# The project

on environmental  
protection

- April 22 is Earth day. People all over the world think about our planet. They think about air, water, plants and animals on the Earth. They say that our planet is in danger. Many people don't know how to protect animals and plant world, how to keep the water clean and the air fresh. But they are ready to do it. They try do it.

- We live in a world full of different types of pollution. Wanting to make their lives easier people have invented so many new devices and factories, that nature is in danger. Unfortunately, environment is not the unlimited source of resources. At the moment, our planet suffers from numerous problems and damages. It is all the result of pollution that comes from factories and plants.

- Wild world is also suffering. Many species of animals and plants begin to disappear. The other big problem is global warming and the greenhouse effect. As you can see, the list of environmental problems that need to be addressed, long. Otherwise, our planet Earth could be completely destroyed. People need to start solving these problems immediately. The most important thing they can do is to change your attitude to the environment.

- First of all, people should move to alternative forms of energy, such as wind or solar energy. In addition, a number of harmful plants must be reduced, because they heavily pollute the air and water.
- It would be nice if people started using electric motors instead of internal combustion engines.
- People should build more waste treatment plants.

- 
- People depend on their planet, from the sun, animals, and plants around them. Now the problem is to protect life on Earth and saving our planet for the future. We are obliged to protect nature.

# The End

Thank you for your  
attention
