

MY FUTURE PROFESSION

Operator of post centralization

The operator of a post of centralization is

- ◎ Translation centralized switches and the control signals from the remote post centralization or local controls switches and signals. Control for correct preparation of routes on the instrument readings management. Participation in the production process shunting. The audible and visual alarms when receiving, sending, skipping trains and

The operator must know:

Technical-administrative act railway station; technological process of work of a railway station in accordance with the legislation relating to the circle of the executed works; the device of centralized arrows, rules of transferring their Curbeam; operating rules of the signalling equipment; instruction on the safety of movement of trains by manufacture of works on maintenance service and repair of signaling systems; rules of cargo transportation.

Pros of working

- ◎ I like a good, friendly staff, needed and responsible work, and the schedule. Day, night two days at home." So my job I like.

Disadvantages of

- Yes, probably, like all night... Very severely mentally. Especially in the morning, exactly at this time, according to statistics, most of retirements and accidents.

Performed work:
