the  
coastline until the  
man learned to  
navigate, looking  
at the stars.

one of the  
greatest  
inventions of  
mankind was  
the wheel.  
this invention  
was a  
breakthrough in  
the history of  
transport.

Another invention was the steam engine. this was the main reason for the industrial revolution in the 19th century. it also helped to create the train.

Traveling by train is good because you can see the countryside and travel very comfortably.

travel by car is also a good choice, as you can start at any time and go to any place. you are limited only by the quality of the road.
