Холмс. Добрый день, Нелли. Что вы делаете?

Нелли. Добрый день, Холмс! У меня странные письма сегодня, и я не могу на них ответить.

Холмс. Дайте мне посмотреть. Ну, они действительно странные, и у нас есть только один день для расследования этих случаев.

Нелли. Я думаю, Холмс, нам нужна помощь.

Холмс. Вы правы, Нелли. Давайте обратимся за помощью к детективным агентствам.

Нелли. Ой, смотрите! Вот как раз два из них! Уважаемые детективные агентства! Вы проведете расследование некоторых случаев и получите за это гонорар.

Холмс. Вот первый случай. Выберите номер вопроса и ответьте на него.

1. Труды этого математика были почти единственным руководством по одному из разделов математики в школе. Он самоотверженно любил науку и никогда не допускал неискренности. Однажды древнегреческий царь Птоломей, который правил в египетской Александрии, потребовал у объяснявшего ему законы геометрии математика сделать это покороче и побыстрее. Тот ответил: «О великий царь, в геометрии нет царских дорог...» В истории Западного мира его книга после Библии, вероятно, издавалась наибольшее число раз и более всего изучалась.

1. С развитием математики возникла потребность пользоваться, помимо целых чисел, и другими. Сначала их называли «ломаными числами». Позже их назвали дробями. Запись дроби с помощью числителя и знаменателя появилась в Древней Греции, только греки записывали числитель снизу, а знаменатель – сверху. Дроби в привычном для нас виде впервые стали записывать индусы (около 1500 лет назад). В старину в основном применялись дроби со знаменателем 12, 16 или 40. Позже появились более удобные знаменатели. А в XVII–XVIII вв. дроби получили всеобщее распространение, особенно после введения метрической системы в большинстве стран мира.

2. He was an English physicist, mathematician, astronomer, natural philosopher, alchemist, and theologian. His monograph *Philosophic Naturalis Principia Mathematica*, published in 1687, lays the foundations for most of classical mechanics. In this work, he described universal gravitation and the three laws of motion, which dominated the scientific view of the physical universe for the next three centuries. This person showed that the motions of objects on Earth and of celestial bodies are governed by the same set of natural laws.

Question: name the person.

$$\begin{array}{r} 2500 \\ \times 42 \\ \hline 210 \\ + 84 \\ \hline 10500 \end{array}$$

$$\begin{array}{l} 2 \times 2 = 4 \\ 3 \times 3 = 9 \\ 4 \times 4 = 16 \\ 5 \times 5 = 25 \\ 6 \times 6 = 36 \\ 7 \times 7 = 49 \\ 8 \times 8 = 64 \\ 9 \times 9 = 81 \end{array}$$

$$\frac{a}{A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$

$$\frac{a}{c} + \frac{b}{c} = \frac{a+b}{c}$$

$$\sin 90^\circ = 1$$

$$\begin{cases} y = \sin 90 \\ x = 25y + 45 \end{cases}$$

$$\begin{cases} y = 1 \\ x = 25 + 45 \end{cases}$$

$$x = 70$$

$$(x+y)(x-y) = x^2 - y^2$$

Конверт №2

2. Он был английским физиком, математиком, астрономом, философом, алхимиком и теологом. Его монография «Математические принципы естественной философии» была опубликована в 1687 г., содержит основы механики. В своей работе он описывает земное притяжение и три закона движения, открытие которых послужило изучению вселенной в последующие три столетия. Этот человек показал, что движение предметов на Земле и небесных тел происходит по одним законам.
