# Sochi National Park

- 1983 is the year of birth of the Sochi National Park. This is one of the first parks in the country.

# Sochi National Park

- It was created to preserve and restore the pristine and natural local nature.

# Sochi National Park

- Its total area is 194 thousand hectares.

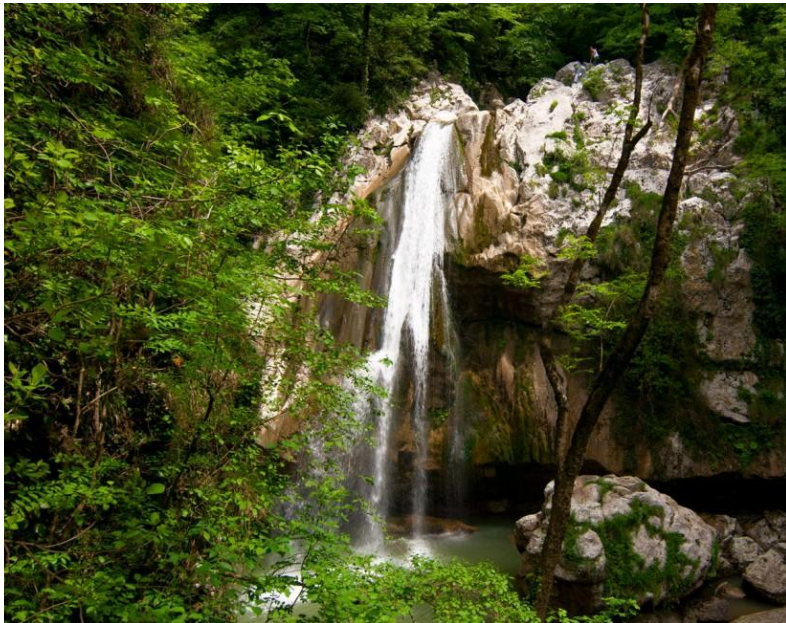

# Sochi National Park

- Located on the Black Sea Sochi Park slope of the Greater Caucasus in the north - western part.

# Sochi National Park

- Most of the park is covered by mountains, dissected by river valleys. Piedmont zone occupies a narrow strip along the Black Sea.
- In the park there are about 40 rivers and streams of the Black Sea basin.

# Sochi National Park

- The longest river - the Mzymta, followed by Shah and Psou. On the rivers formed numerous waterfalls and canyons. At the Psou River is the largest waterfall called Unnamed: his height is simply amazing - it is as much as 72 meters!

# Sochi National Park

- In the park you can see the interesting karst formations: Ahunskie known and Vorontsov Caves. You can also look at Orekhovskiy Angursky and waterfalls, visit the archaeological site "Dolmen".

# Sochi National Park

- The park is dominated by a subtropical climate, characterized by hot summers and mild winters warm.
- With its ideal climate, scarcity of many natural objects and untouched nature park has become an ideal place for leisure and tourism.

# Sochi National Park

- the vegetation of the National Park is simply amazing diversity. Many plants are represented by rare species, which are recorded in the Red Book of Russia. In a lot of meets here tulip Lipsky, Caucasian lily, common fig, as well as various species of orchids.

# Sochi National Park

- Only in this park trees grow luxurious, called - sown chestnuts.
- In the forests is very common oriental beech. This powerful and beautiful tree grows up to 50 meters.
- On the slopes dominated by dense oak stands.

# Sochi National Park

- National Park is inhabited by a huge number of mammals. This brown bear, Caucasian and European roe deer, lynx, deer, otter, marten and about 70 different kinds of animals. There are rare species of animals that are placed in the International Red Book: Krestovka is Caucasian, Caucasian viper, Aesculapian snake.

# Sochi National Park
