

Climate change

Global warming
increase
temperature on
Earth

The causes of global warming = heating of the Earth

Car exhausts

Burning of fossil fuels
Power plant exhausts
Producing carbon dioxide

Consequences:

Ice is melting

Sea levels are rising

The climate is changing

Effects

For people

- The whole countries will **vanish**
- **Low-lying areas** will lose their homes
- Some islands will disappear under waves

For wildlife

- 30-40% of animals and world's species may **become extinct**
- Animals may **starve**

For weather

- It may be extreme and unpredictable (heavy rain and snow, storms, heat waves, **droughts**, powerful hurricanes and tornadoes)

Solutions:

Save energy: 1. travel by bus not by car
2. use energy-saving bulbs
3. try don't turn up heat

causes

consequences

effects for

- people
- wildlife
- weather
