

Satellites.

- *Satellite* - is an object, which has been placed into orbit by human endeavor.

Satellites:

- Natural
- Artificial

Natural satellites:

- The Moon.
- The Phobos and the Deimos.

Artificial satellites.

- Sputnik 1.

- Explorer 1

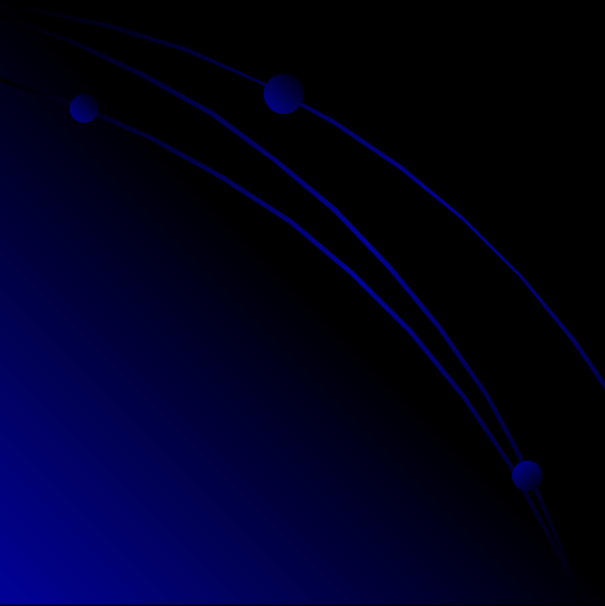

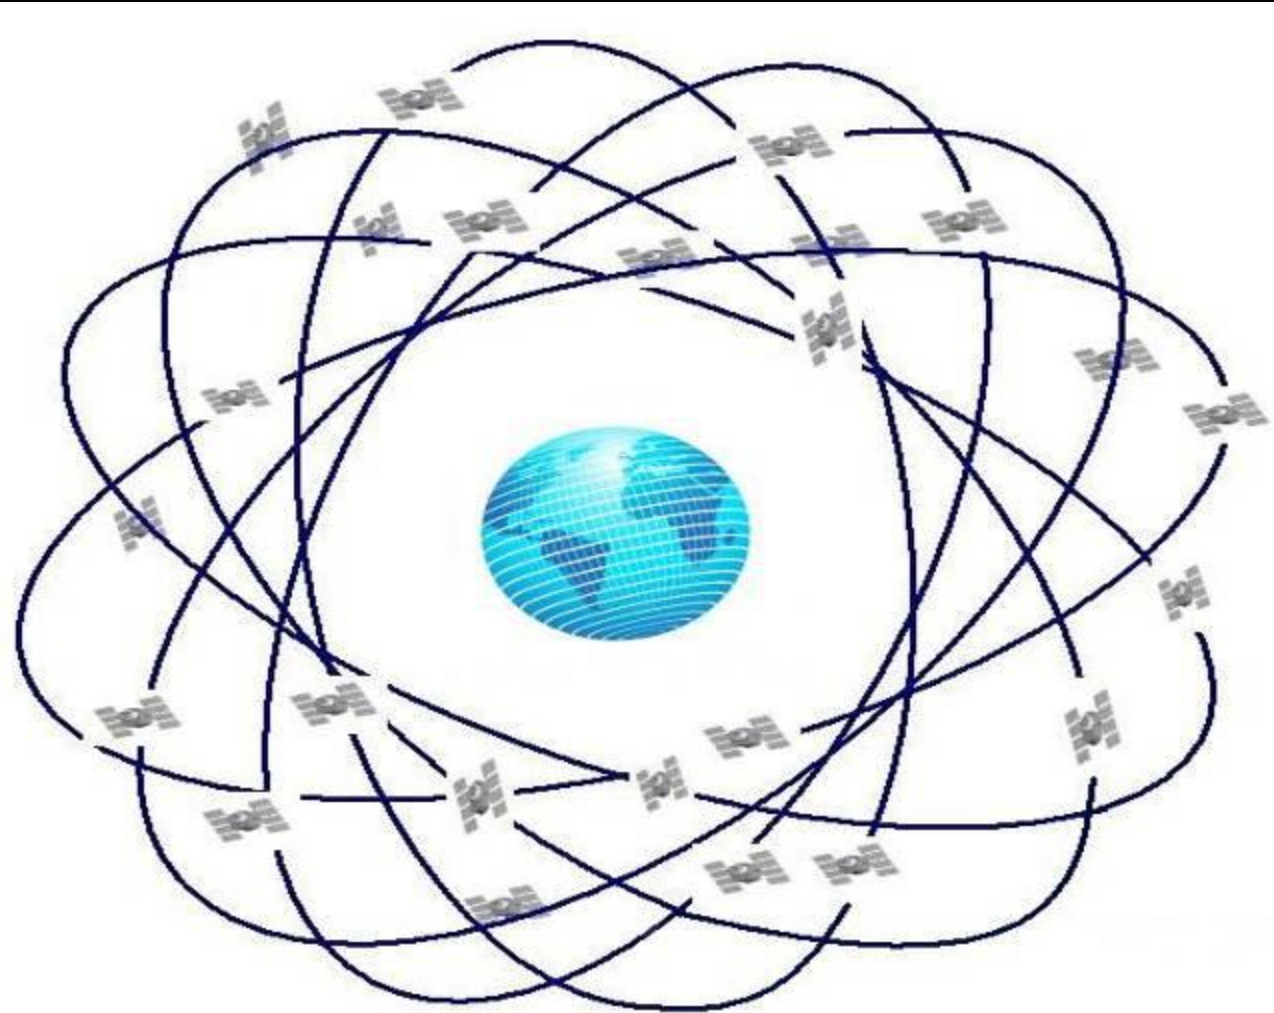

The first artificial satellite was Sputnik 1.

- It was launched by the Soviet Union on the 4th of October 1957.

A few hundred satellites and thousand of unused satellites are orbiting the Earth.

Purposes:

- Military observation
- Communication
- Navigation
- Weather forecast
- Researches

The background is a rich, multi-toned space scene. At the top center, a bright, multi-pointed star radiates light in shades of purple and pink. Below it, a large, glowing blue nebula with intricate, swirling patterns fills much of the upper half. In the lower foreground, a planet with a prominent ring system, similar to Saturn, is shown in profile, its rings appearing as concentric blue and white bands. The overall color palette is dominated by deep blues, purples, and magentas, creating a dreamlike and ethereal atmosphere.

Thank you for attention!
