- *Aim:* *Research of when the first man appeared on the territory of the country*
- *Object:* *Stone tools, The Cave men, tribes, barrows*
- *Subject :* *Research of Britons. Who are they?*

Problem: Nobody knows when the first men appeared on the territory of England, nobody can tell exactly

Actuality: We like to speak English, we try to know much more about this country, but who are Britons?

Hypothesis: We do not know what became of those men. The Cave Men lived after them, their tools were better made: they had harpoons to catch fish and arrow – heads to catch birds/ but nobody knows what became of the cave men.

Methods: theory, statistics, illustration.

The territory of England

Nobody knows when the first men appeared on the territory of this country, nobody can tell exactly.

Our research

- The very oldest things we can find in this country are some rough stones tools which dropped from the hands of the men who made and used them in the old days when this island, but the part of the continent now called Europe*

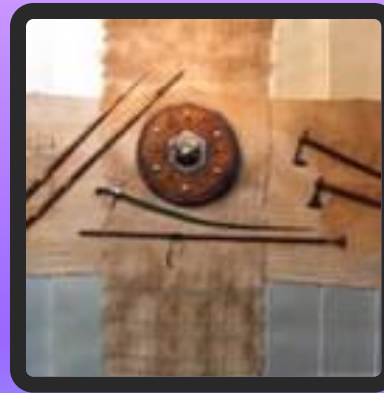

Wild animals and wild men could walk everywhere:

- *There were no English channel or Irish Sea and nothing could stop them*

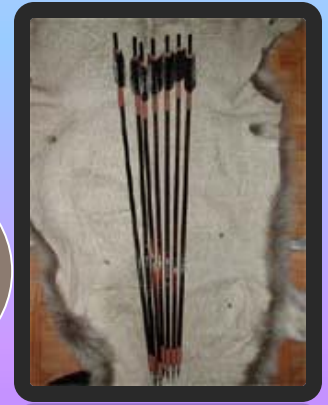

The Cave Men

- *We do not what became of those men. The Cave Men lived after them, their tools were better made: they had harpoons to catch fish and arrow-heads to catch birds*

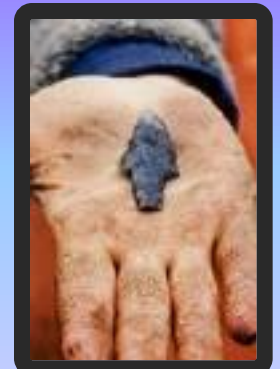

Arrow-heads

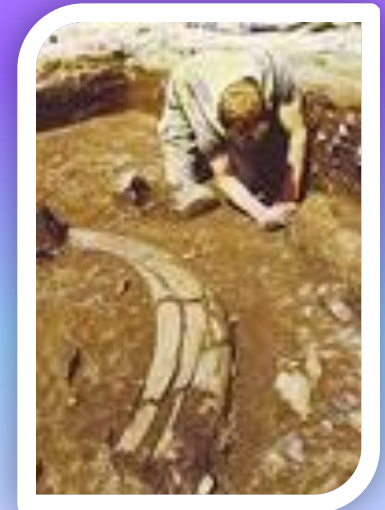

The Cave Men

tools

The most interesting things which the Cave Men left to us are their drawings of animals they saw before them: the great long haired mammoth, the reindeer, the oxen. Many of such drawings we can see in the caves of England and France.

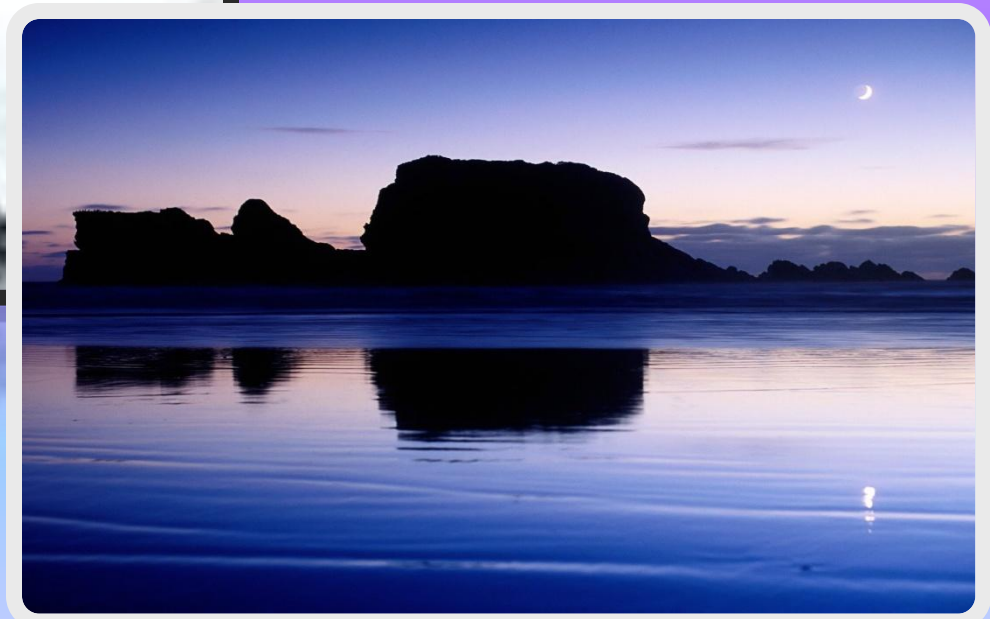

Century after century

- *The earth – ball rolled on the year after year, as the ground sank in some places and rose in other, the sea rushed in over the lowest parts and formed the North Sea, the English Channel, and the Irish Sea.*

After this men appeared again in this country from over the sea. Many different tribes followed each other, the new peoples came here, pushed the other to the north and to the east, even to Ireland and to Scotland.

3,000 years ago!

- *All those people left to us no names, no writing. They lived more than 17 centuries Before Christ (B.C.)*

Barrows

- *We can still see in many parts of the country the long and round grave-mounds called barrows and we believe that they belong to the people of these times*

There are skeletons and bones in
them together with the rough
cups You can see them in the
museum bellow the Cave men's
tools

Sometimes a little child had a whole barrow to itself; sometimes many people are buried together. We find in these barrows very interesting ornaments, brooches and necklaces, there are also the tools of bronze. As time went on the people in different parts of the country began to use iron tools.

The visits of some travelers

- *We know quite a little about these times from the visits of some travelers, who came to look for the tin in different part of the island.*

A few centuries later...

- *A great light suddenly lit the country, and with the help of it we can now see plainly the people who lived in it... We call them Britons and their country is called Britain.*

Summary

Let us take our map and find the Mediterranean Sea – the sea between the lands of Europe and Africa... The nations who lived on shores of this great sea were very different from the Britons – and other tribes in the islands.

England in our time
