Разделим каждое яблоко на три равные части, тогда каждый ребёнок получит по части, а каждая из этих частей равна значению каждого ребёнка получит яблока.

383. Пять одинаковых яблок нужно поровну разделить между тремя детьми. Сколько должен получить один ребёнок? Как сделать так, чтобы каждый получил свою долю?

Разделим каждое яблоко на три равные части, тогда каждый ребёнок получит по одной части, а каждая из этих частей равна значению $\frac{1}{3}$ яблока. Значит каждый ребёнок получит $\frac{5}{3}$ яблока.

1 способ

$$\frac{5}{3}$$

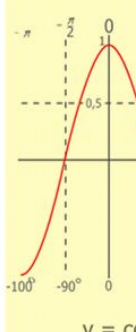

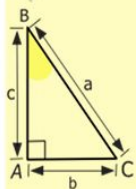

$$\begin{cases} y = \sin 90 \\ x = 25y + 45 \\ y = 1 \\ x = 25 + 45 \\ x = 70 \end{cases}$$

$$(x+y)(x-y) = x^2 - y^2$$

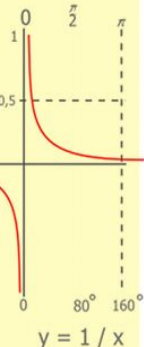

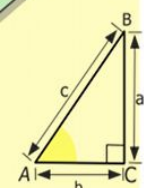

$$\sin 90^\circ = 1$$

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$

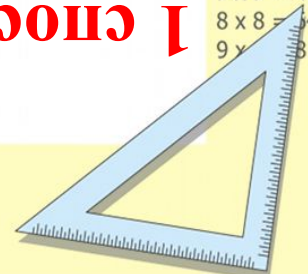

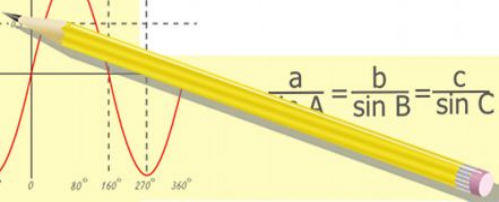

$$\frac{a}{c} + \frac{b}{c} = \frac{a+b}{c}$$

2 x 2 = 4
3 x 3 = 9
4 x 4 = 16
5 x 5 = 25
6 x 6 = 36
7 x 7 = 49
8 x 8 = 64
9 x 9 = 81

	105 0 00

2 способ.

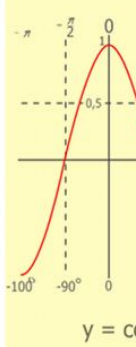

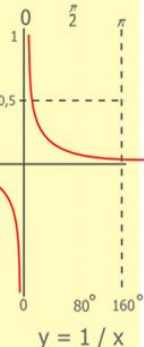

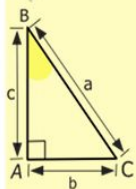

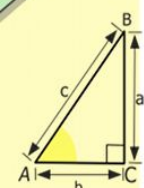

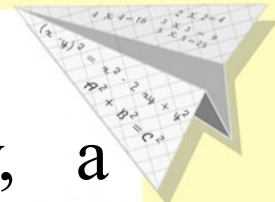

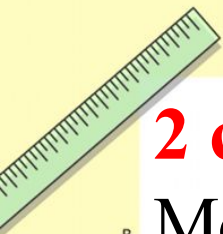

Можно дать каждому ребёнку по яблоку, а оставшиеся два яблока разделить между ними поровну

Тогда каждый из детей получит $1 + \frac{2}{3}$ яблока.

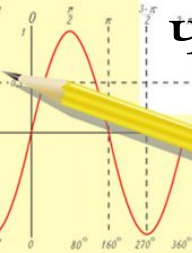

Сумму $1 + \frac{2}{3}$ записывают короче: $1\frac{2}{3}$ и

читают: «одна целая две третьих».

$$\begin{array}{r} 1 \\ \times 2500 \\ \hline 2500 \\ + 42 \\ \hline 210 \\ + 84 \\ \hline 105000 \end{array}$$

- $2 \times 2 = 4$
- $3 \times 3 = 9$
- $4 \times 4 = 16$
- $5 \times 5 = 25$
- $6 \times 6 = 36$
- $7 \times 7 = 49$
- $8 \times 8 = 64$
- $9 \times 9 = 81$

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$

$$\frac{a}{c} + \frac{b}{c} = \frac{a+b}{c}$$

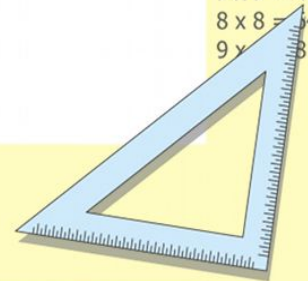

$$\sin 90^\circ = 1$$

$$\begin{cases} y = \sin 90 \\ x = 25y + 45 \end{cases}$$

$$\begin{cases} y = 1 \\ x = 25 + 45 \\ \hline x = 70 \end{cases}$$

$$(x+y)(x-y) = x^2 - y^2$$

В числе $1\frac{2}{3}$ число 1 называют **целой частью**, а

число $\frac{2}{3}$ - его **дробной частью**.

Так как в обоих случаях каждый ребёнок

получает одно и то же количество яблок, то числа

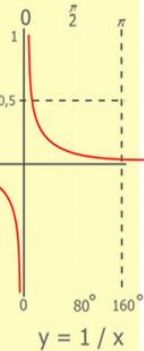

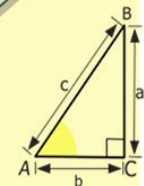

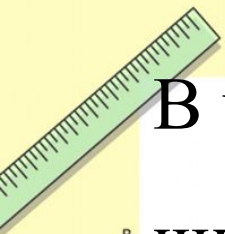

$\frac{5}{3}$ и $1\frac{2}{3}$ равны, т.е. $\frac{5}{3} = 1\frac{2}{3}$.

Чтобы из $\frac{5}{3}$ получить $1\frac{2}{3}$, надо разделить 5 на 3.

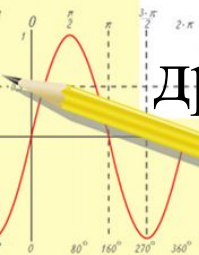

Получим неполное частное 1 и остаток 2. Число 1

даёт целую часть, а остаток 2 – числитель

дробной части.
