

A close-up photograph of a field of daisies. The flowers are in various stages of bloom, with bright yellow and orange petals and dark brown centers. The background is a soft, out-of-focus sky with a gradient from light blue to pale yellow, suggesting a sunrise or sunset. The overall mood is warm and natural.

Man and the natural world.

Maintenance:

- Environmental problems.
- Dos and Don'ts.
- Ecology of man.
- My opinion.

A scenic view of a river flowing through a lush, green landscape. The foreground is filled with a dense field of white and pink flowers. The river flows from the upper left towards the lower right, surrounded by green grass and rocks. The background shows a hilly, grassy area under a clear sky.

Nowadays people understand how important it is to solve the environmental problems that endanger people's lives. The most serious environmental problems are:

- pollution in its many forms (water pollution, air pollution, nuclear pollution);
- noise from cars, buses, planes, etc.;
- destruction of wildlife and the beauty of the countryside;
- the growth of population.

Dos and don'ts

- Develop international cooperation to solve ecological problems together.
- Save water, gas, energy and other natural resources.
- Keep your towns, cities and countryside clean.
- Don't waste water, gas, energy, natural resources.
- Don't poison the water, air and soil.
- Don't turn the planet into a rubbish dump.

Ecology of man

It may sound funny to you, but man needs protection and care as much as animals do. People's habitats – their homes, towns and cities – must be kept ecologically clean. In the places where people drink dirty water, eat bad food and breathe polluted air they suffer from serious diseases and die early; their children are born weak.

No medicines prescribed by the doctors can save them. This problem becomes more and more serious with every passing day. The modern way of life, when people do little physical activity, use cars instead of walking, watch television for many hours and work on computers is turning them into “legless creatures”.

My opinion

I think we must protect our environment. If we save our environment, the future generation will be thankful.
