

# GLOBAL WARMING G

The atmosphere already has  
a natural supply of  
“greenhouse gases”

They capture heat and keep Earth  
warm enough for us to live in

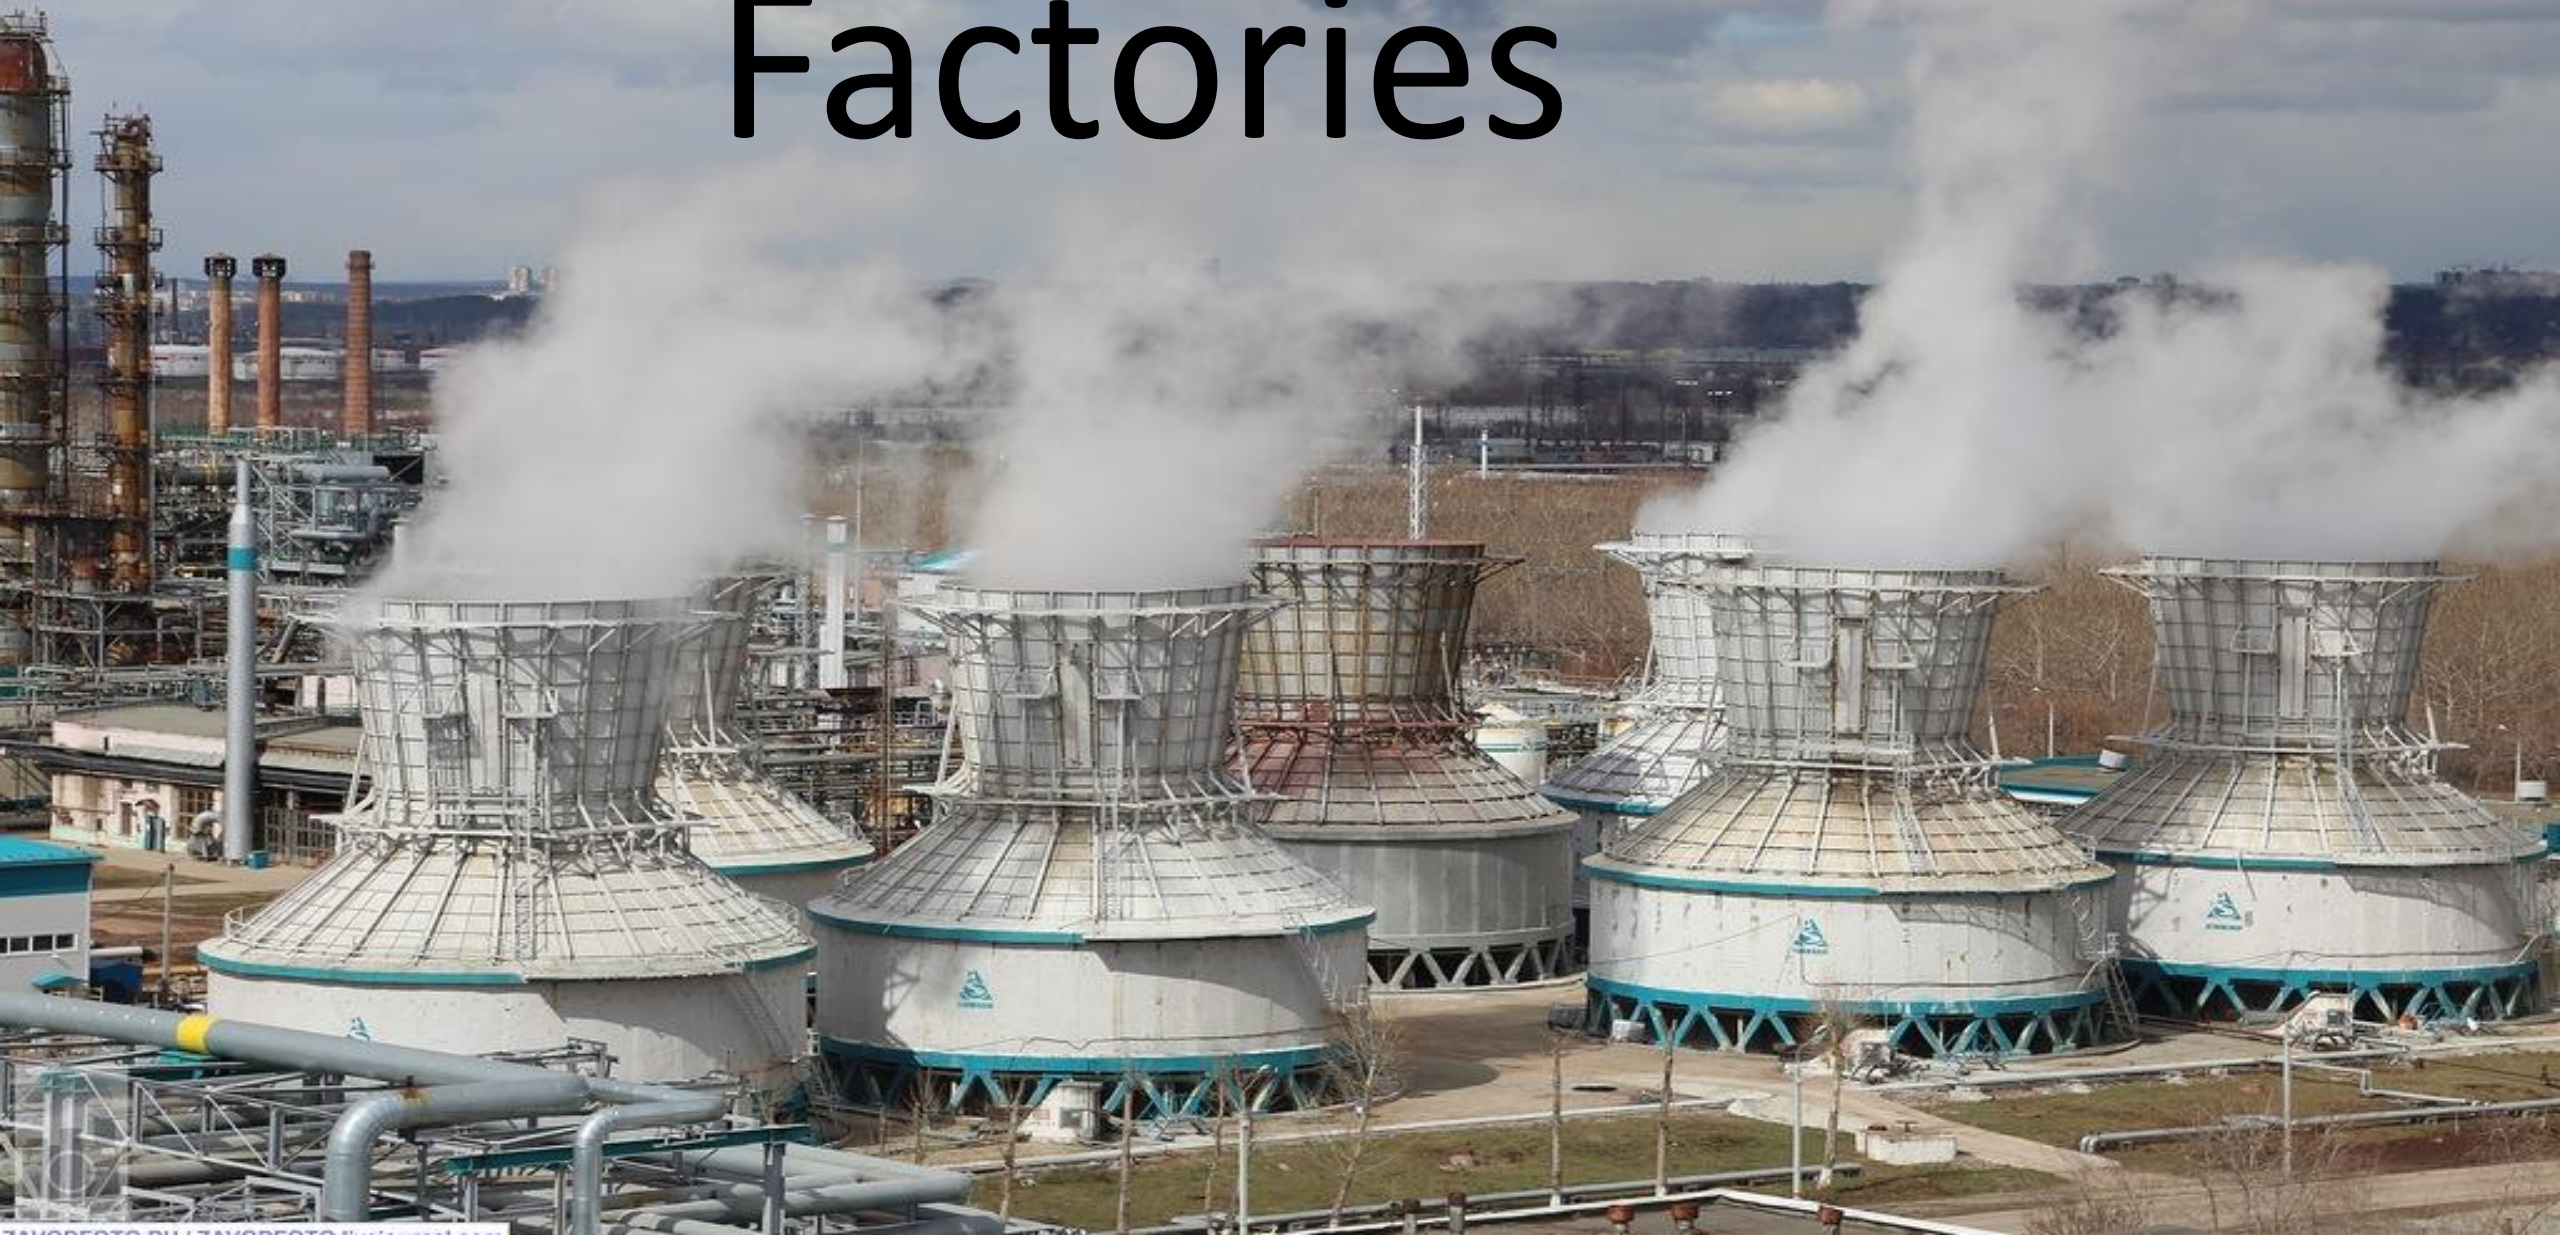

uninhabitable frozen wasteland

# Factories

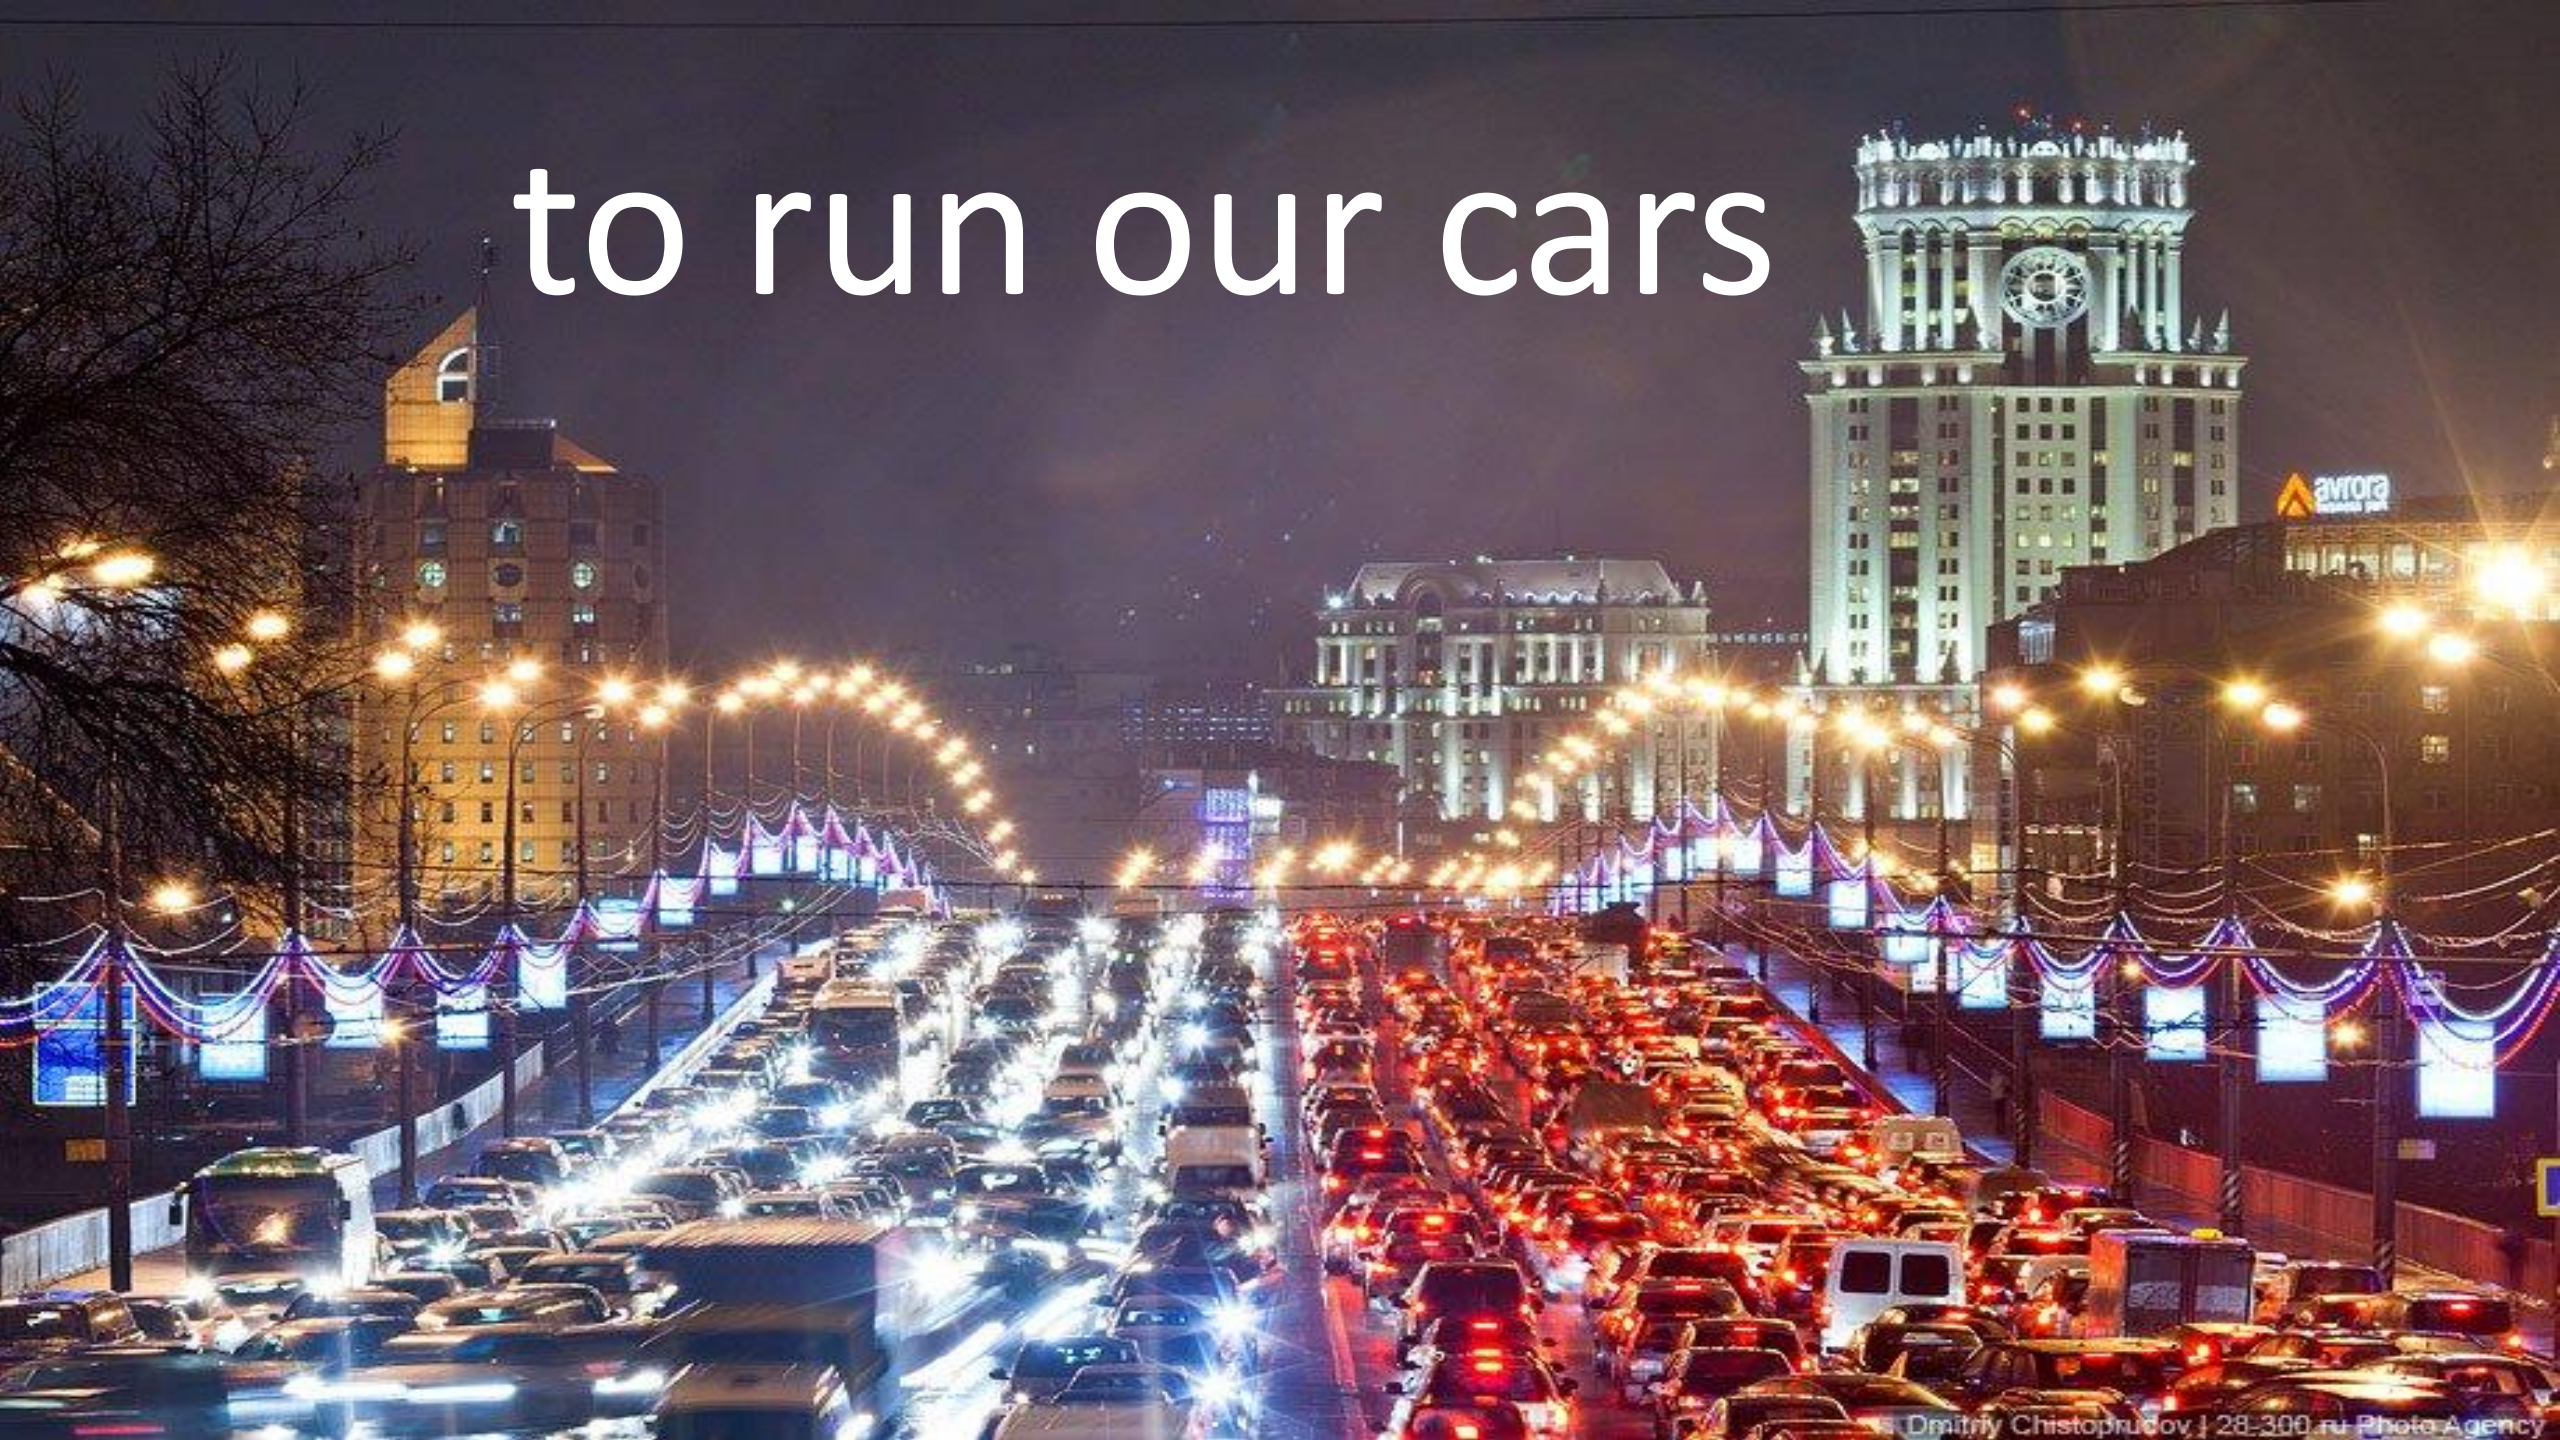

# Burn more and more

# fossil fuels

to run our cars

# Planes

Gases can stay in  
the atmosphere  
for at least 50  
years and even up  
to centuries

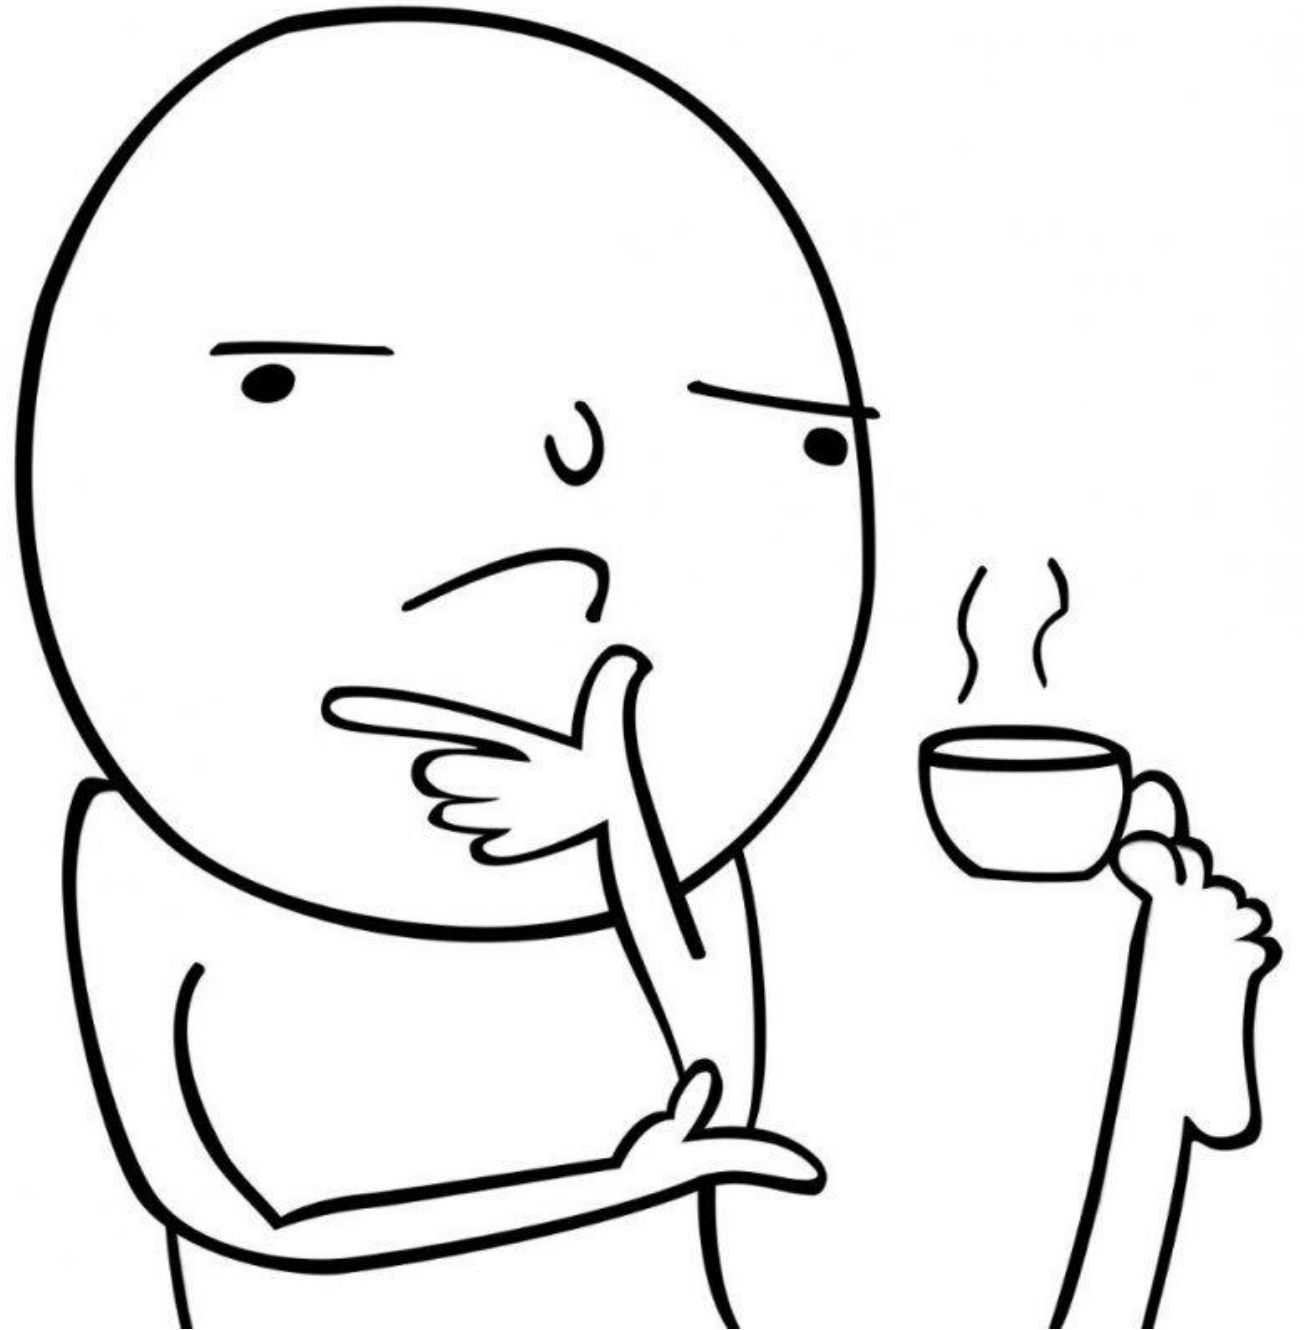

The globe is  
heating up

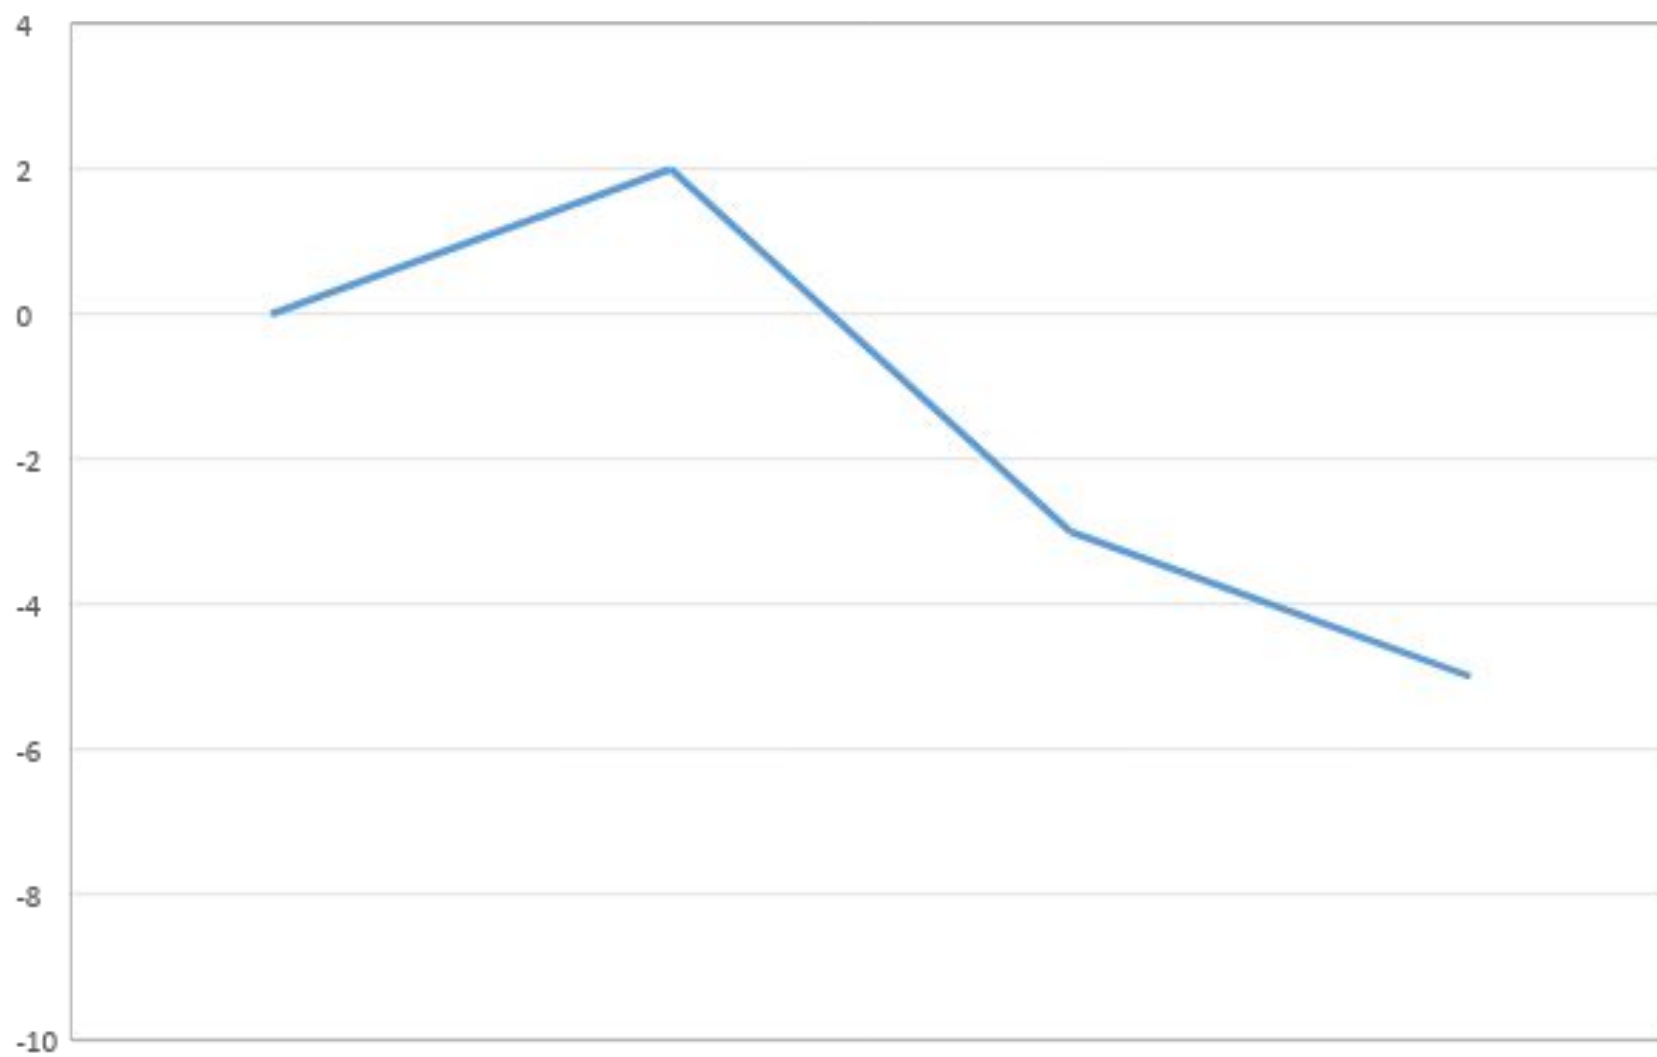

Is it a big  
difference?  
Let's  
consider this

## Temperature change in last 100 thousand years

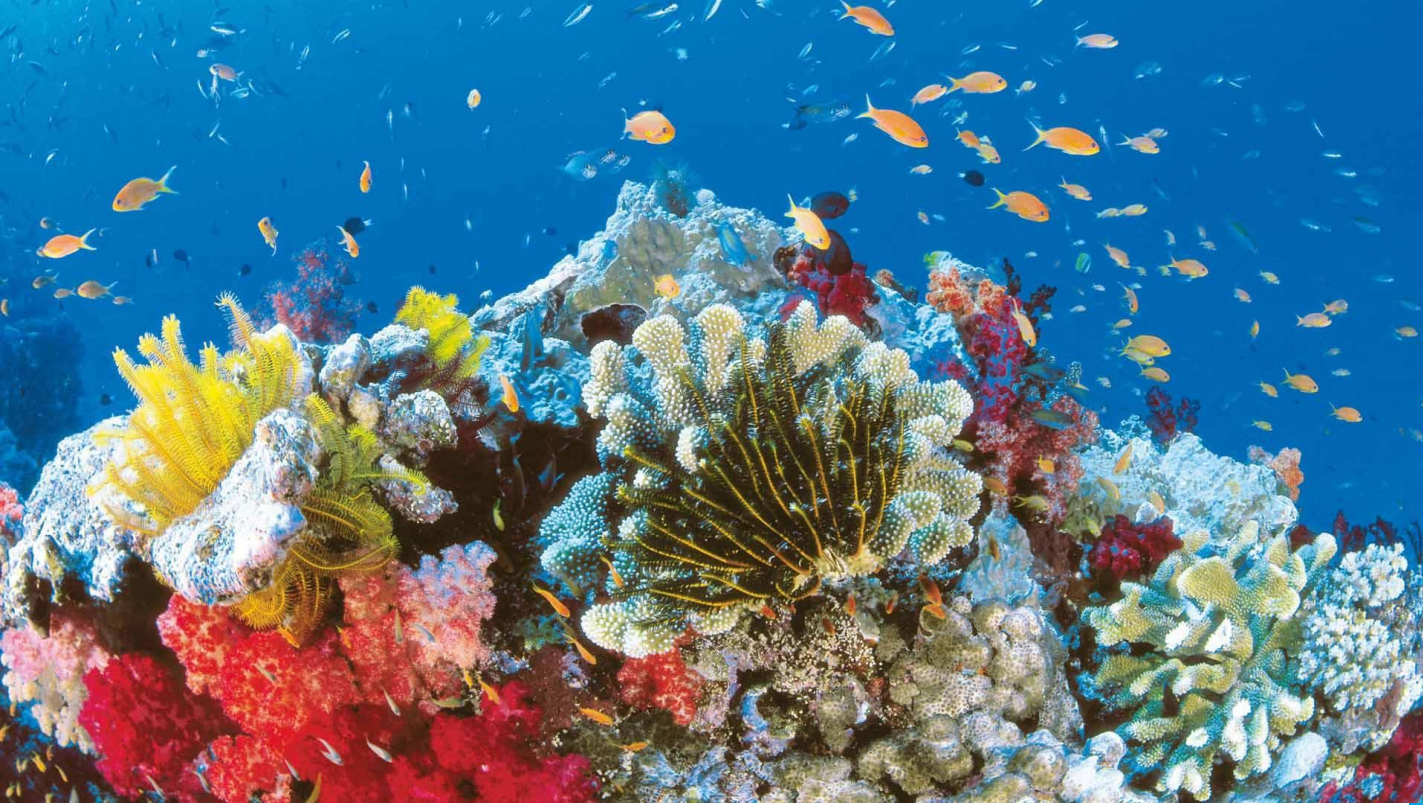

Ice is rapidly  
disappearing

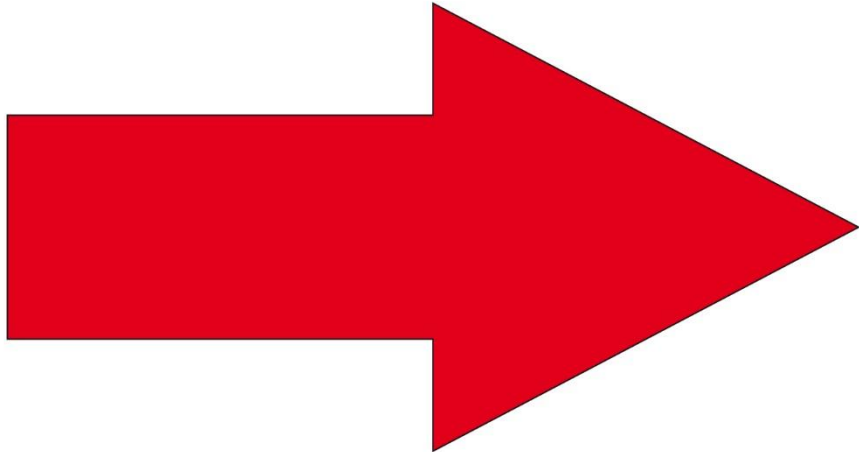

Mountains  
are melting

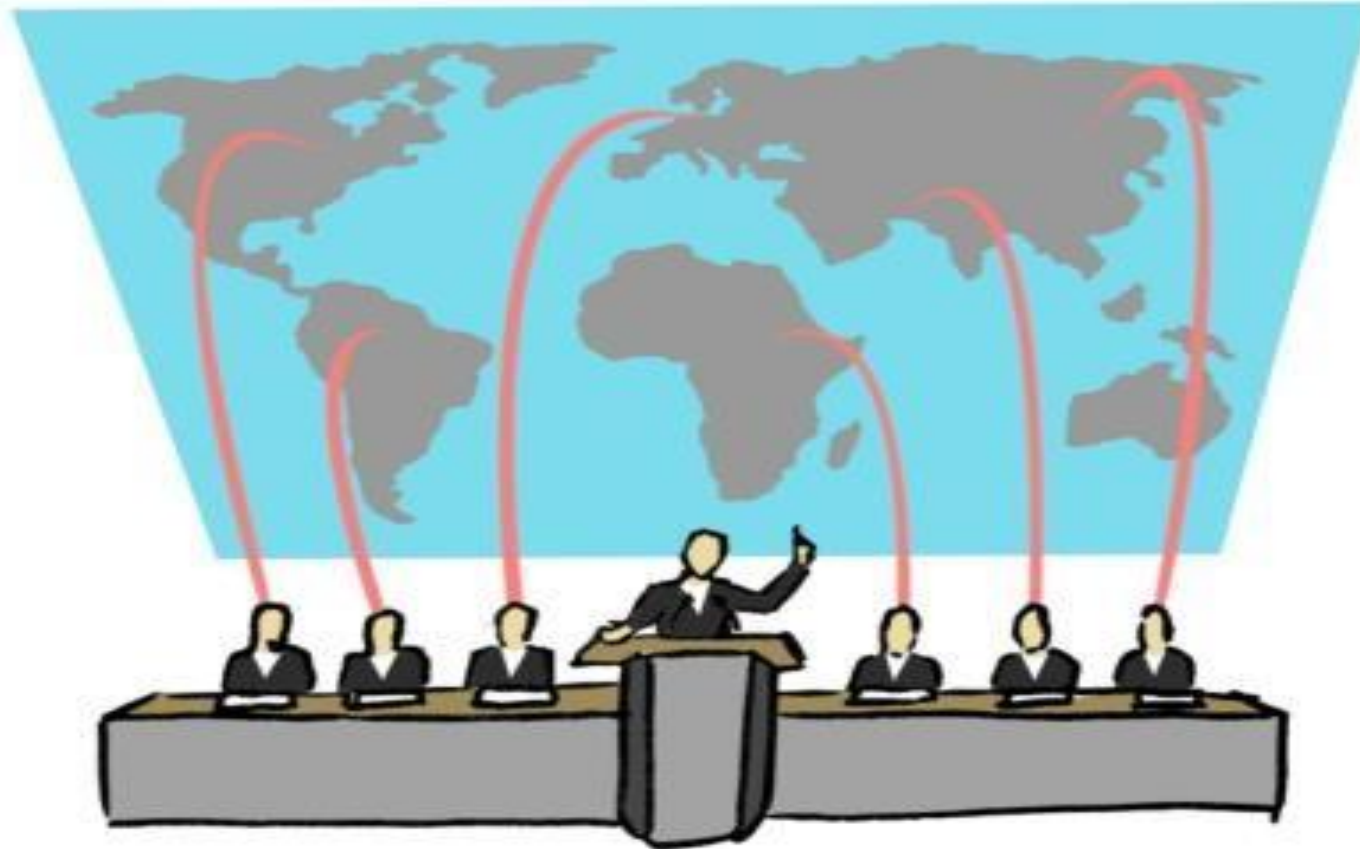

# Coral reefs

# Paris Climate Summit

The heads of state or government of more than **100** countries

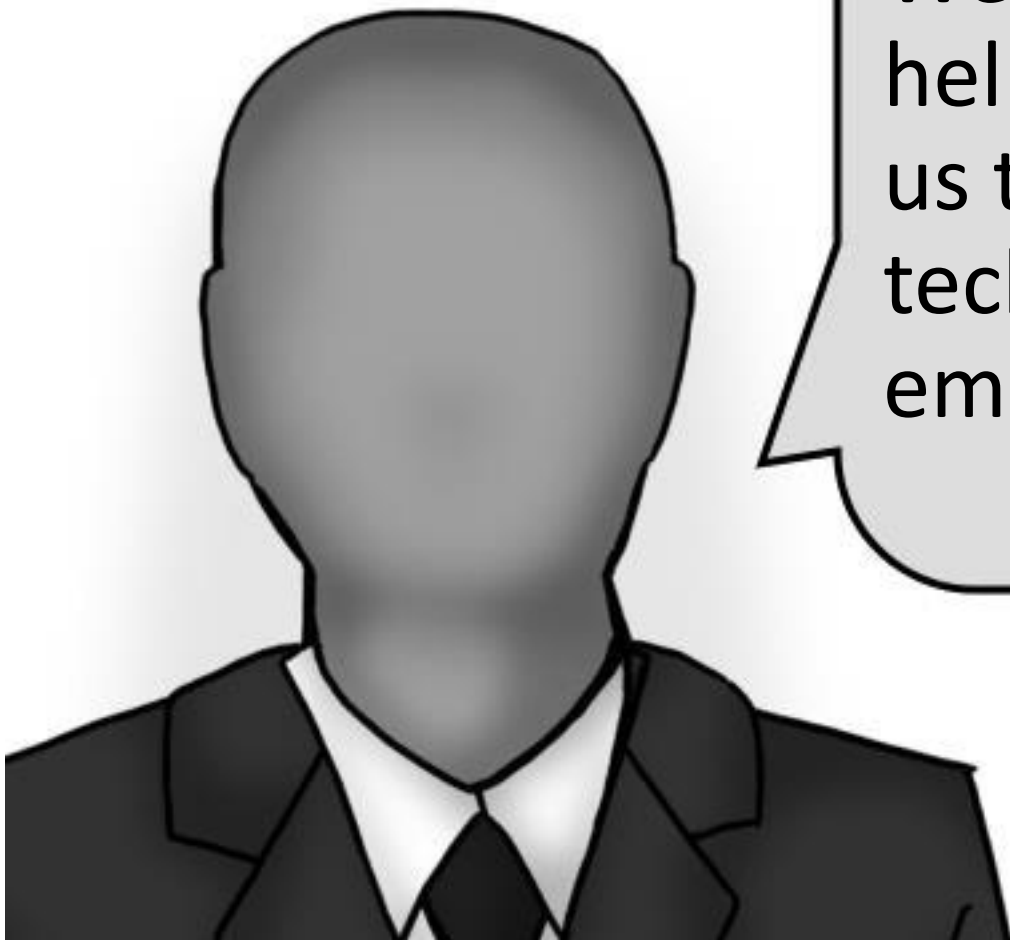

We will cut our emissions by 40%, compared with 1990 levels, till 2030

We will cut our emissions by 28%, compared with levels, till 2025

We need financial help that will enable us to invest in clean technology to cut our emissions

**THANK YOU**
