Gothic style

(gothic style)–

(From ital. gotico, it is literally – gothic, i.e.,

Concerning to the German tribe it is ready),

Art style,

Become by the final stage in development of the European medieval art and existed

Between the middle XII and XV–XVI centuries

The most suitable the name–

« Lancet style »

Tendency up, ease of designs,

Frame system and the ridge arch,

Openwork decor,

Painting by light, stained-glass windows.

- Gothic art, replaced Romance,
- Remains cult to destination
- And religious on character.

Unlike the Romance period the centers of the European religious, cultural, political and economic life by the end of XII century of steel not monasteries, and cities.

And the centers of a public life of medieval city became a **town hall** (a building of city self-management) and a **cathedral** (a large Christian temple).

Architecture of the Gothic

The main architectural constructions of Gothic

City style

hall

Town hall - a building of city self-management-
Represented the big stone building with a hall for
assemblies on a ground floor and subsidiary
premises on the second. Above a town hall the
tower - a symbol of freedom of city
towered.

Cathedral

Cathedral - model of
universe, a symbol of the Universe And some kind
of the arch of knowledge of it, All art build which,
expressed idea of heavenly and terrestrial hierarc

CATHEDRAL – THE CENTER OF THE CITY LIFE

Cathedrals should contain all numerous urban population. Before cathedrals preachers acted, spent discussions of the professor and students.

Built cathedrals city masters (instead of monastic, as before).

Townspeople often were customers

Or founders

Works of art for an ornament of cathedrals.

GOTHIC CATHEDRALS

considerably differed from monastic churches of the Romanesque period:

The Romanesque church is heavy and stocky. The Gothic cathedral is easy and directed upwards.

It is connected by that in Gothic architecture began to use a new design of the arches.

If in Romanesque church the massive arches are based on thick walls, that in a Gothic cathedral the arch leans on arches, and those in turn — on columns.

Lateral pressure of the arch

It is transferred flying buttress (external semiarches) and to buttresses (to external support, some kind of "crutches" of a building).

Such design has enabled
To reduce thickness of walls,
To increase internal space of a building.
Walls have ceased to serve as a support of the arch,
That has allowed to do in them set of windows, arches, galleries.

All semantic symbolics of a Christian temple repeats in its western portal.

The door is a transition from one space in another, from worldly in sacred.

Steps – a symbol of an ascension to the God. Three portals – a symbol of the Sacred Trinity.

Portal – an input in a cathedral

Khimers - a sculpture in an image of a fantastic animal.

At the same time the belief in miracles, fantastic animals, fantastic monsters was kept. Their images meet in Gothic art also often, as well as in Romance: for example, in the form of sculptures — chimeras or sculptures-water-drains — gorgylies.

Gorgylies – sculptures-water-drains.

PAINTING OF THE GOTHIC PERIOD

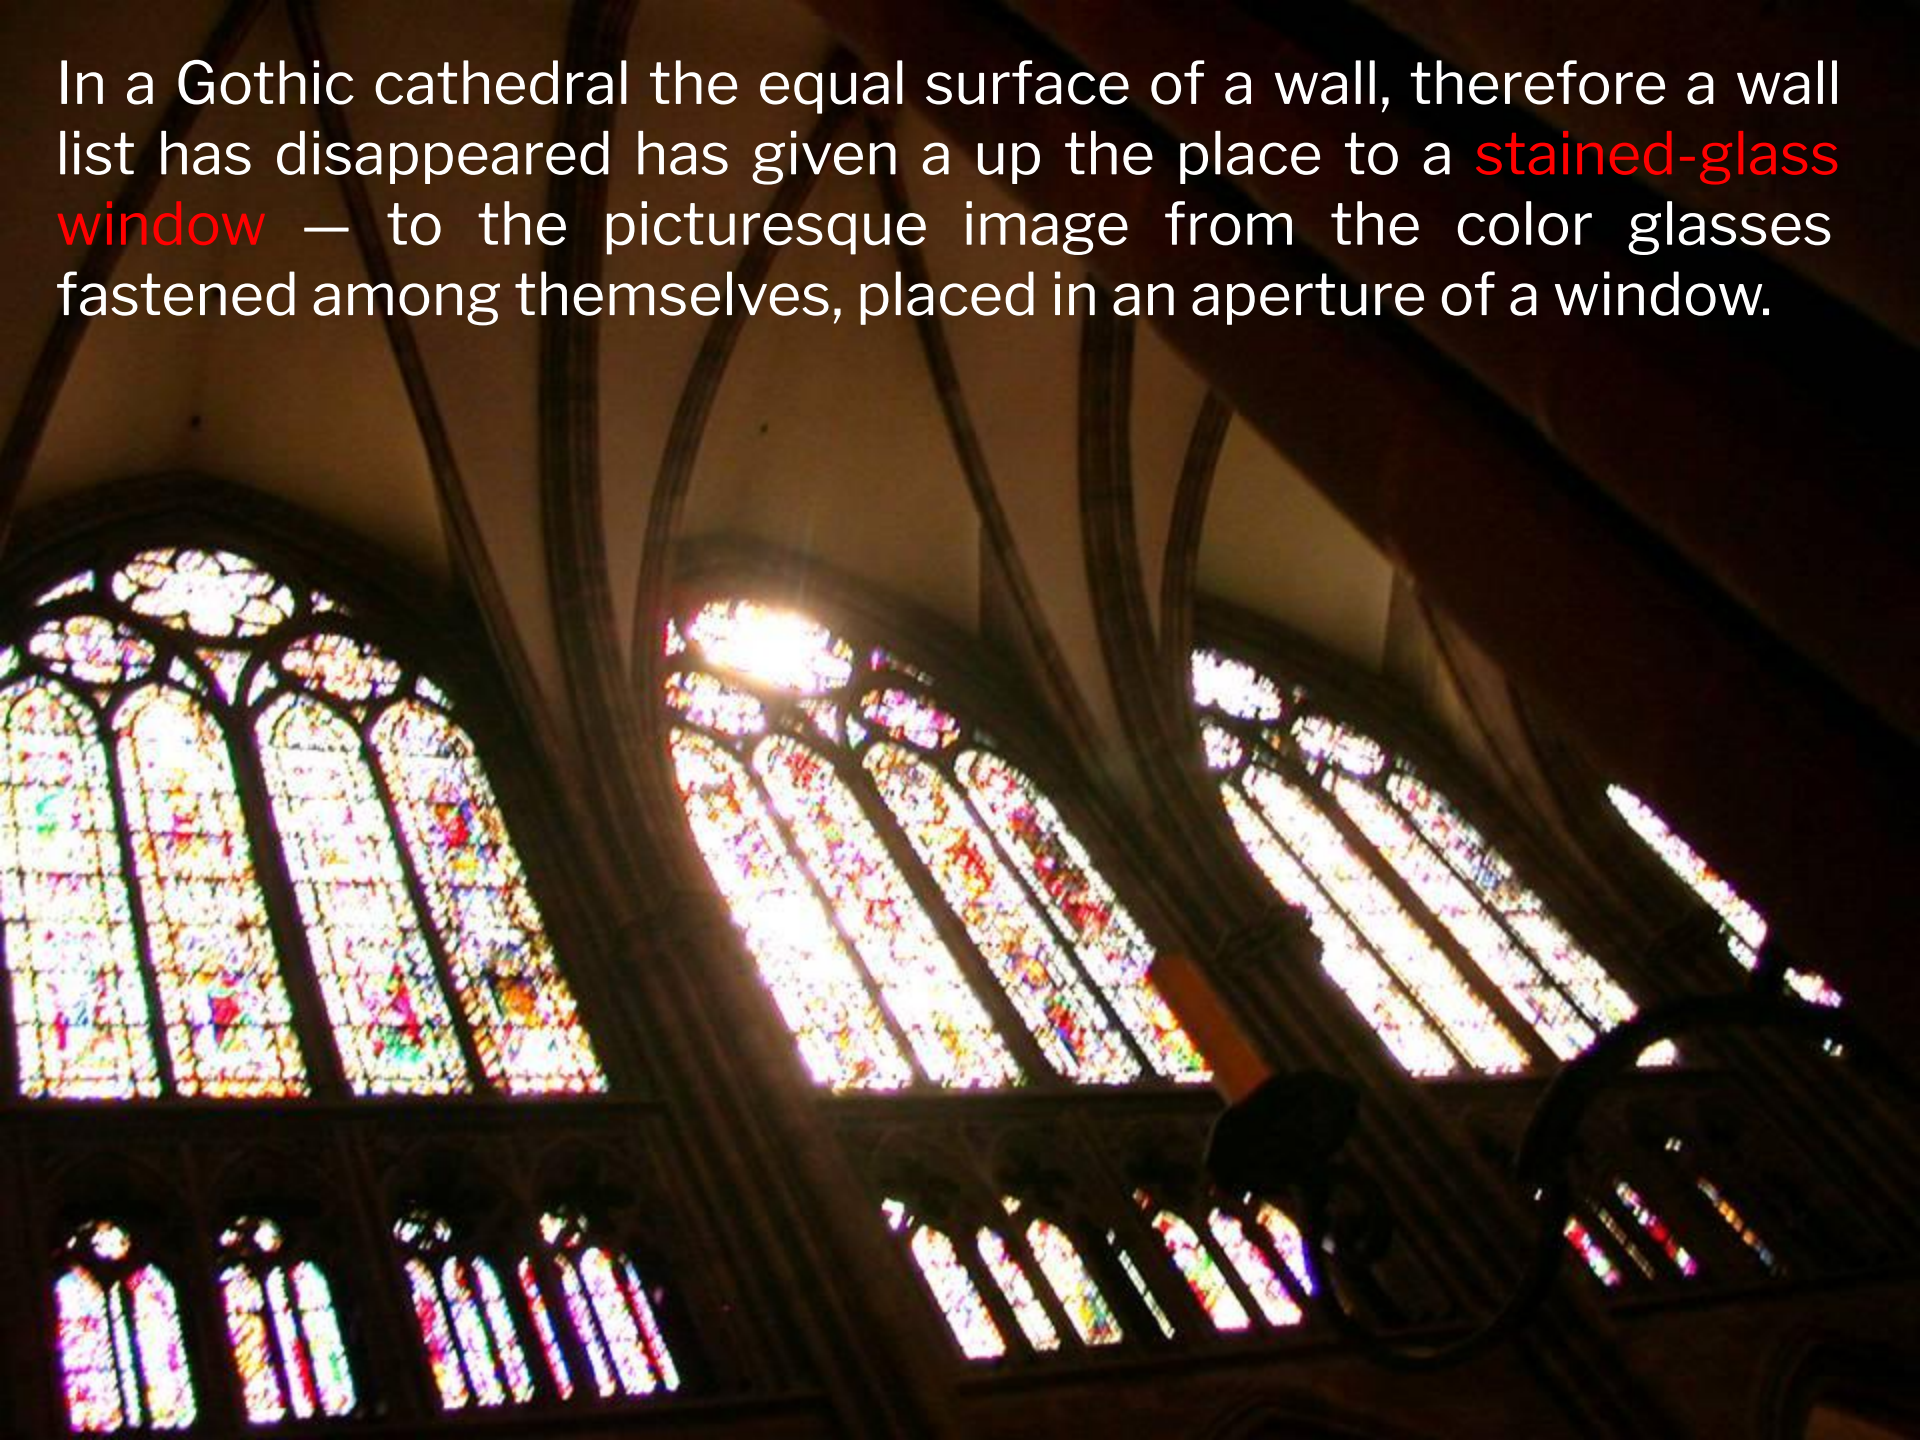

Sent-Stephane
Church in
Paris

Stained-glass windows

Saint-Sauveur –
Chapel of the
Lui IX,
1243-1248,
arc. Pierre de
Montero,
Paris, France

In a Gothic cathedral the equal surface of a wall, therefore a wall list has disappeared has given a up the place to a **stained-glass window** — to the picturesque image from the color glasses fastened among themselves, placed in an aperture of a window.

Window "rose"

Prominent feature of Gothic architecture:

Arch of the lancet form.

Interio
r.

In XII-XIII centuries did Color stained-glass windows. Ready color glasses cut according to figure, typed on a pattern, and then covered with a list. These elements fastened lead crosspieces and concluded in a metal frame.
