Karagandy.2016.

- Dental clinics provide patients with preventive and standard dental care, including emergency dental care.

- Services include teeth cleanings, teeth whitening, x-rays, root canals, crowns, fillings and orthodontics.

- According to the American Dental Association, nearly all dentists are in private practice. Specifically, it is estimated as many as three out of four dentists are solo practitioners. Private practitioners work as licensed, self-employed dentists.

Because of the relatively small size of the organization, usually patients get more personalized care from private practitioners.

Unlike private practices in which one dentist operates a clinic by himself, a group practice is an association of dental professionals.

- These professionals work together, sharing space and using the same equipment.
