Look the ground of a spot above ground. Below the surface, the Earth's crust is broken into plates that move together to form the Earth's fractured surface. The ground changes as the plates slide over the hot, molten mantle beneath. Some plates collide and some plates pull apart. The plates are constantly moving, and the ground is constantly changing. The ground is constantly changing, and the ground is constantly changing.

- Map Key**
- Major Plate
 - Minor Plate
 - Spreading Center
 - Subduction Zone
 - Transform Fault
 - Hot Spot

Earthquakes

Earthquakes occur when the ground is broken and the pieces move. The ground is constantly changing, and the ground is constantly changing.

Spreading Centers

Spreading centers are where two plates move apart. The ground is constantly changing, and the ground is constantly changing.

Volcanoes

Volcanoes are where the ground is broken and the pieces move. The ground is constantly changing, and the ground is constantly changing.

Subduction Zones

Subduction zones are where one plate moves under another. The ground is constantly changing, and the ground is constantly changing.

Transform Faults

Transform faults are where two plates slide past each other. The ground is constantly changing, and the ground is constantly changing.

Hot Spots

Hot spots are where the ground is broken and the pieces move. The ground is constantly changing, and the ground is constantly changing.
