

MAUSOULEUM™

Temple for the Soul

- My site is www.mausouleum.com. It is an HTML/CSS site - not WordPress - I do not need a CMS.

-
- Event Calendar:

- I would like an event calendar coded in the site, which includes the following:

- 1. Headers, Footers & CSS of the site
- 2. They can view day, month, year, etc.
- 3. They can click on the event and view the details either in a pop-up or new window.
- 4. They can register & pay for the event
- 5. It has a backend admin to enter events, setup # of attendees, pricing, etc.
- 6. The admin also allows for events to be displayed or not displayed.

-
- Appointment Calendar:

- 1. A form that my client's can request an appointment.
- 2. The form will display the dates & times of availability.
- 3. They can pre-pay for the appointment.
- 4. Backend admin - I can make the times and days available for them to request the time.
- 5. They will receive confirmation upon approval.

-
- Shopping Cart for Services

- 1. The ability to add services to a shopping cart and purchase them.
- 2. Adjust quantities, etc.

-
- Registration Database:

- 1. This will contain all of the clients and their purchase history.

Feature List

TASKS	Development	QA	Management	Total	Comments
Initial work					
Project estimation					Estimate breakdown
Setup/Preparation					
Modules					
Registration form					Registrstion for paying for the event
Calendar					Table for looking through the events
