

parents' responses to their children's misbehavior. In addition, we examined the relationship between parenting and child outcomes.

The results of this study support previous research that found that parenting is influenced by culture (e.g., Hwang & Kim, 1997).

Specifically, the results indicated that the parenting of Korean immigrant parents was more authoritarian than that of European American parents. This finding is consistent with previous research (e.g., Hwang & Kim, 1997; Kim, 1995; Kim, 1997).

However, the results also indicated that Korean immigrant parents were more permissive than European American parents. This finding is inconsistent with previous research (e.g., Hwang & Kim, 1997; Kim, 1995; Kim, 1997).

These findings suggest that Korean immigrant parents' parenting is more authoritarian than European American parents' parenting, but less strict than European American parents' parenting. This finding is consistent with previous research (e.g., Hwang & Kim, 1997; Kim, 1995; Kim, 1997).

These findings also suggest that Korean immigrant parents' parenting is more permissive than European American parents' parenting. This finding is inconsistent with previous research (e.g., Hwang & Kim, 1997; Kim, 1995; Kim, 1997).

These findings suggest that Korean immigrant parents' parenting is more authoritarian than European American parents' parenting, but less strict than European American parents' parenting. This finding is consistent with previous research (e.g., Hwang & Kim, 1997; Kim, 1995; Kim, 1997).

parents' responses to their children's misbehavior. In addition, we examined the relationship between parents' responses to misbehavior and the child's behavior problems.

The results of this study suggest that parenting is influenced by culture and that parenting in one culture may not be appropriate for another culture.

It is important to note that the results of this study were based on a convenience sample of mothers from two cultures. Therefore, the findings cannot be generalized to all mothers from these cultures.

However, the findings do provide some information about parenting in two different cultures and how it may differ.

The results of this study suggest that parenting in one culture may not be appropriate for another culture. This finding is consistent with previous research (e.g., Hwang & Kim, 1997).
