

Some day computers will  
be as intelligent as humans

Currently,  
computers  
are created  
and assembled  
by humans, but someday  
they will be able to build  
themselves.

The computer is not smarter than humans. But some part of your mind and knowledge of people managed to pass a computer, the computer became his faithful companion in a variety of cases and studies.

A **computer** is a programmable machine designed to sequentially and automatically carry out a sequence of arithmetic or logical operations.

# Type of computers

# Input and output devices

# Iron

A **robot** is a mechanical or virtual intelligent agent that can perform tasks automatically or with guidance, typically by remote control. In practice a robot is usually an electro-mechanical machine that is guided by computer and electronic programming. Robots can be autonomous, semi-autonomous or remotely controlled

# Androids play musical instruments

# Conclusion

- The computer came up with a man, a man had programmed, corrects people, hence the conclusion - people smarter. Well, if you combine human and a computer - it will be a great force.
