

Ecology and fashion.

Project was done by Borodina
Ludmila from 10 "B".

The main problem.

- ▶ How fashion depends on ecological situation.
- ▶ What does fashion mean in our interpretation.
- ▶ How must we fight to clean our environment .
- ▶ Peoples attitude to this problem.
- ▶ Peoples role in solution this problem.

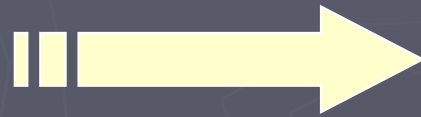

Dependence on fashion.

Nowadays only a few people think about the connection of ecology with fashion. Fashion has an incredibly big influence on ecology.

What do you think, where do fur clothes appear from?

Really, people do kill some rare animal only because of their fur for designing or creating a new style, a new stream in fashion.

Somehow, people can not understand the point of their actions. They can not see, that in one bowl of balance there is nature creatures and on another one there is only an aspiration to look a little bit more stylish, more attractive than the crowd.

My opinion.

I don't see the way out in it. Is it really so important to be more beautiful in clothes, than in your soul? It's obvious that in pursuit for animals death people kill some part of their soul, they murder nature in themselves, they simply become worse than every creature on Earth.

We know, animals kill only if they are hungry. We allow ourselves to make equal luxury in appearance and ugliness in soul. It is not the right of Fashion, in my opinion, it is just a cover, under that cover there is not anything important, and people should not try to be better by price of somebody's death.

What we must do.

You can watch quite common situation nowadays: people are quarrelling about some justice, they assert, that this world is unfair, but if we really want to change this situation, we must do something, not just speak. Words are empty, they are just a surface. There must be something, not emptiness under them .

In our days people make some kind of competition or lecture, which can show us problems of ecology including the problem in fashion. We should discuss this topic more often and may be we will understand it. I hope in future all people will start looking no just after themselves, but after the nature too.

Let's save our world!!
It needs our help!!

If we won't help it, it can be destroyed.
