

GLOBAL WARMING G

The atmosphere already has
a natural supply of
“greenhouse gases”

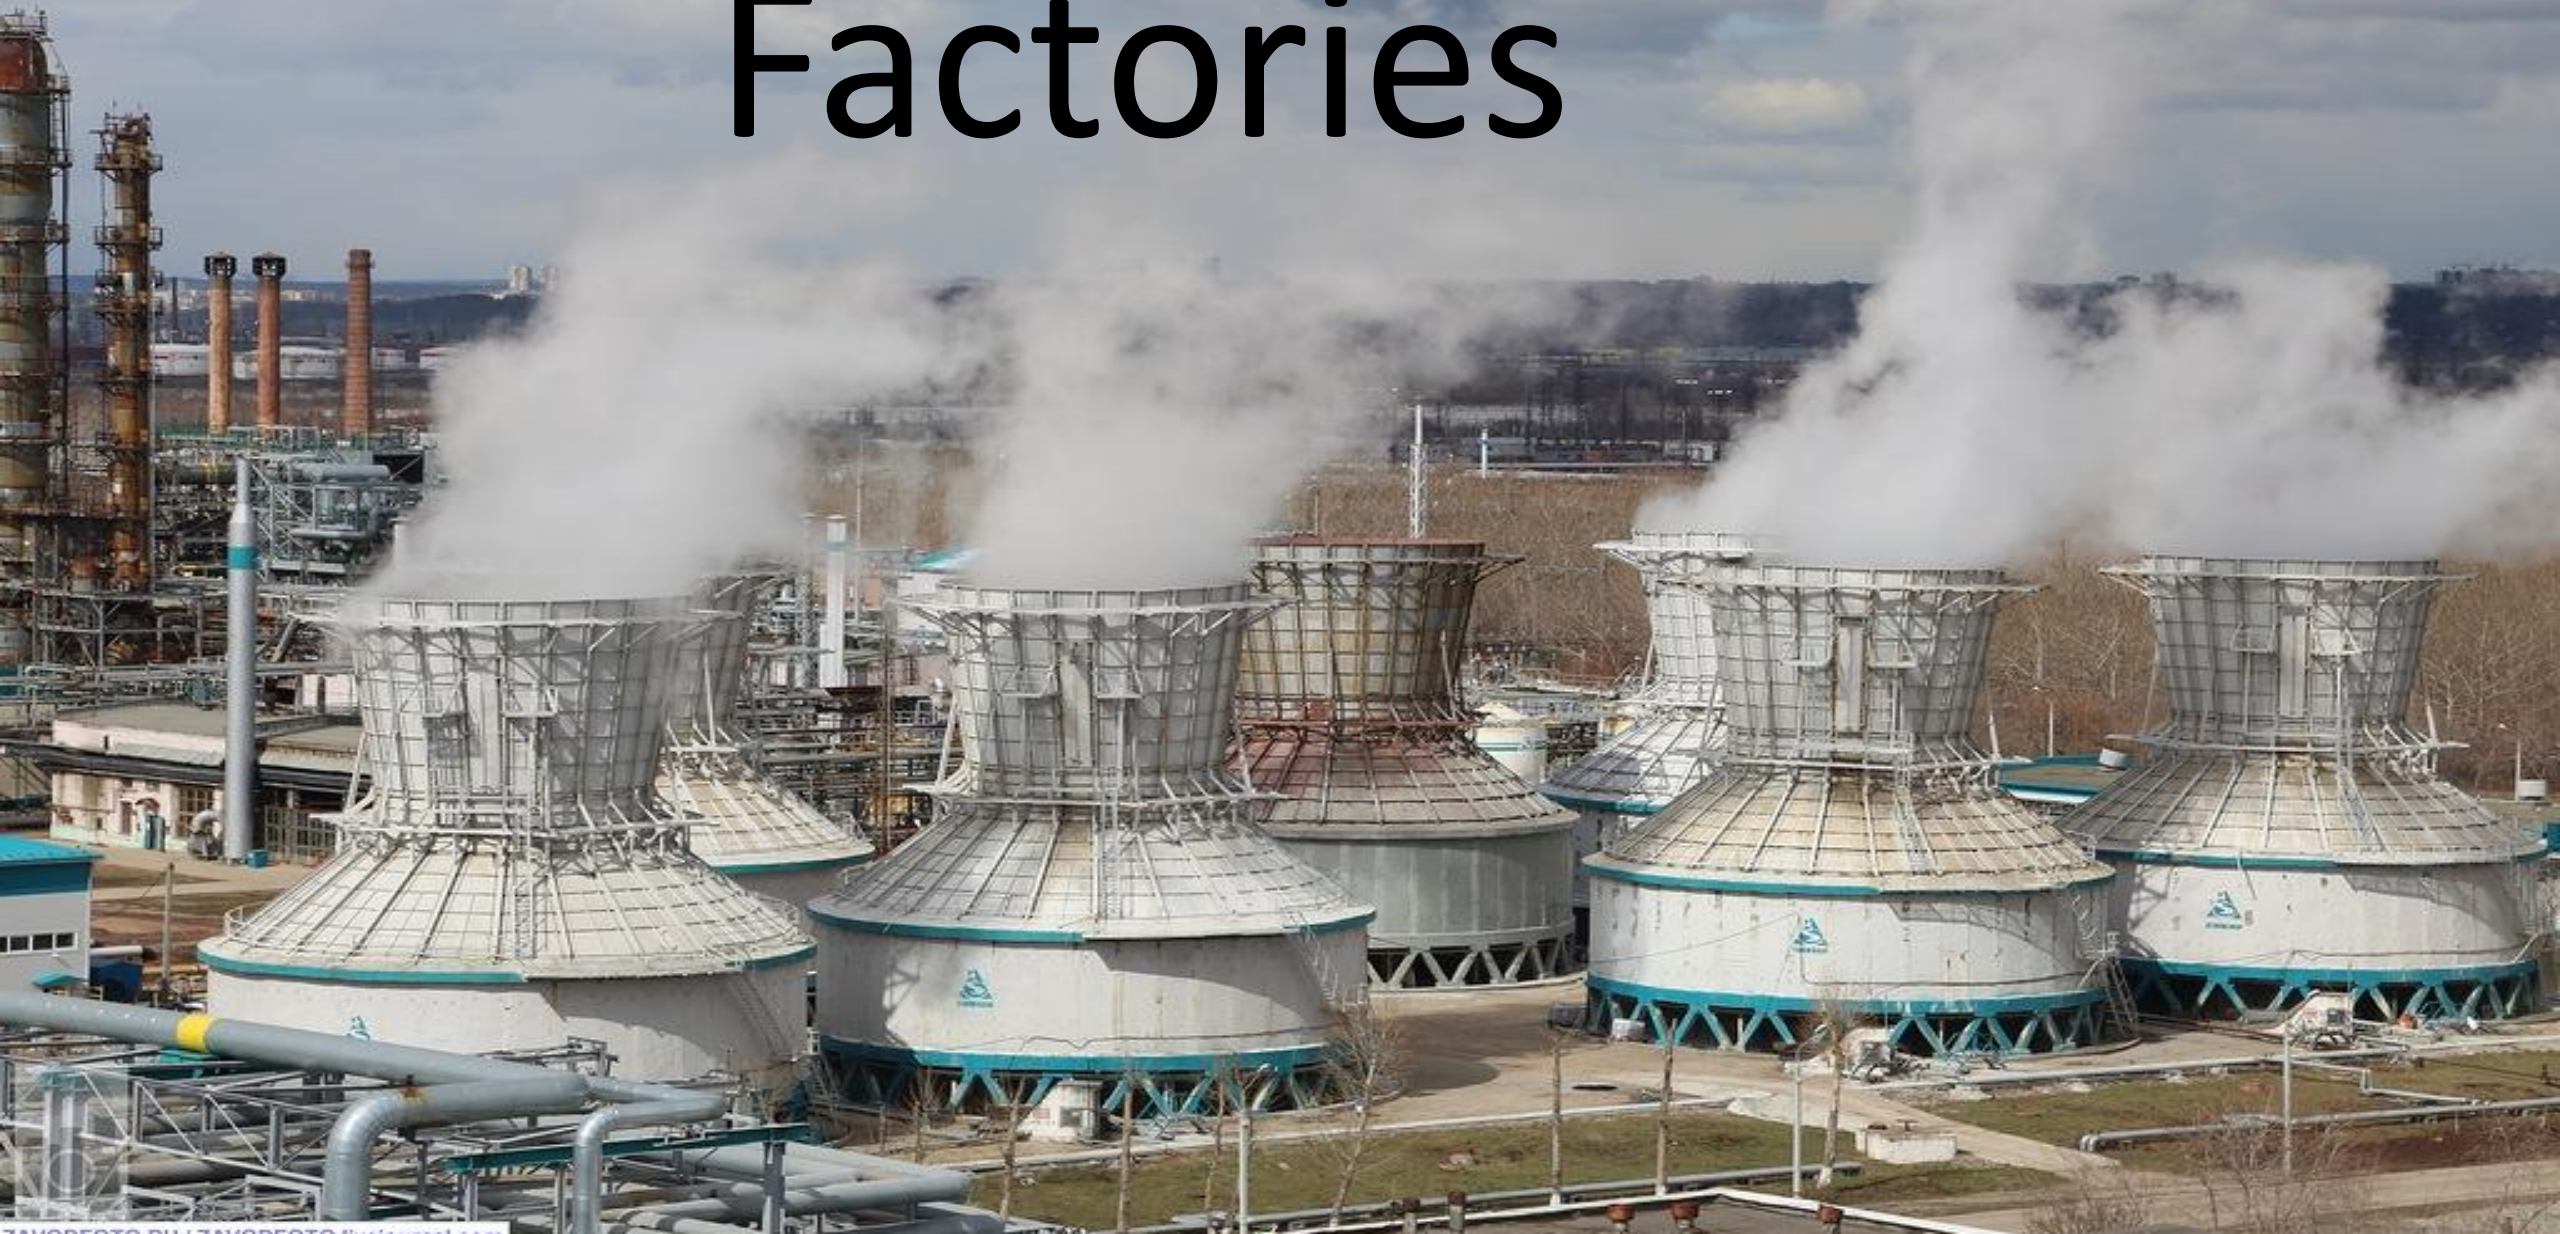

They capture heat and keep Earth
warm enough for us to live in

uninhabitable frozen wasteland

Factories

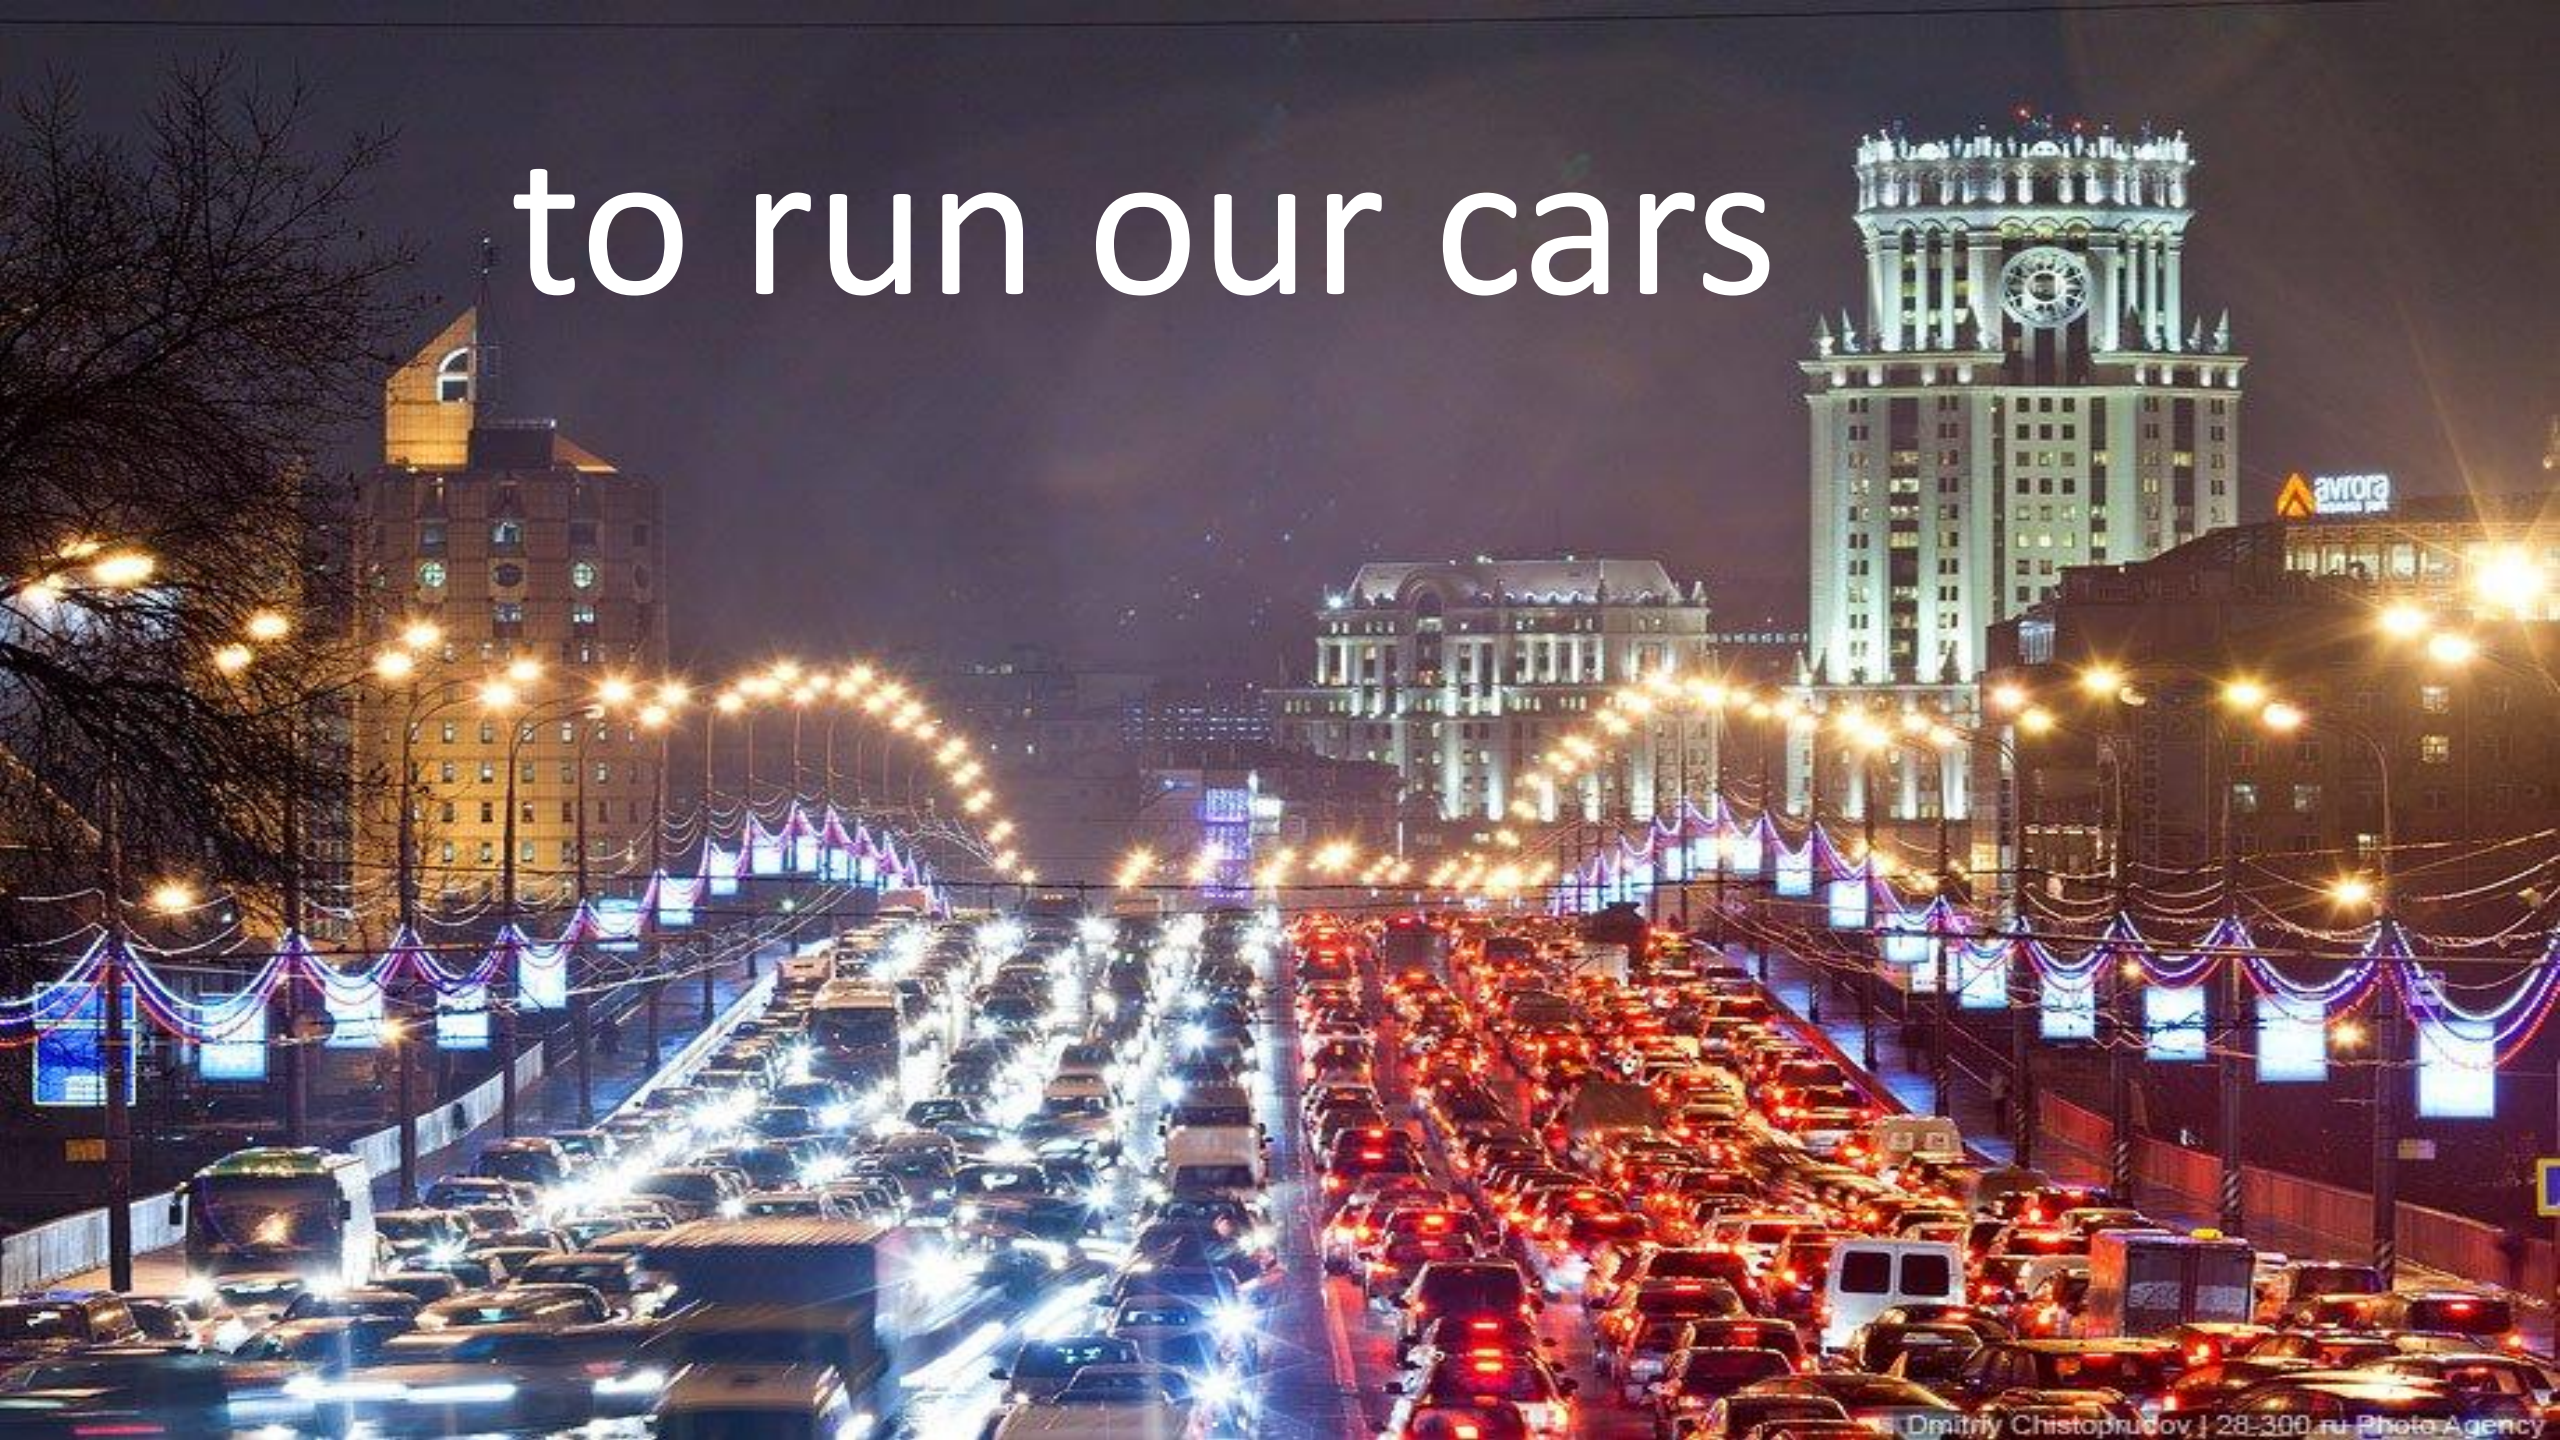

Burn more and more

fossil fuels

to run our cars

Planes

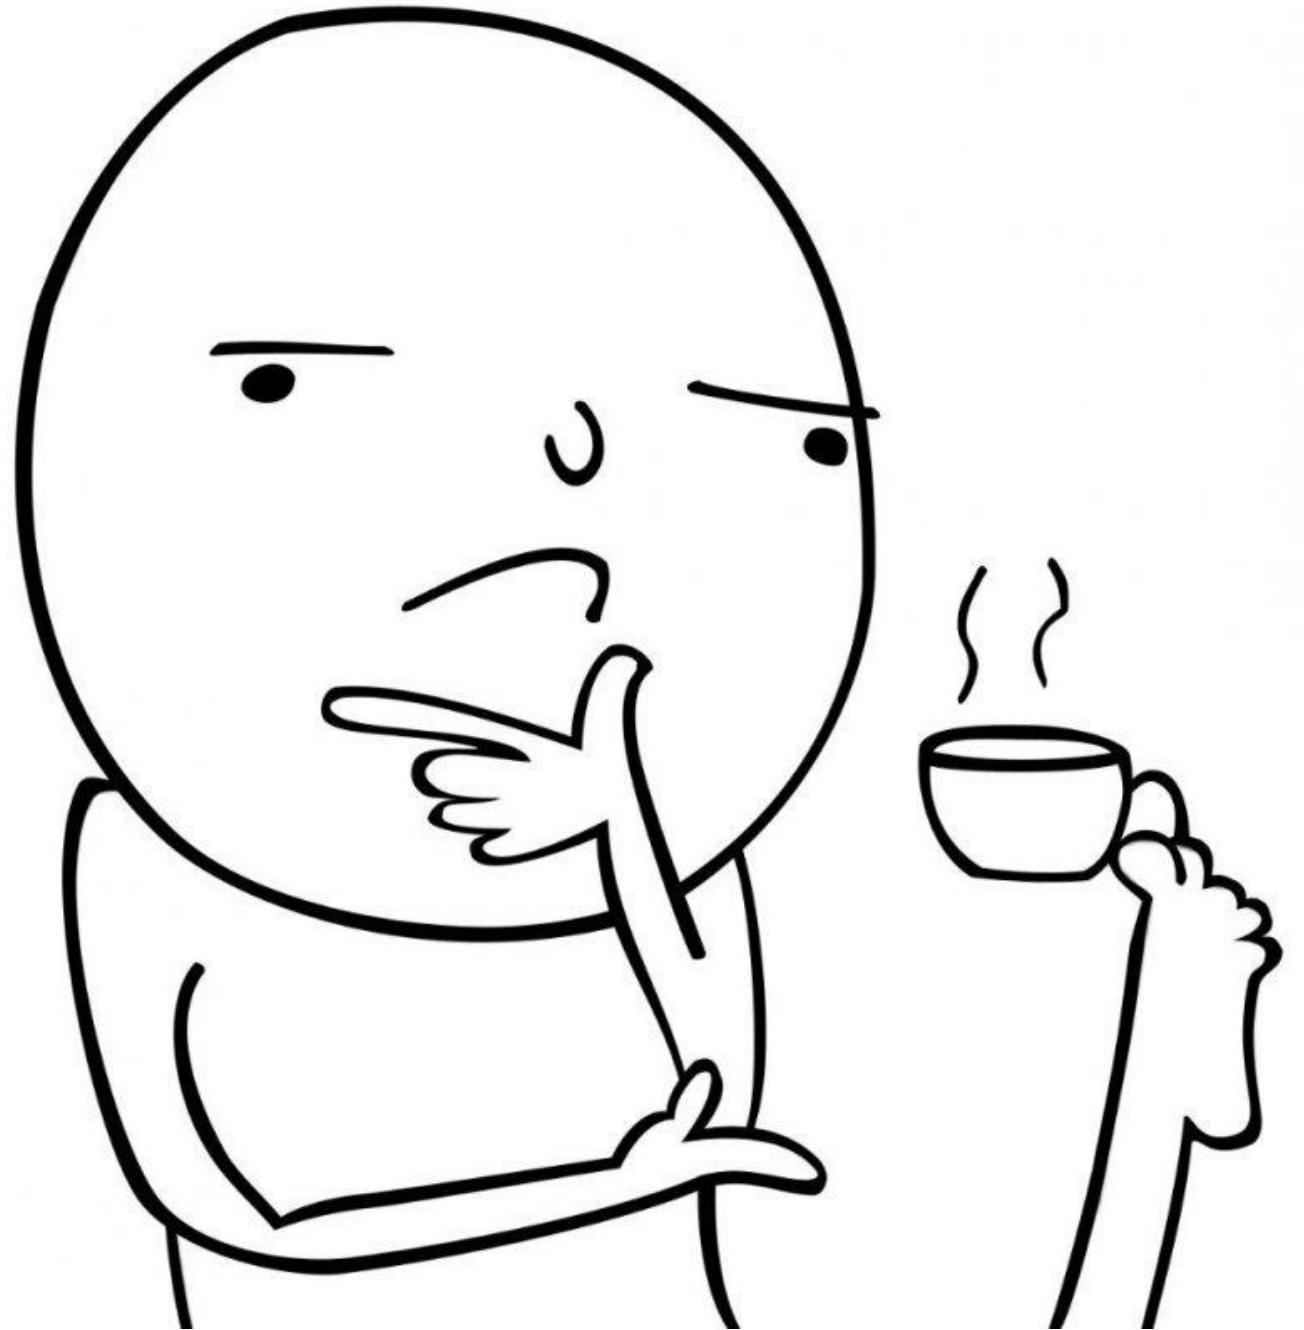

Gases can stay in
the atmosphere
for at least 50
years and even up
to centuries

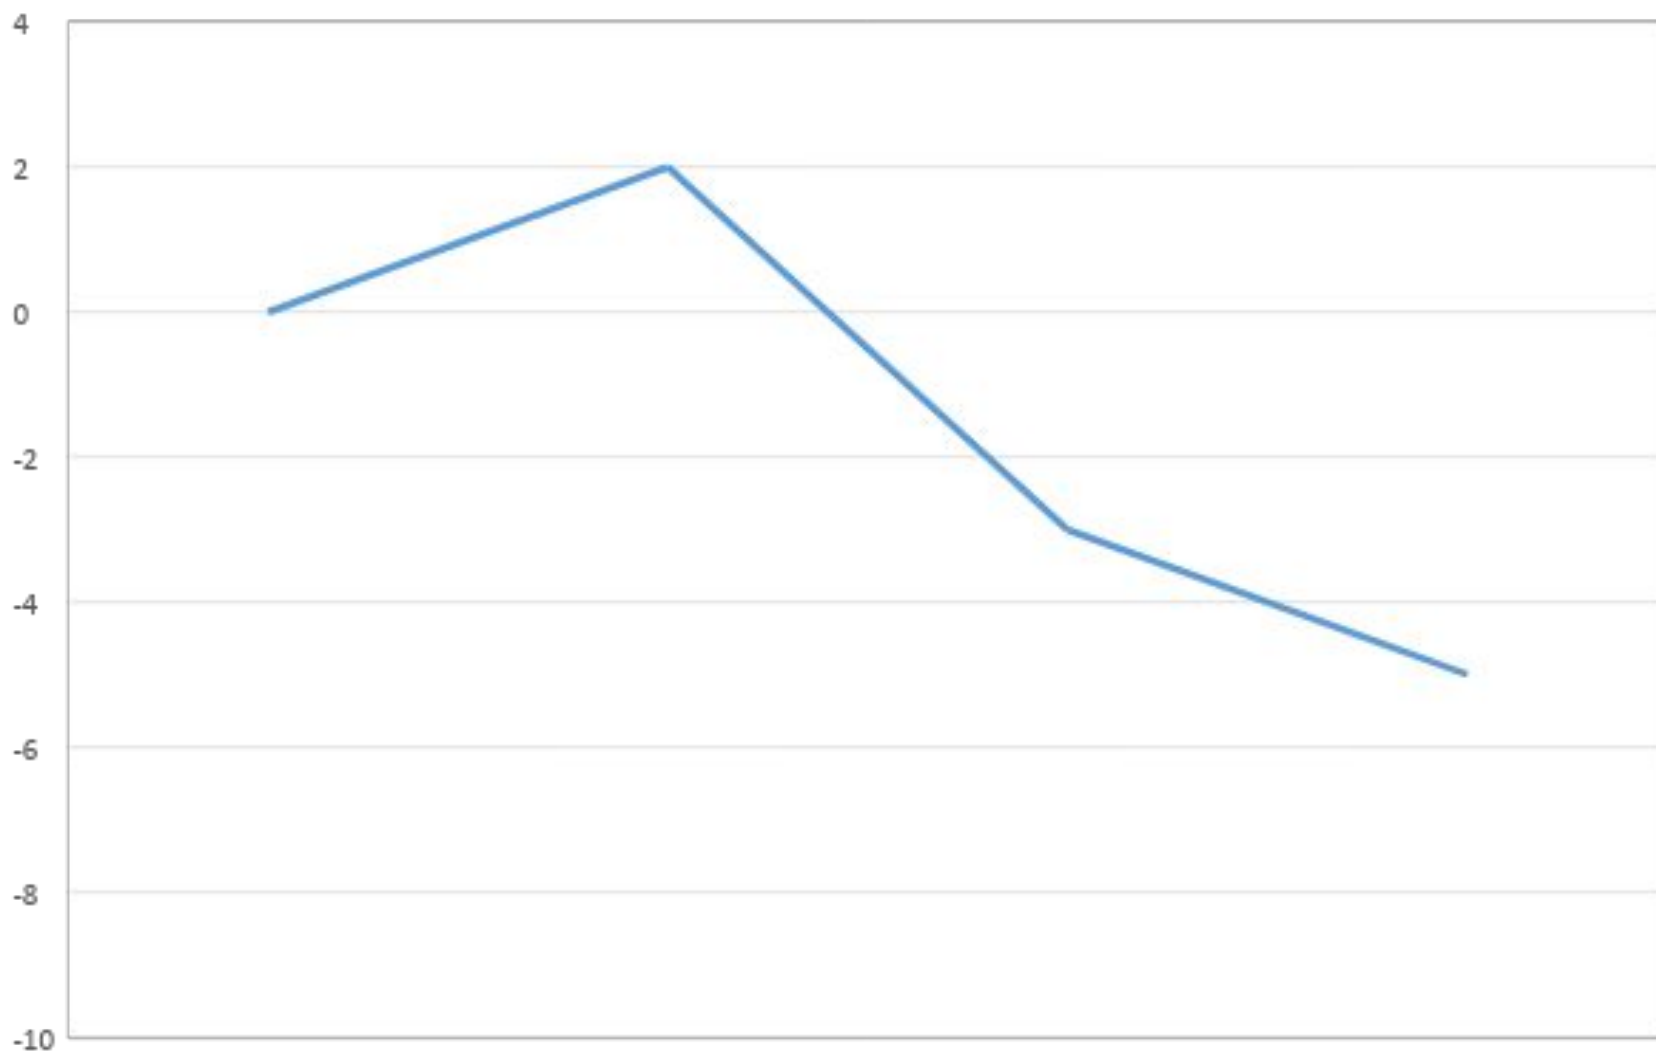

The globe is heating up

Is it a big
difference?
Let's
consider this

Temperature change in last 100 thousand years

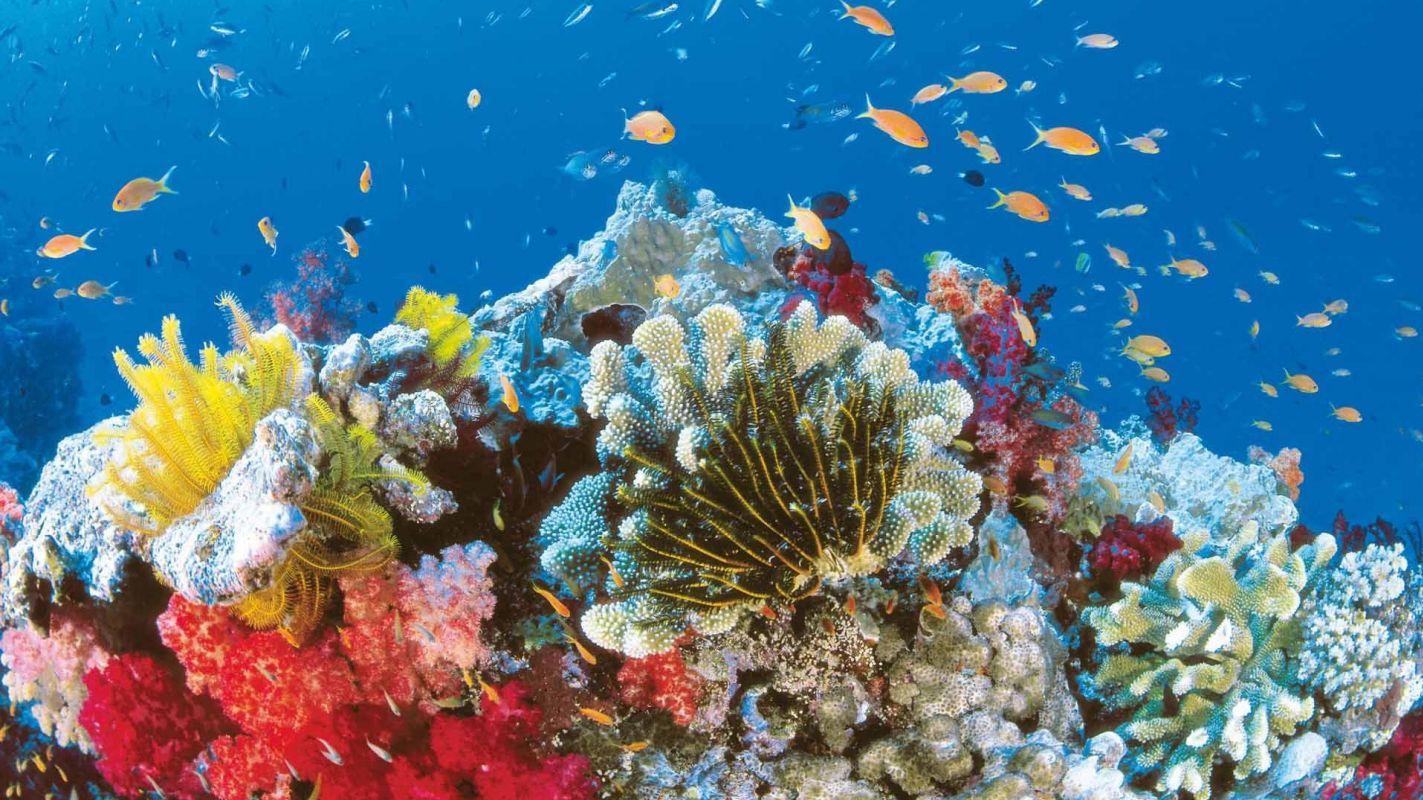

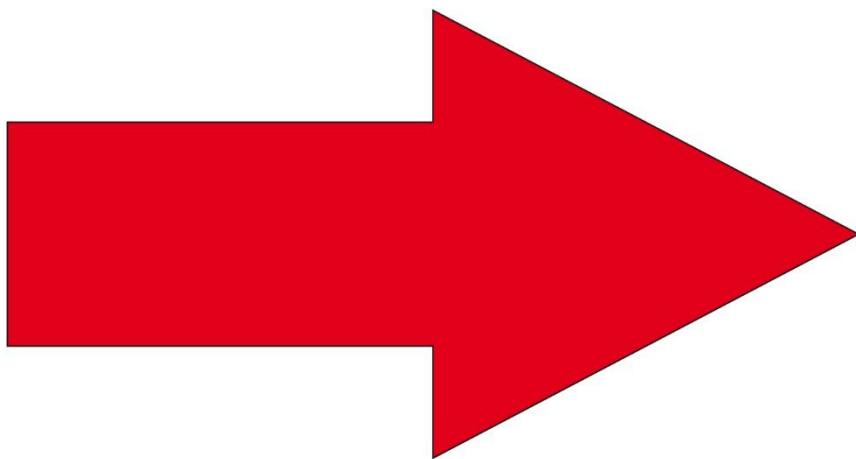

Ice is rapidly
disappearing

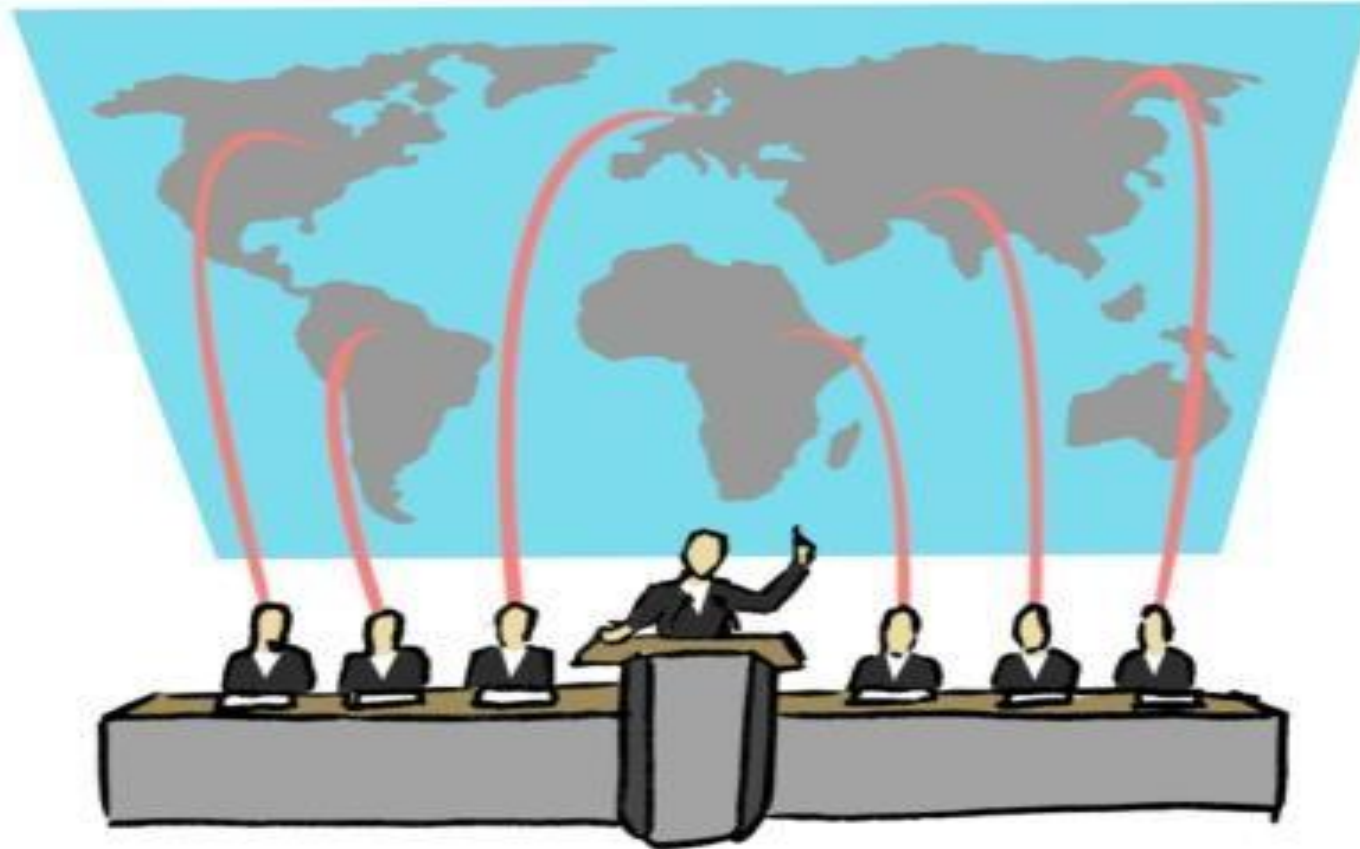

Mountains
are melting

Coral reefs

Paris Climate Summit

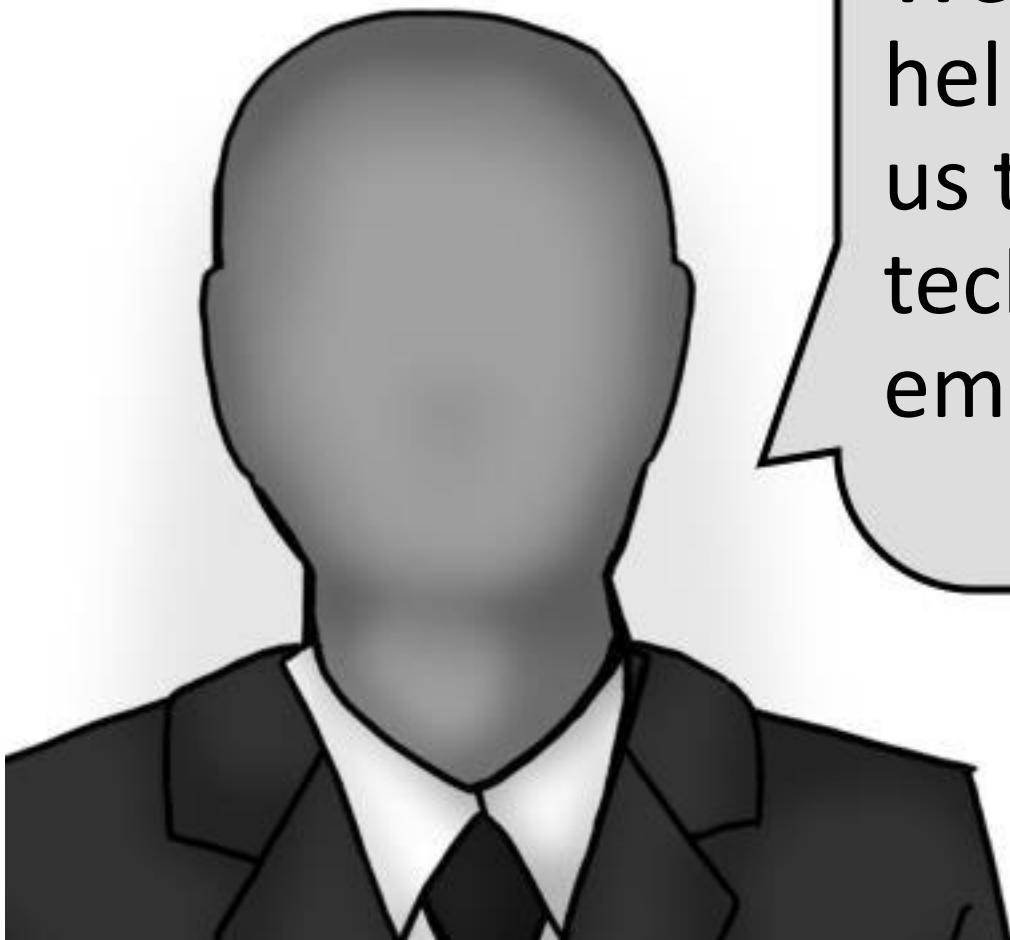

The heads of state or government of more than **100** countries

We will cut our emissions by 40%, compared with 1990 levels, till 2030

We will cut our emissions by 28%, compared with levels, till 2025

We need financial help that will enable us to invest in clean technology to cut our emissions

THANK YOU
