Dishwasher - electromechanical system for automatic dishwashing

Dishwasher use in catering establishments and in the home. Dishwasher connected to electricity, water and sewerage.

In 1850, a Joel Houghtonite invented and patented a machine for washing dishes, hand-operated

However, until the 1950s, dishwashers are not widely used, while remaining too expensive for the masses of consumers. Only in the 1970s, they have become common in homes in North America and Western Europe. In 2012, they were equipped with more than 75% of US homes, and Germany.

Advantages

Dishwasher does not require hot water.

Water flow below regarding hand washing

Dishwasher does not require a wide range of detergents and abrasives, sponges, brushes, etc.

Disadvantages

Dishwasher occupies much space

The inability of some types of washing dishes

The machine requires a connection to the mains

Thank you for
attention
