

Our planet is in danger!

Forests in danger.

Forests have become very
often burn them cut down...
People who rest in the forest
leave garbage leave the fires
... We must protect our
forests!

Forest "before" and "after"

Air pollution. =(

Air polluting factories, cars, it should. Also be noted forest fires that produce thick clouds of smoke enveloping the large areas, and dust storms.

Forest "before" and "after"

Water pollution. =(

The pollution of fresh water - passage of various pollutants in the water of rivers, lakes, groundwater.

Forest "before" and "after"

Soil pollution. =(

Soil - special natural formation, which possess a number of properties, inherent in the animate and inanimate nature, formed in the result of long-term transformation of the surface layers of the lithosphere under the joint.

Forest "before" and "after"

We must protect our
planet!

Thank you for your attention.
=)
