

LITTER PROBLEM!

- When we got the task to explore the problem of pollution in our town we decided to take some photos of it.
- We came to the conclusion that our town is not too dirty.
- Of course we photographed some places with litter.
- On the whole we want to say that the situation is not bad!

- More over we want to thank those services which work for the sake in order to keep our town clean.
- The main main problem is in the attitude of our people to ecology.

- Most of us do not understand what may happen to our planet in the future.
- Only imagine piles of litter on your sportsground in the streets and every where...
- It will cause negative emotions and affect our health.

- In our opinion it is better to put some more litter bins in the streets and near shop.
- At school we must explain elementary rules of behaviour in the streets , in the forests , by the rivers to all children.
- If it is possible to plant trees and flowers.
- Our common efforts can give good results.

*Let's do our best to
save our town from*
