

V. Модуль и графики

Определение модуля

Модуль действительного числа a - это неотрицательное число (обозначается $|a|$), определяемое так: если $a \geq 0$, то $|a| = a$, если $a < 0$, то $|a| = -a$.

Например:

$$|3| = 3; \quad |0| = 0;$$

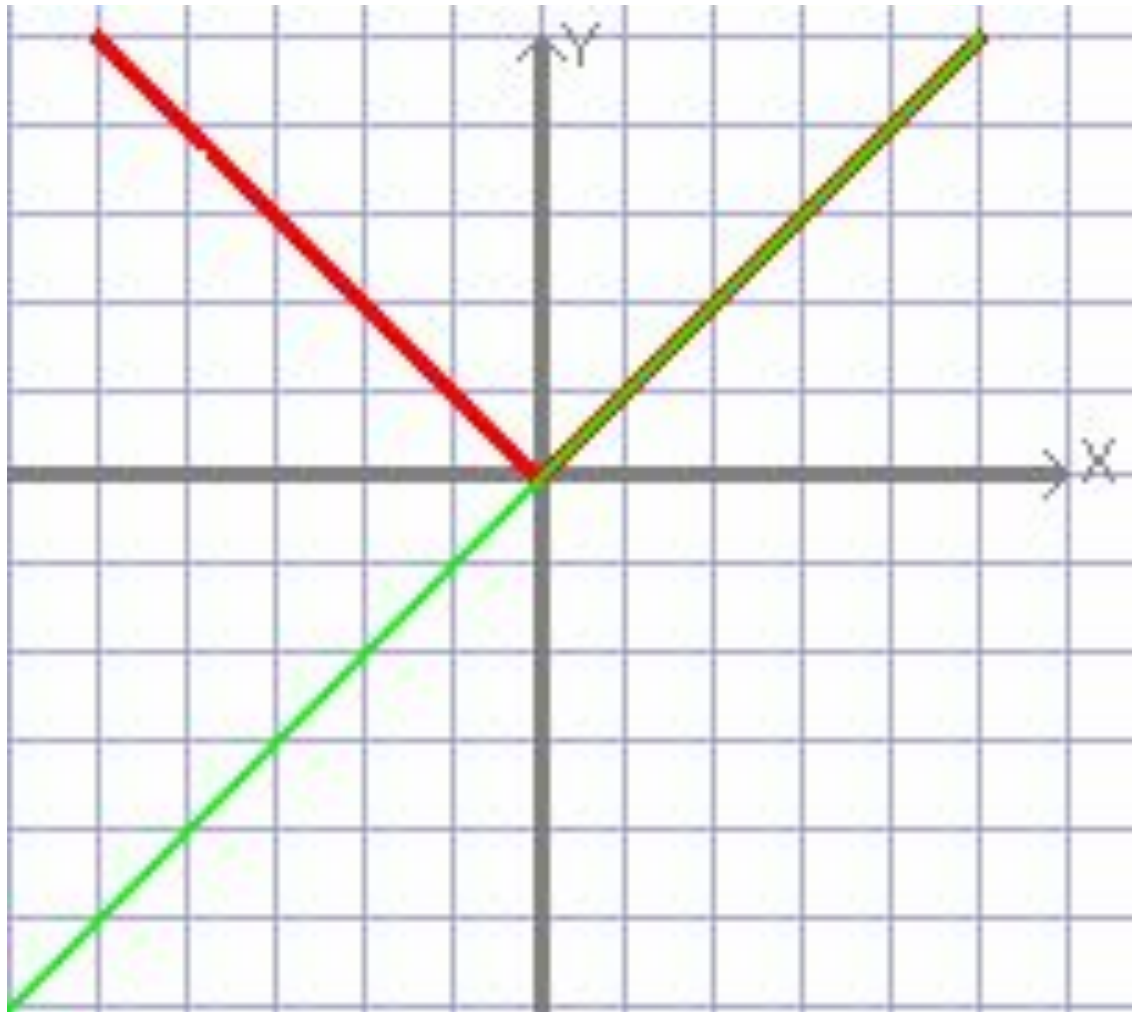

$$|-5| = -(-5) = 5.$$

$$|x| = \begin{cases} x, & \text{если } x \geq 0 \\ -x, & \text{если } x < 0 \end{cases}$$

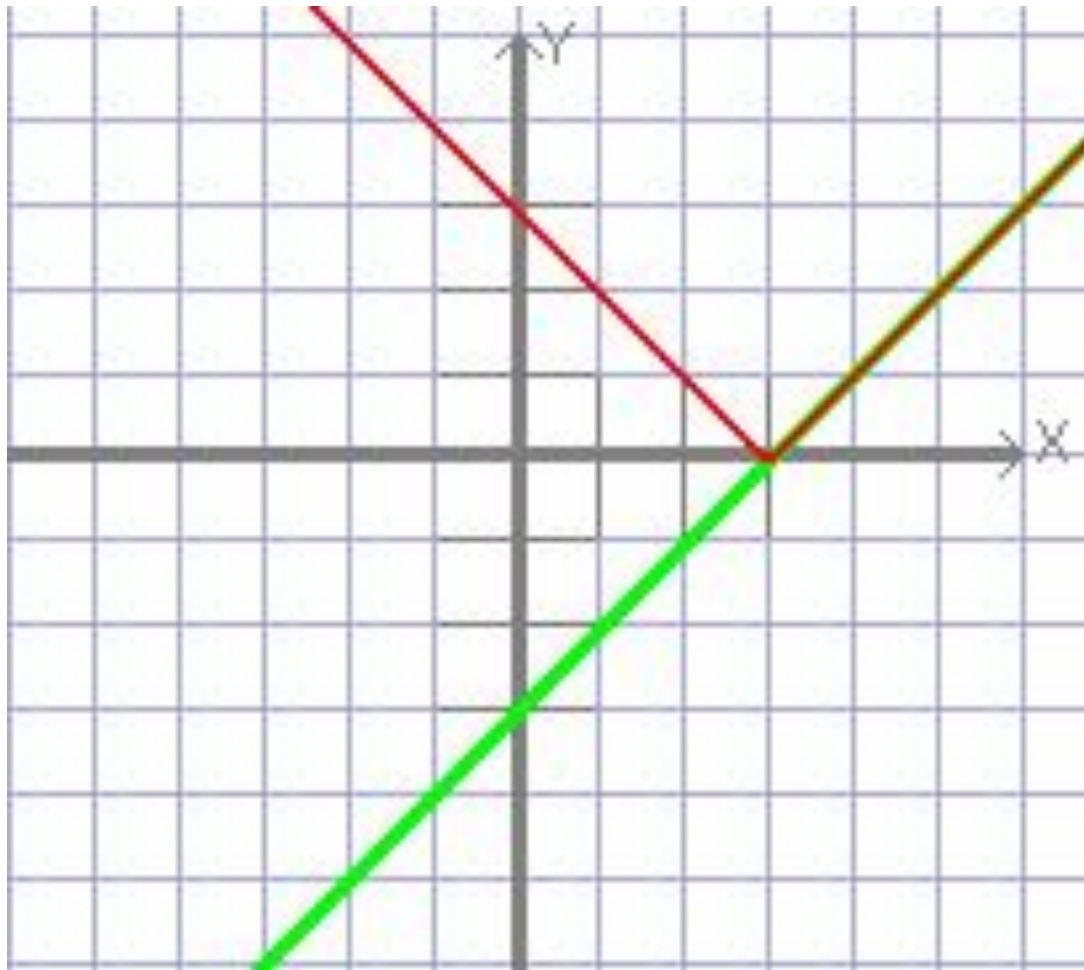

$$y = |x|$$

$$y = x$$

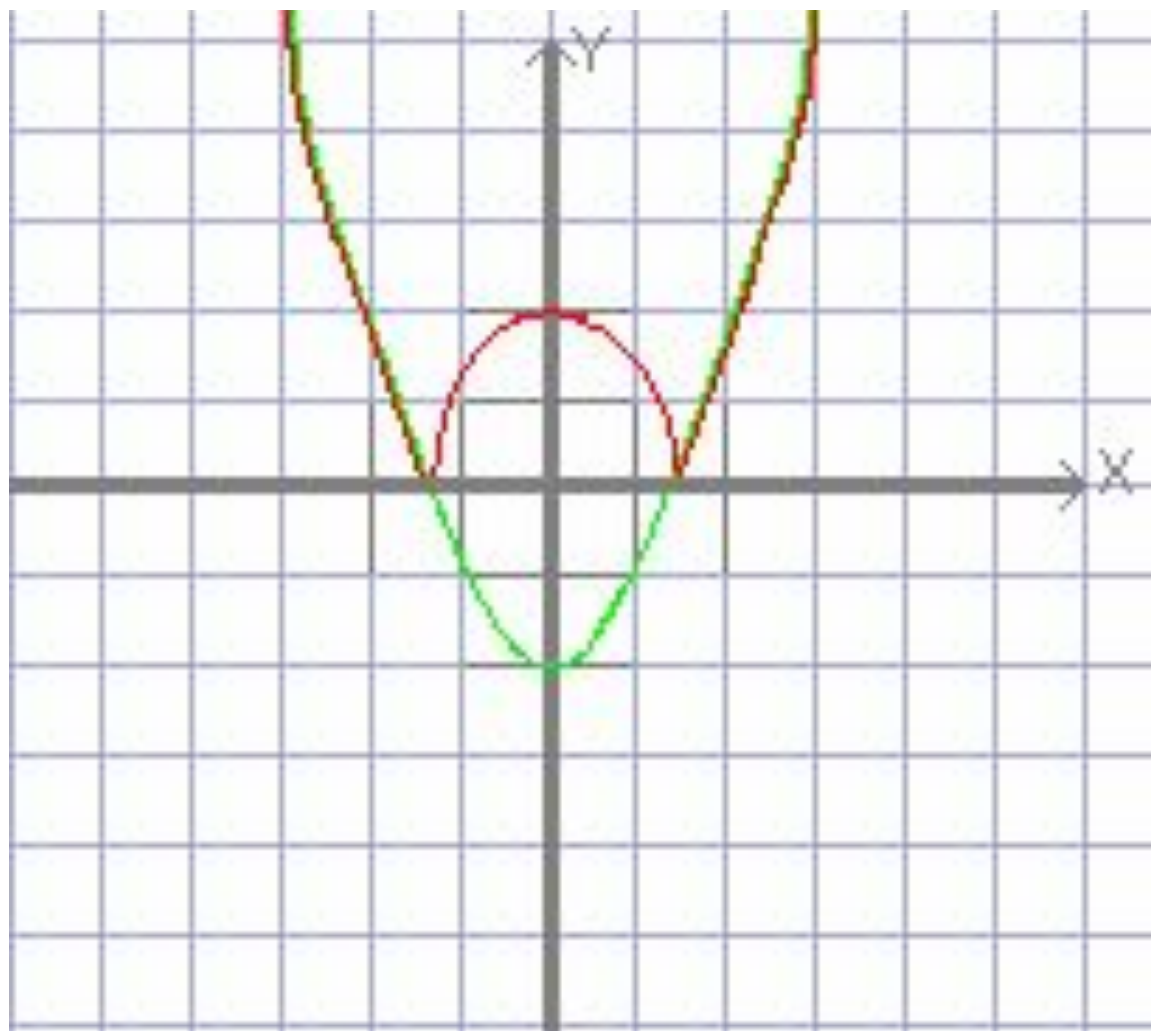

$$y = |x - 3|$$

$$y = x - 3$$

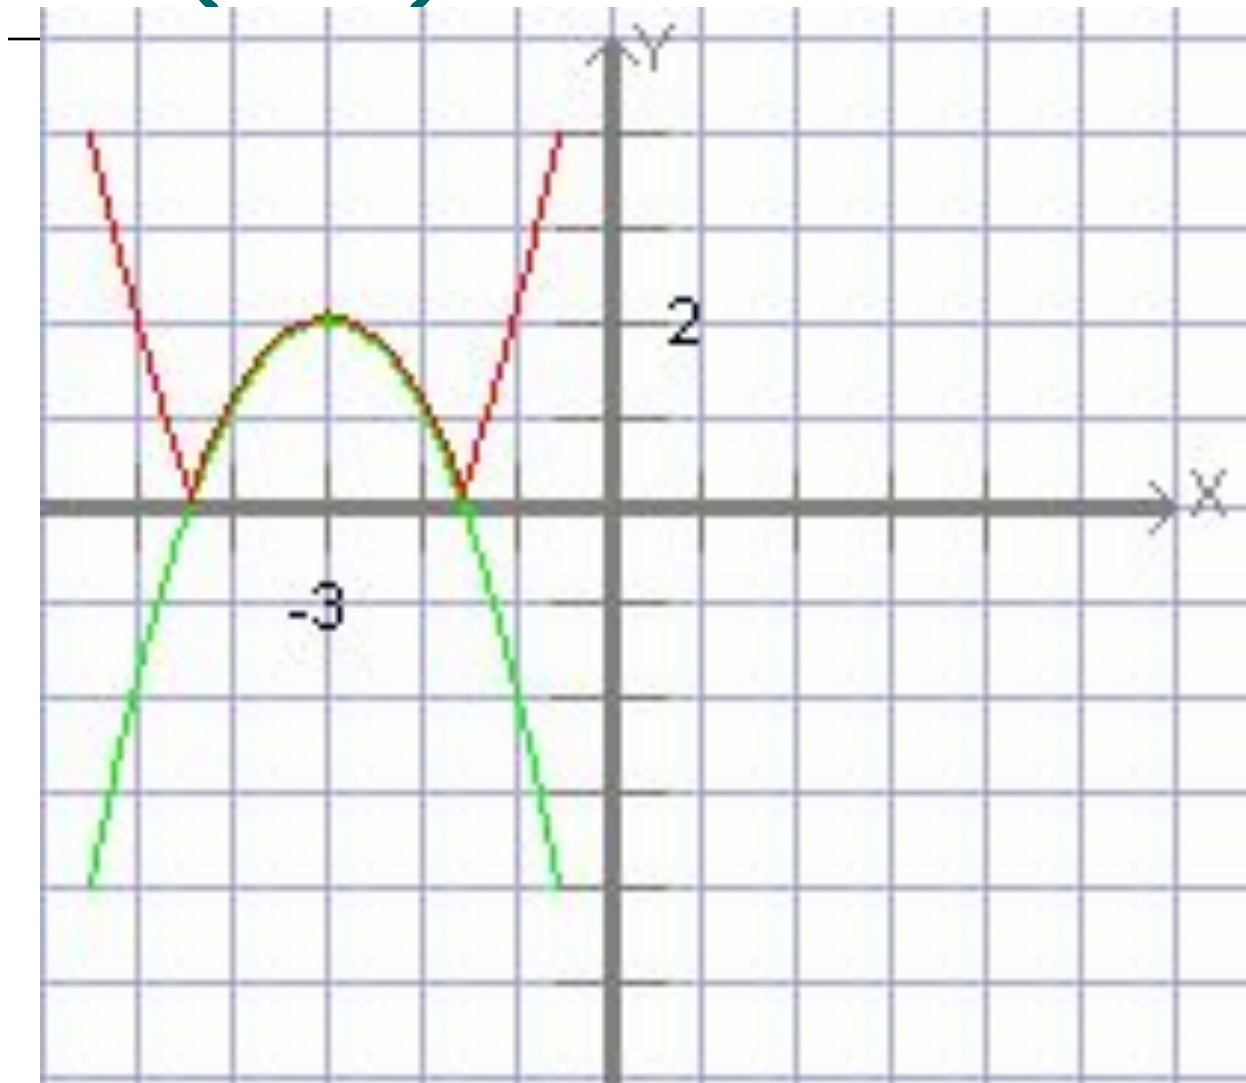

$$y = |x^2 - 2|$$

$$y = x^2 - 2$$

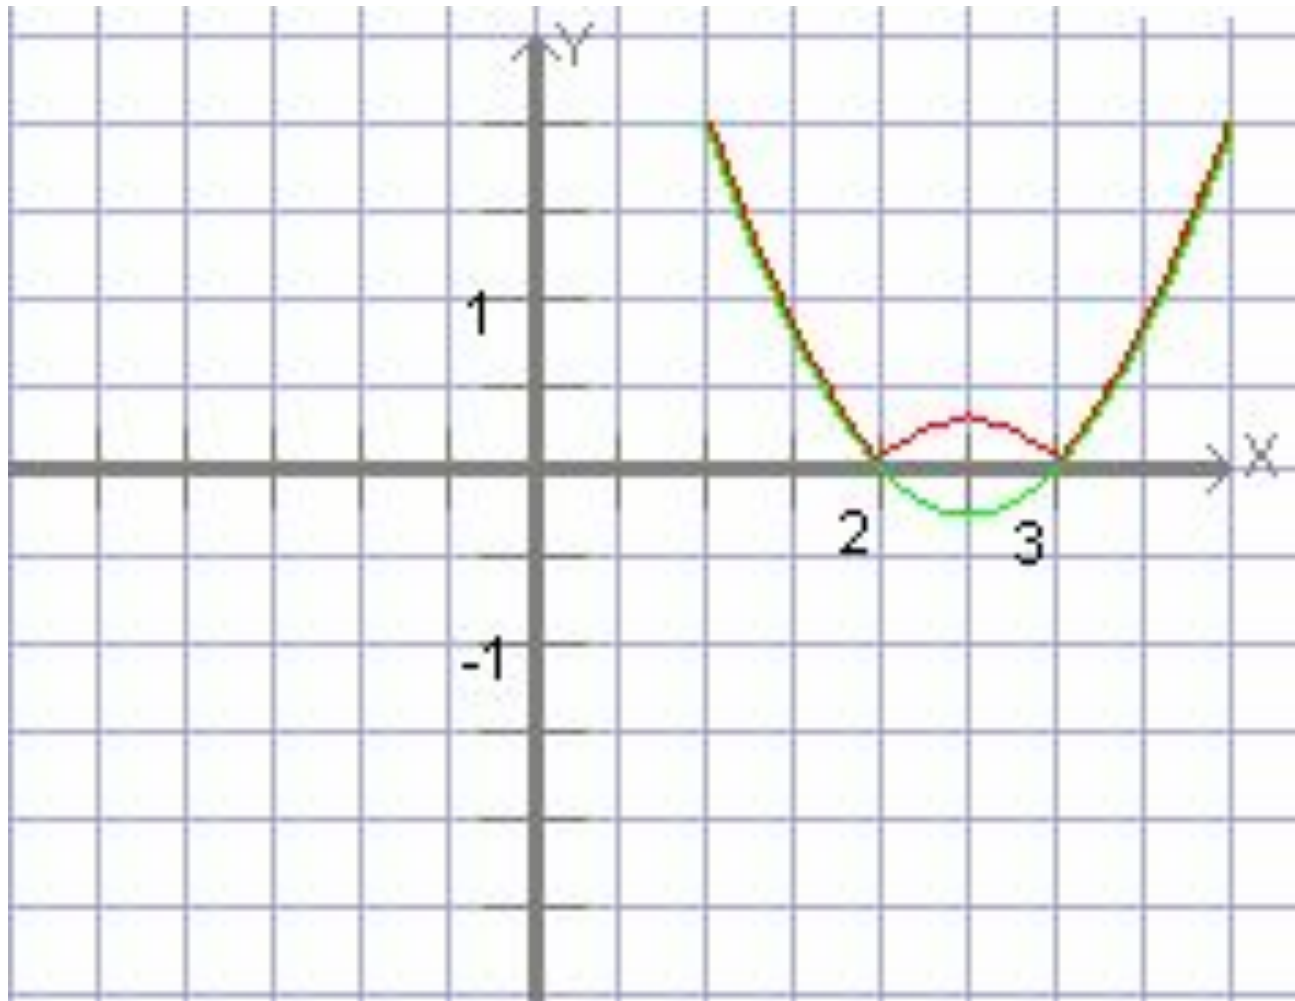

$$Y = -(X+3)^2 + 2$$

$$Y = |-(X+3)^2 + 2|$$

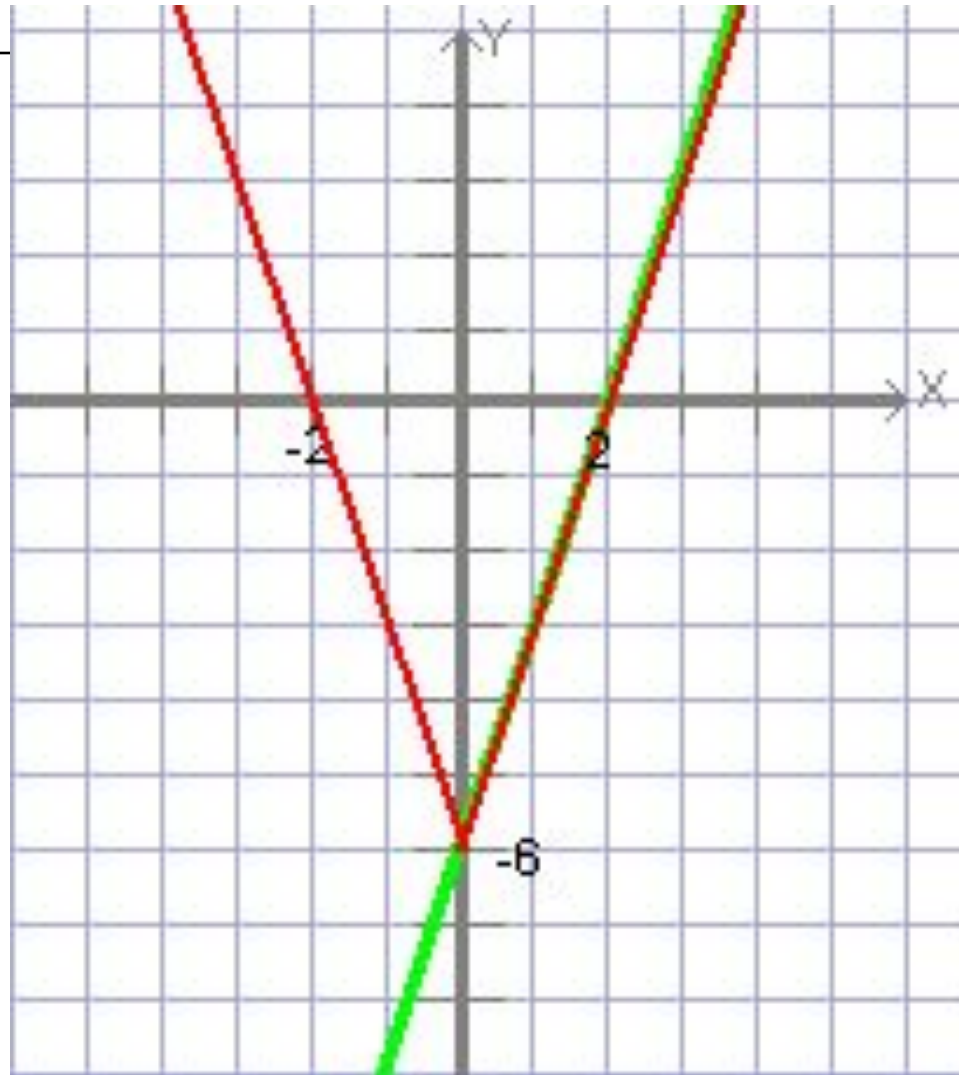

$$Y = X^2 - 5X + 6$$

$$Y = |X^2 - 5X + 6|$$

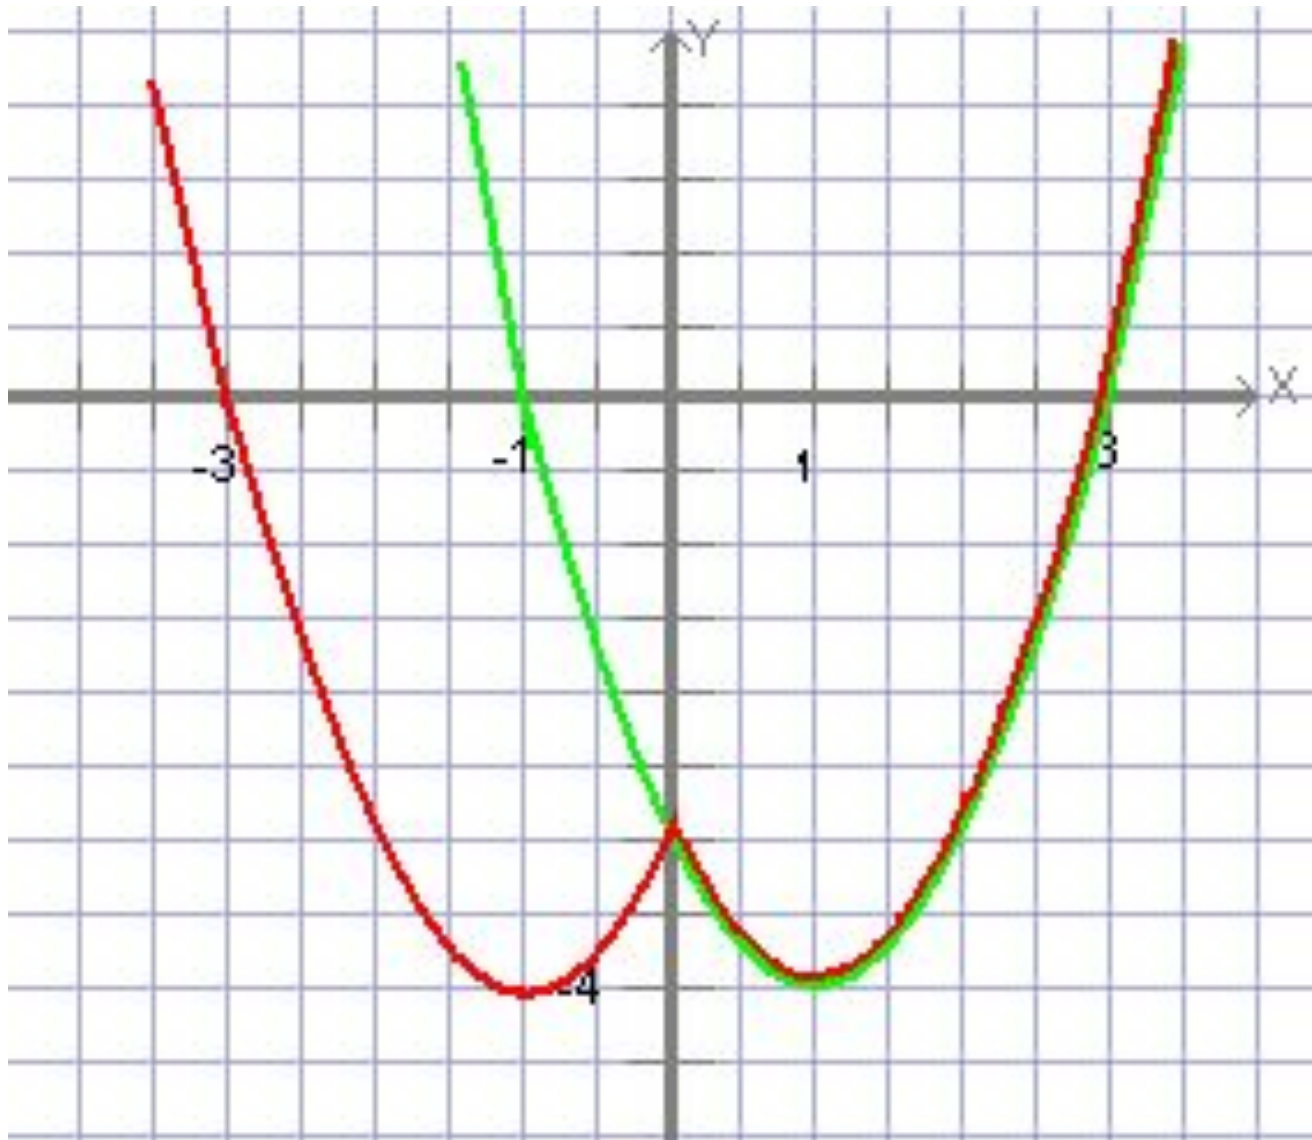

$$Y=3X-6$$

$$Y=3|X|-6$$

$$Y=X^2-2X-3$$

$$Y=X^2-2|X|-3$$

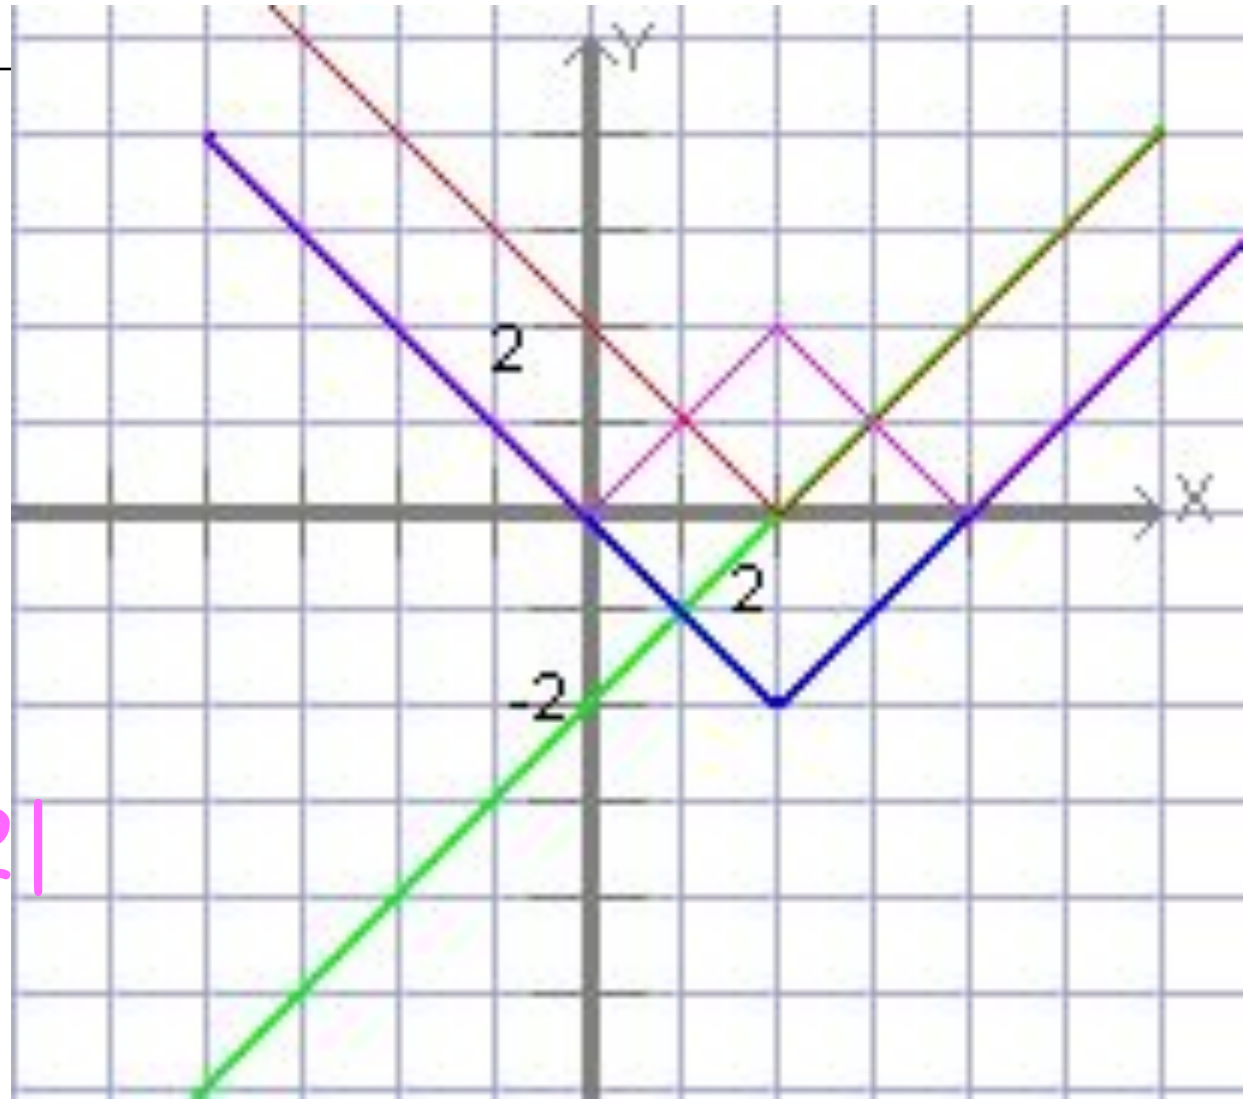

$$y = ||x-2|-2|$$

$$y = x - 2$$

$$y = |x-2|$$

$$y = |x-2| - 2$$

$$y = ||x-2|-2|$$

$$y = |x^2 - 5|x| + 6|$$

$$y = x^2 - 5x + 6$$

$$y = x^2 - 5|x| + 6$$

$$y = |x^2 - 5|x| + 6|$$
