

TV or NOT
TV

- What is television?
- History
- Models
- Questionnaire survey
- Conclusion

We have a lot of different gadgets at home. One of the most widespread is TV. But we want to know: Is it so important nowadays? Can modern inventions replace it?

What is television?

- Television (TV) is a telecommunication medium for transmitting and receiving moving images that can be monochrome (black-and-white) or colored, with or without accompanying sound. "Television" may also refer specifically to a television set, television programming, or television transmission.

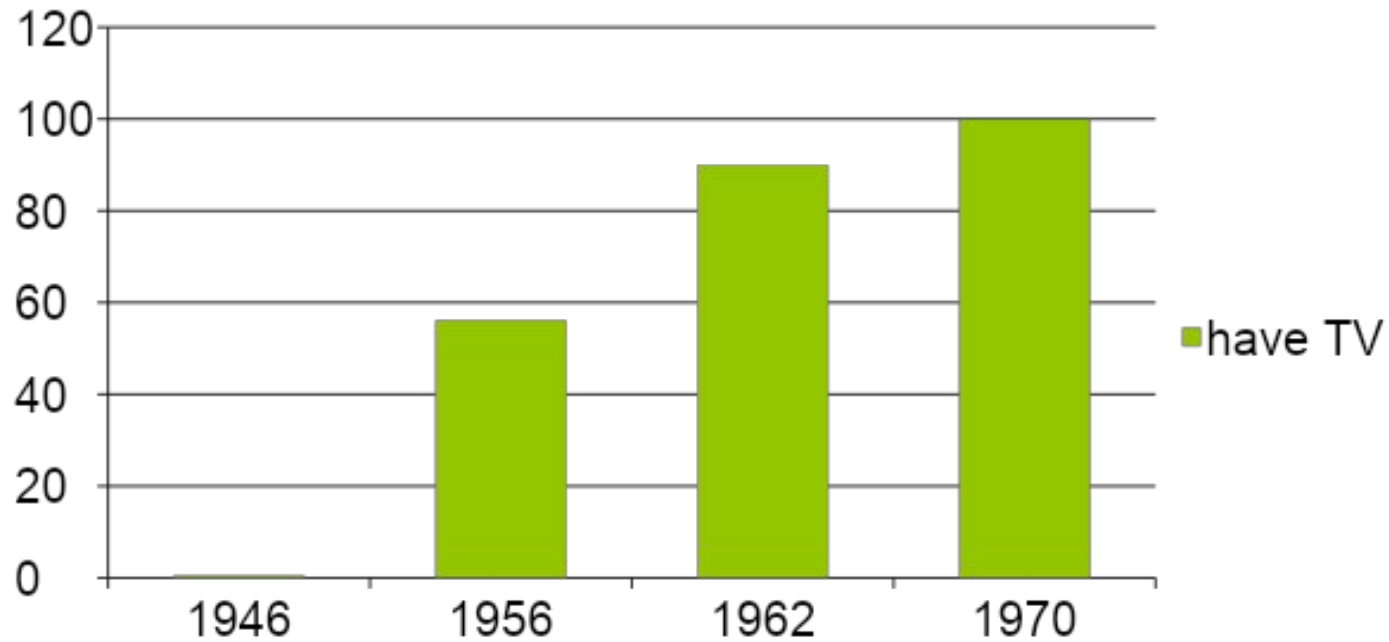

History

- Mechanical televisions were commercially sold from 1928 to 1934 in the United Kingdom, United States, and Soviet Union.
- The first commercially made electronic televisions with cathode ray tubes were manufactured by Telefunken in Germany in 1934, followed by other makers in France (1936), Britain (1936), and America (1938).

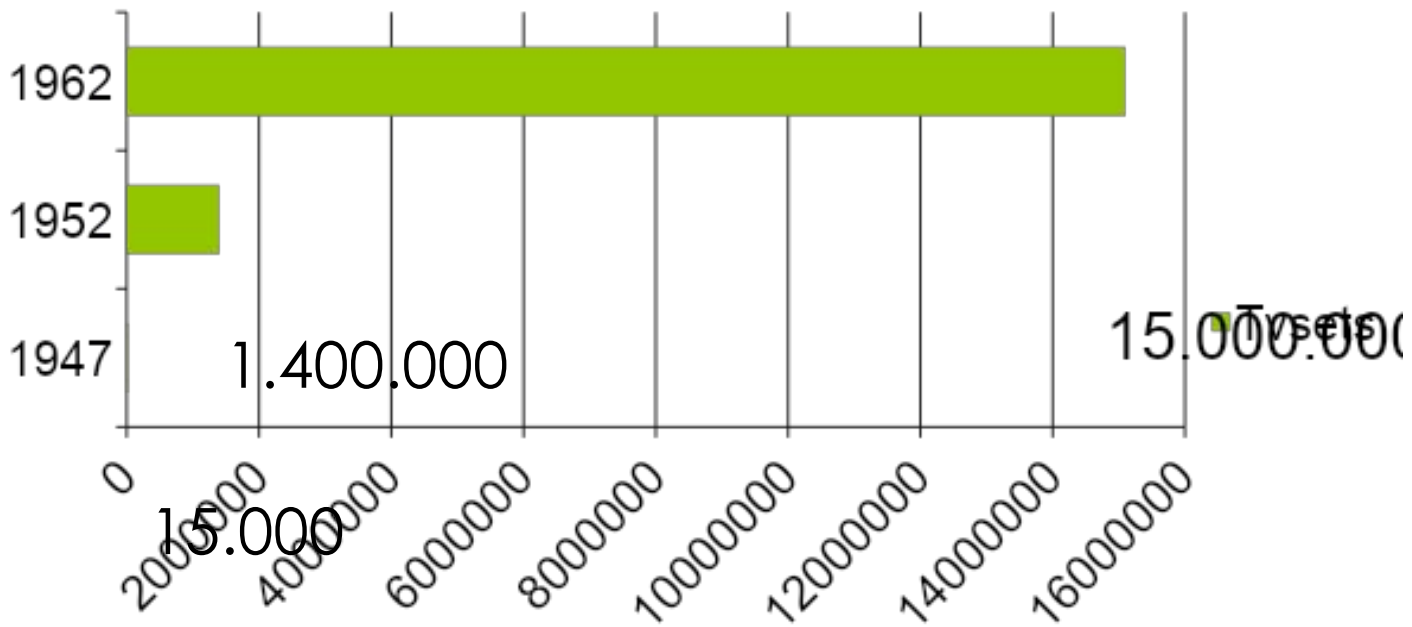

Television usage

- Television usage in the world skyrocketed after World War II with the lifting of the manufacturing freeze, war-related technological advances, the gradual expansion of the television networks westward, the drop in television prices caused by mass production, increased leisure time, and additional disposable income.

Households in the USA have TV

In the UK amount of TV sets increased
