

Ecological Problems

Pollution and protection of our
environment

- **Ecology** is a science. Many sciences have such prefix.
- What does it mean “Eco”?
- “Eco” means “home” in Latin language. It’s a science about our mutual home – about nature.
- Science, which teaches us to treat very carefully to our homeland.
- **Environment** – is surroundings we live in.

People have always polluted their surroundings. Even in ancient times people admitted that their health was depending on the state of surroundings. But only in XX century humanity, in full measure, realized, that many diseases are closely connected with the air and water pollution and inferior products.

Ecological problems

air pollution

water pollution

soil pollution

Air pollution.

- **Air pollution is a very serious problem, because polluted air can cause illness and even death. Every year world industry pollutes the atmosphere with about 1500 million tons of dust and other harmful substances. Many cities suffer from smog, the oxygen balance upsets. Cars are polluting the air by exhaust gases and other dangerous chemicals.**

Virtually not only human beings pollute the air but nature itself can cause damage, for example volcanic eruptions.

But the consequences after volcanic eruptions aren't so harmful as human beings, in contrast to human activities, these processes are always reversible – though after a while the atmosphere will recover in former structure.

Water pollution

- Water resources is one of the main factors of existing life on our planet.
- People use fresh water for their needs. It is more than 2% of hydrosphere volume.
- First of all water pollution is the result of industrial, agricultural and everyday necessities discharge of wastes into rivers, lakes and seas.
- The main part of water pollution is caused by oil industry wastes.

Soil pollution

- The main component of the Earth biosphere represents topsoil.
- Soil is polluted by: litter, wastes, heavy metals, pesticides, radioactive elements.
- Sinking aerosol may contain heavy poisonous metals and it may lead to plants' ruin.

Modern ecological problems

greenhouse effect

acid rains

ozon layer

Ways of solving ecological problems

- I. Creation of different kinds of purification plants;
- II. Recycling.

- III Using of conservation technologies and rational distribution of industry.
- Creation of purification territorial systems.

Look how beautiful
our planet *can be*
