

MOBILE PHONE

*COMMUNICATION
INVENTIONS
THAT CHANGED THE
WORLD FOREVER*

“Almost all new ideas have a certain aspect of foolishness when they are first produced.”

Alfred North

Whitehead

First Generation Cell Phones

- In 1983, Motorola unveiled the first truly portable cellular phone to the world.

Motorola DynaTAC 8000X

Second Generation Cellular Phones

- Phones based on 2G technology were much smaller than the brick telephones of the mid to late 80s

Third Generation cellular phones

- 3G mobile phones usually include innovations to receive much more than phone calls

3G Third generation of wireless technology will

Provide high-speed Internet

Allow streaming videos

Offer video conferencing

Offer Video IVR

Enable high-definition gaming

Download/Upload large files easily

Activate quicker TV streaming/
Mobile TV support

Fourth Generation – 4G – technology.

- used in the next generation of electronic book readers, In-car computer navigation systems and possibly even netbooks which are the fastest growing area of growth in the home computer market

G1 from T-Mobile

- the new player is Google who make the Android operating system available and the first phone to appear is the G1 from T-Mobile

Conclusion

Today's mobile phones are small enough to slip in to your pocket but also powerful enough to surf the internet, send emails and even make video calls
