

# Stretching springs

Figure 2

# Hooke's law

Robert Hooke  
(1635-1703)

Hooke's Law:

$$F_{spring} = -kx$$

Spring constant  $k$

It takes twice as much force to stretch a spring twice as far.

$$F = kx$$

$F$  = Force applied on the spring

$k$  = spring constant

$x$  = extension of the spring
