SUMMARY

“Renovation (also called remodeling) is the process of improving a broken, damaged, or outdated structure” [1]. Architecture is represented by specific society phenomenon. Territories and poli-ethnic population was multiply involved in major political and economic cataclysms within centuries-old history, alternating by periods of relatively even development. It was naturally reflected on the environment formation. Moreover, every time this process was corrected considering different levels stability of natural – climate and engineering – geological conditions of different areas, availability of local and delivered construction materials, production resources development levels, economics specifics, morals and manner of people, period of residence in the present area and administrative-territorial divisions formed and dissolved public authorities. Buildings and structures are a reflection of these processes.

The renovation process allows adapting buildings to changing of public or personal priorities.

To illustrate this interesting phenomenon allocated **79 (55/Kazakhstan's + 24/Foreign)** typical examples of buildings. Examples are distributed in chronological order of the last construct completion (**renovation**). Images sources are indicated directly near with illustrations on each page. Architects and companies listed on the basis of aggregate data from different sources (for some objects from various sources indicate different authors). About some buildings listed authors in the available sources has not yet been found.

The Author expresses his gratitude to Internet resources – <https://www.google.com> ; <https://www.wikipedia.org> – which to provide the ability to collect an information.

This Album generated for information purposes of **the Educational course "The Architectural renovation, restoration, reconstruction and rebuilding"**.
