

# *Pollution*

❖ About 150 years ago the air was pure and clean.

Then people  
started building  
factories and  
many of the  
things they  
make, like cars,  
put a lot of  
harmful gases  
into the air.

Today the air is so polluted in some places that it's not always safe to breathe there.

Many cities around the world have air polluted with “smog”. This is so strong in some places that the air, which should be a beautiful blue, looks brown.

❖ The planet Earth is mostly water. Oceans cover the biggest part of it – and there are lakes, rivers, streams and even water underground. All life on the Earth – from the smallest bug to the biggest whale – depends on the water. It's precious.

A photograph showing a body of water that is heavily polluted. The water is a murky, brownish-yellow color. In the foreground, there is a large, dark, irregular object floating in the water. The background shows a shoreline with various pieces of trash, including plastic bottles and other debris, scattered along the edge. A black pipe or drain is visible on the left side of the shore. The overall scene depicts environmental pollution.

**But we are not doing a very good job of keeping water clean. In many places, the water has become polluted.**

**Rivers and lakes are polluted by garbage or by poisonous chemicals which are dumped right into them.**

- ❖ Underground water can be polluted by gasoline or by harmful liquids that seep into the ground. Some fertilizers and pesticides used in farming leak down through the dirt, too.

When you throw something away, it goes in a garbage can.

Once a week a garbage truck comes and the can is emptied, and that's the last you see of it. But what do you think happens to the garbage then? Does it just disappear? No way!

Now we are making so much garbage that in many places, there is not enough room to bury it all.

**We have to act fast and cut down the amount of garbage we make. Can we do it? You bet!**

***We can recycle (which means re – using materials instead of throwing them away) and reject (which means not buying things that can't be re – used, like plastic wrapping and other packaging).***

**KEEP**  
THIS PLANET CLEAN

**If we recycle and reject we will  
produce a lot less garbage,  
and help keep our planet  
green!**

A woman with blonde hair is posing in a strapless gown made of tea bags. The gown is divided into three vertical sections of different colors: blue on the left, red in the middle, and green on the right. The tea bags are arranged in a way that creates a full, voluminous skirt. The background is plain white.

Tea bags

A woman is wearing a dress made of chip bags, standing at a fair. The dress is made of many colorful chip bags, including brands like Doritos and Mission. In the background, other people are visible, and there are fair structures and decorations. The scene is outdoors.
