

My hobby

Nosov Vasya, 5 "G"

□ Hobby is something people like to do in their free time. Different people had difference hobbies. The most popular hobbies are: collection different things, reading and travelling. Nowadays sports and playings computer games has become very popular with young people.

□ My hobby is collection of different stones from different places of my travelling. And I want to tell about some part of my collection and it's history.

- 
- 
- The first stone from my collection is gyps. I found it in my travel in the Arhangelskaya region on the shore of the river Pinega. It is a very beautiful piece of stone. It has crystal structure. It is a mineral of pink colour and it shines under the sun rays.

- 
- The next stone is quartz from the same travel on river Pinega. It is like a glass, because it is transparent.

- 
- The third stone is lava. My elder sister found it for me in the little volcano of Sayan near the lake Baikal when she was in expedition with our tourist school club.

- 
- The last stone is also lava, but from Kamchatka volcano. It is a present from my sister too. She had a practice there with her friends from the geography faculty. This kind of lava has another structure and colour in compare with the previous lava. I think that lavas are a very interesting stones of my collection.

There are a lot of other interesting stones in my collection. I want to say that my hobby is very attractive, because I can remember the memories of my travelling. And I think that my collection will be bigger if I will travel more. So you can also present me some unusual stones from your travels. 😊
