

Chinese one child policy

How Chinese government planned it

- 1) Slow the growth of population
- 2) Take taxes from 2 children family
- 3) Decrease waste of resources

1959-1969 Plan(NOT A POLICY)

- 1) Try to give all unemployment people work .Fail
- 2) Make the period between children birth longer. Fail
- 3) Don't have the 3 child . Fail
- 4) Don't have a child if you are not young Family. Fail

1969-1980

- 1) You can't have 2 children if you are not living in a village
- 2) If you have a second child you should spend 12 000\$ for his birth and 35 000 Y for the period
- 3) If you have 3 children you will pay double taxes

1969-1980

- 1) Take taxes from families that have 2 or more children
- 2) Increase the amount of food recourses
- 3) Decrease the unemployment

Effect

1980-2013

- 1) You can't have 2 child if you are not living in village
- 2) If you and you husband/wife is singleton you can make 2 child
- 2) If you have second Child you should spend 12 000\$ for his birth and 35 000 Y for the period
- 3) If you have 3 children you will pay double taxes

- What really happened!

Effect

- 400 000 000 embryos.
- 3 150 000 000 dollars.
- *120 000 000 millions of female embryos*
1970 .1. 25 billion – 1.12 billion of below 60
2012. 1.34 billion – 0.93 billion of people below
60
Millions of women lost

- Is it right

We believe in
good future
