

Some day computers will
be as intelligent as humans

Currently,
computers
are created
and assembled
by humans, but someday
they will be able to build
themselves.

The computer is not smarter than humans. But some part of your mind and knowledge of people managed to pass a computer, the computer became his faithful companion in a variety of cases and studies.

A **computer** is a programmable machine designed to sequentially and automatically carry out a sequence of arithmetic or logical operations.

ly and automatically

Type of computers

Input and output devices

Iron

A **robot** is a mechanical or virtual intelligent agent that can perform tasks automatically or with guidance, typically by remote control. In practice a robot is usually an electro-mechanical machine that is guided by computer and electronic programming. Robots can be autonomous, semi-autonomous or remotely controlled

Androids play musical instruments

Conclusion

- The computer came up with a man, a man had programmed, corrects people, hence the conclusion - people smarter. Well, if you combine human and a computer - it will be a great force.
