

Lion is one of the most beautiful animals

We all know that lion is called the King of the Beasts

**They have a kingly appearance:
a magnificent mane, a
muscular body, sharp fangs
and claws.**

Their colour may vary from yellowish to dark-brown,

but there are white lions also.

Females are usually smaller in size and have no mane.

Lions belong to the order of predators.

That means that his main food is other animals.

Lions live in savannas and in forests.

Lions form special family groups – prides.

They hunt in groups as well, chasing their prey together.

I saw animals only in the zoo, but I'd like to go >>>
to safari park and see this wonderful animal in
its natural environment.
