

PEOPLE

ARE

THEIR

ENEMIES

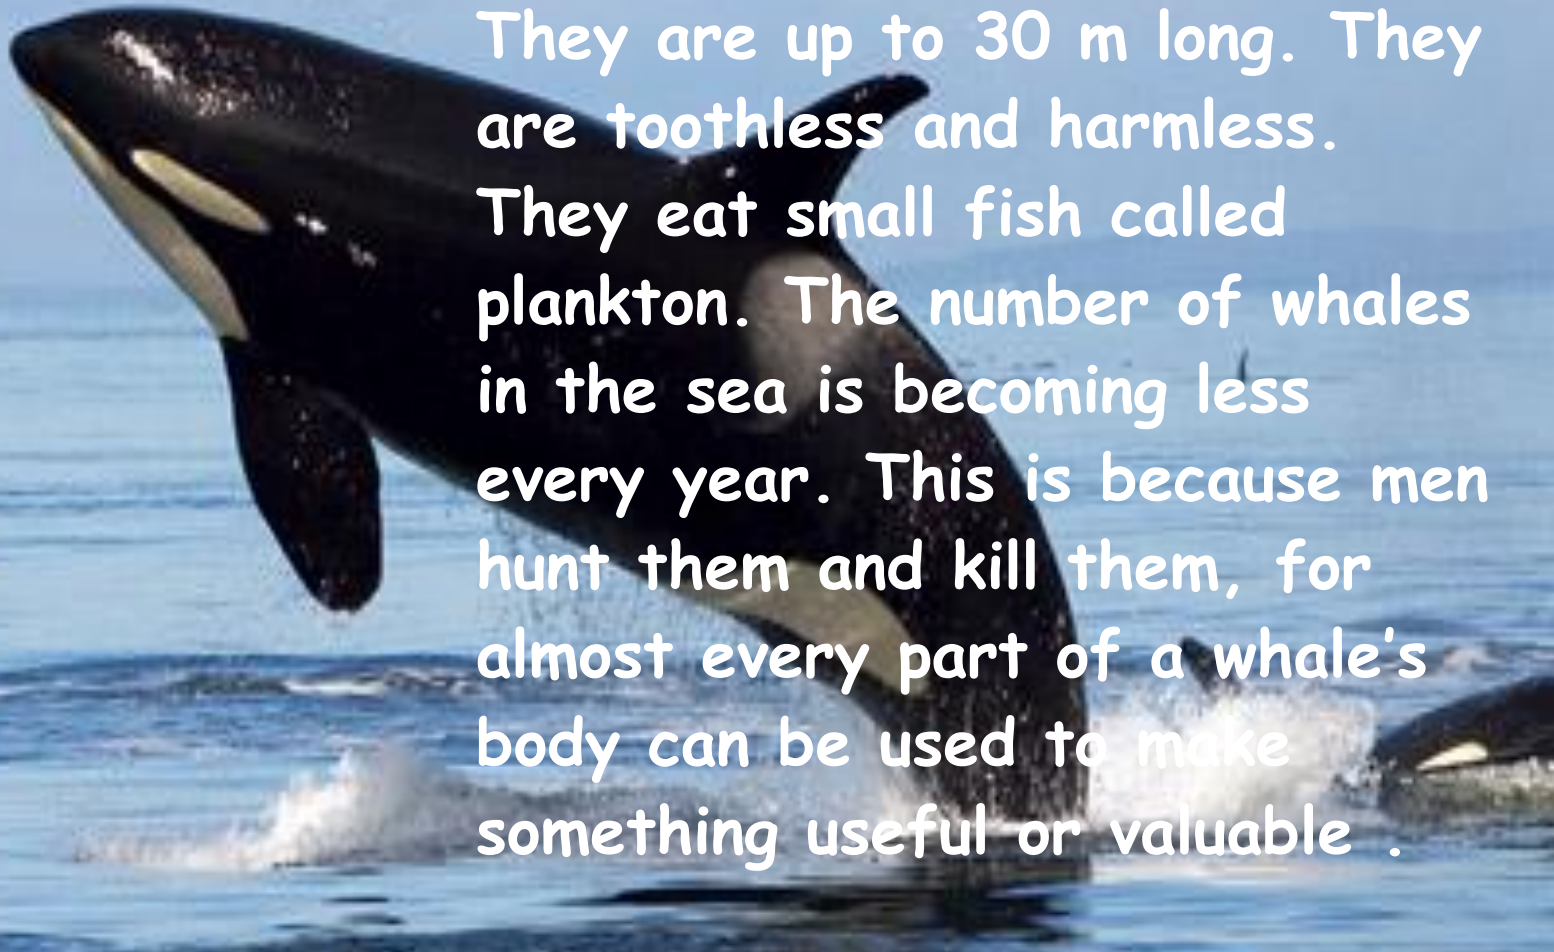

African elephant

African elephants live in African jungle. These animals are huge and grey. They are up to 3 m high and 4 m long. They weigh about 7 tones. African elephants eat fruit, leaves and grass. In the last 10 years people have killed nearly a million of African elephants. In parts of Africa the number of elephants has halved since 1970. They have killed them for their tusks, which they sell as ivory. They make ornaments of them. There are only about 600000 elephants in Africa now.

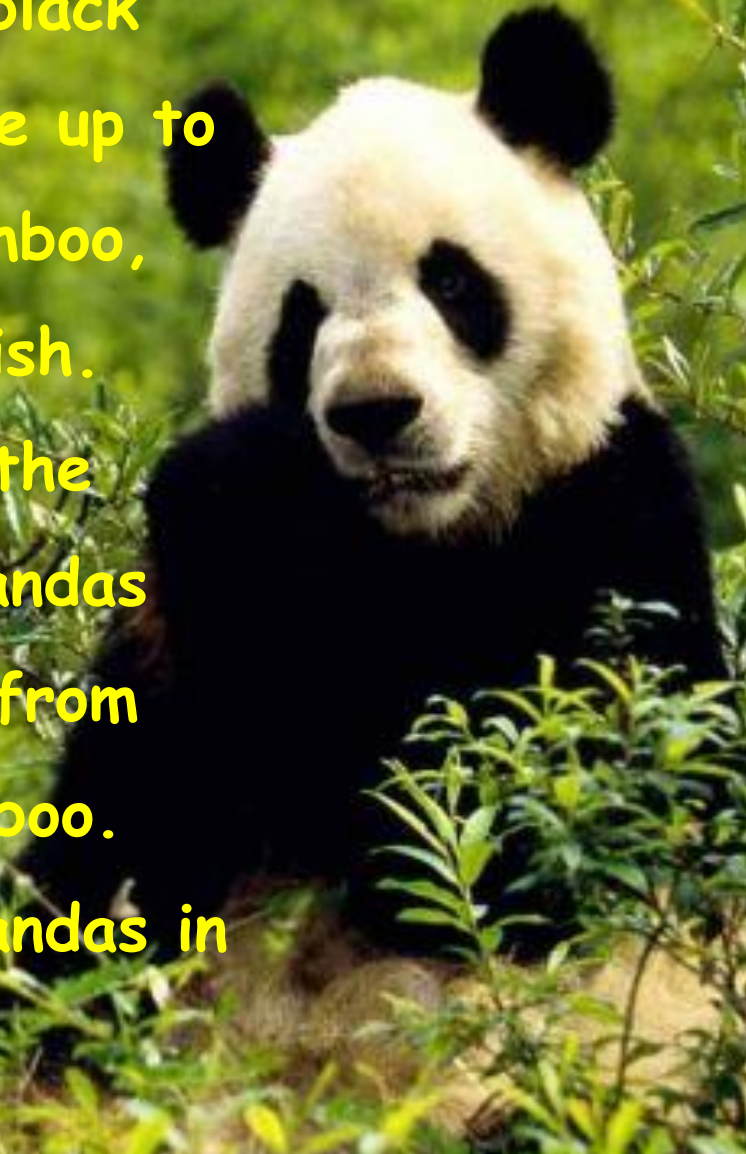

BLUE WHALE

Blue whales live in the Northern Pacific Ocean. They are the biggest animals in the world. They are up to 30 m long. They are toothless and harmless. They eat small fish called plankton. The number of whales in the sea is becoming less every year. This is because men hunt them and kill them, for almost every part of a whale's body can be used to make something useful or valuable .

GIANT PANDA

Giant pandas live in jungles of China. They have long black and white fur. They are up to 2 m long. They eat bamboo, plants and sometimes fish. People have destroyed the forests of China and pandas are in danger of dying from lack of their food-bamboo. There are only 1000 pandas in the world now.

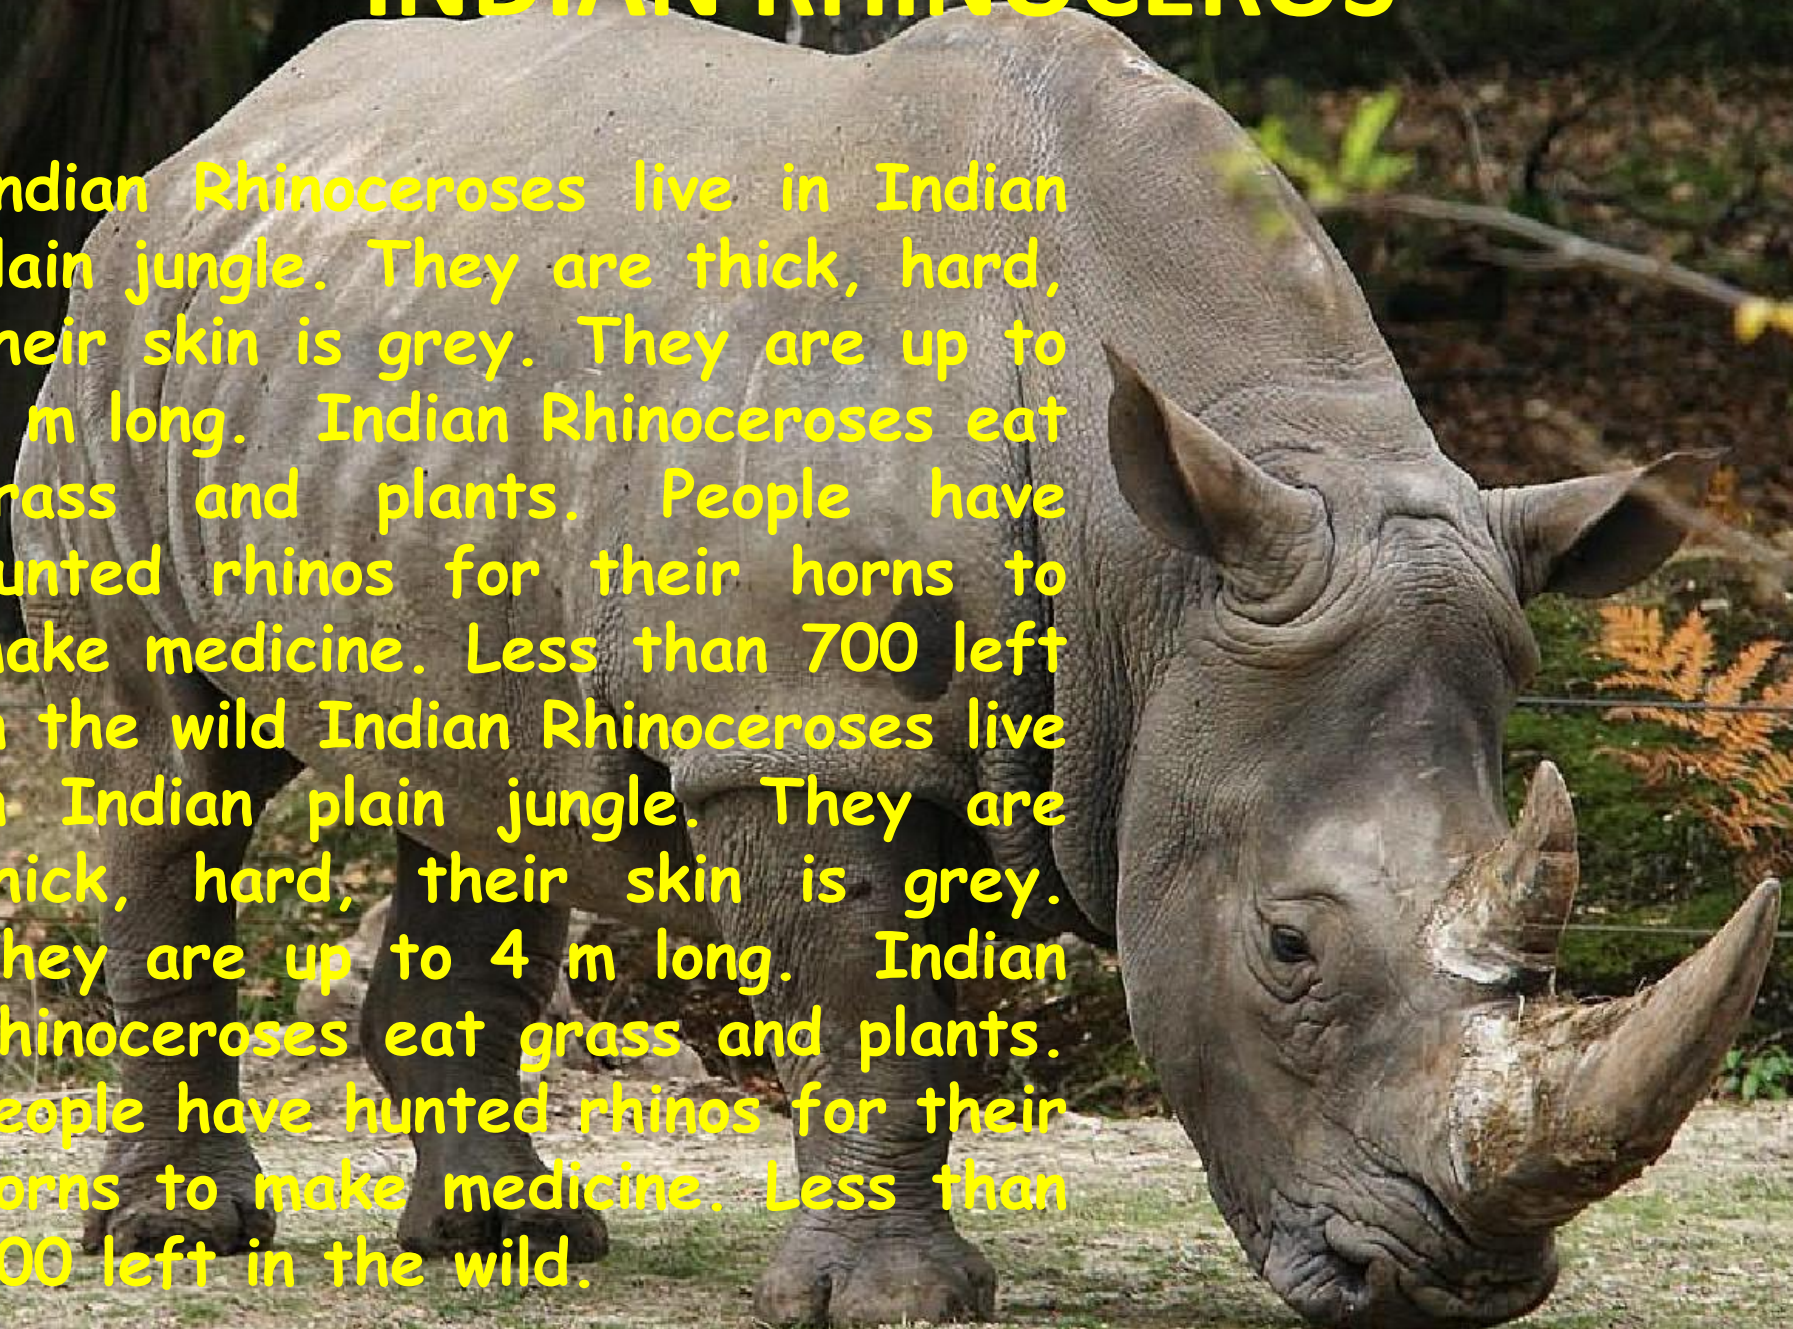

MOUNTAIN GORILLA

Mountain gorillas live in mountains and jungles of Africa. They are very large. They have thick black fur. Mountain gorillas eat fruit, flowers and plants. People have cut down the mountain forests which are the homes of gorillas and orang-utans. They have killed them for sport and there are only a few mountain gorillas and orang-utans left in the world .

INDIAN RHINOCEROS

Indian Rhinoceroses live in Indian plain jungle. They are thick, hard, their skin is grey. They are up to 4 m long. Indian Rhinoceroses eat grass and plants. People have hunted rhinos for their horns to make medicine. Less than 700 left in the wild Indian Rhinoceroses live in Indian plain jungle. They are thick, hard, their skin is grey. They are up to 4 m long. Indian Rhinoceroses eat grass and plants. People have hunted rhinos for their horns to make medicine. Less than 700 left in the wild.

INDIAN TIGERS

Indian tigers inhabit in Asian jungles. They are up to 3 m long. Their fur is orange, black and white. Indian tigers eat small mammals, fish and sometimes insects. Many years people have killed Indian tigers for their fur which they use to make coats and rugs.

NILE CROCODILES

A Nile crocodile is shown in a naturalistic enclosure. The crocodile is the central focus, lying on a sandy ground with several large, light-colored rocks scattered around it. Its body is covered in dark, scaly skin with a distinct pattern of bony scutes along its back. The crocodile's head is raised, and its mouth is slightly open, revealing sharp teeth. The background features a painted backdrop of a riverbank with green reeds and a large green leaf on the left side. The overall scene is well-lit, highlighting the texture of the crocodile's skin and the surrounding environment.

Nile crocodiles inhabit in and near African rivers. They are very large, up to 6 m long. Nile crocodiles eat birds, fish and mammals. People have killed Nile crocodiles for their skin to make shoes, handbags and belts.

POLAR BEARS

A polar bear is the central focus of the image, walking towards the viewer on a snowy and rocky landscape. The bear's fur is a pale, creamy white, and its black nose and mouth are clearly visible. The background shows a rugged, snow-covered terrain with some dark rocks and patches of snow.

Polar bears live in very cold regions, such as Arctic Circle, Canada, Greenland. They are up to 3 m long. Polar bears have thick white fur. They eat fish and seals. People have killed polar bears for their fur which they use to make coats and rugs.

ST LUCIA PARROTS

St Lucia parrots live on St Lucia island near South America. It's very hot and wet region. They have green, blue and orange feathers. They eat fruit. People have collected St Lucia parrots as pets. Maybe only 100 parrots left in the wild now
