

Is a straight line drawn through the center of the celestial sphere parallel to the axis of rotation of the Earth. Around the axis of rotation of the Visible World celestial sphere.

## AXIS OF THE WORLD

- 
- Axis of the world coincides with the axis of rotation of the Earth in the geocentric celestial sphere (its center is placed at the center of the Earth). In topocentric celestial sphere (its center is placed at the point where the observer) is parallel to the axis of the world axis of rotation of the Earth.

-

- Even in ancient times, it was observed that the apparent rotation of the sphere takes place around some invisible axis. Visible observer rotation sky from east to west due to actual rotation of the Earth from west to east.
