Biotechnology is engaged in processing raw materials of biological origin by means of microorganisms to produce products of perfumery, medical and agricultural spheres.

*These include essential oils, vitamins, supplements, enzymes.

*Biotechnology has given mankind a myriad of drugs, antibiotics, new agricultural crops.

*Not surprisingly, biotechnologist profession is valued in society, especially now in the era of development of innovative technologies.

* Depending on the specialization of the employee, he is engaged in research in the field of microbiology, synthesizes new food additives, enzymes, ETC.

*Competent specialists are in demand in the pharmaceutical companies in the food and perfume industry.

*Today, we can safely say that biotechnology- the science of the future.
